

Ekinops Network Management Platform

The Multi-Protocol Service Network Manager

Norbert Gulczynska, Ekinops

ETHERNET, SONET/SDH, FIBER CHANNEL, UNCOMPRESSED HD/SD-SDI/ASI VIDEO FLEXIBLE MULTI-PROTOCOL AGGREGATION

- Single Manager for all services and protocols
 Ethernet, SONET/SDH, Fiber Channel, etc.
- Full Redundant, Carrier Class, Scalable Network Management System
- Full Element Level and Service Level Fault, Configuration, Accounting, and Performance
 - ⇒ Detailed Network Element Inventory (M.3100)
- Robust Security and Authentification
- Element, Network, and Service Level Management
 Service Level Provisioning and Monitoring for all protocols

Benefits of the Ekinops Solution

- Quick deterministic fault isolation based on graphical displays of circuits vs. alarms
- Quick identification of "Effected" customers enabled by
 - ⇒ Circuit level alarm display
 - ⇒ Ability to identify effected circuits in the event of an NE failure or facility failure
 - ⇒ Correlation of circuits to customers
- Ability to figure out "Effected" circuits proactively before a planned network outage
- Proactive management of SLAs via SLA thresholding

Architectural Overview

- Distribution of NE Pollers, Database, Clients, and Server for Scalability
- Windows and Linux Support for client and server
- Database Replication for hot stand-by system redundancy
- Robust Database support: MySQL, Oracle, SQL Server, PostgreSQL

Server Clustering

- Pollers can be distributed for Performance
- Pollers take over for pollers that go down
- Server Processes that fail are restarted and moved to another server
 Page 5

Alarms and Topology

Alarm Correlation for diagnostic Simplification
 Operator Acknowledgement for alarm tracking
 Of course, filtering and historical logging

Alarm and Event Viewer

 Alarm and Event Viewer
 Flexible Filtering and Customization
 Single Line for Life Cycle of Alarm Ekinops Proprietary information

Robust Alarm Filtering

Alarm filtering by:

- network element
- managed object
- probable cause
- severity
- alarm type
- alarm state
- acknowledge state
- timestamps

- Software and Configuration Activity is tracked via Command viewer
- Commands can be for one or more network elements
- Commands can be issued immediately or queued to be issued at a later date/time
- Command status shown in hierarchy Ekinops Proprietary information

Inventory And Performance

M.3100 Equipment Browser

Of course, inventory and performance data logged in SQL database and exportable... along with other statistics collected by the manager

Inventory Views

Inventory hierarchy based on M.3100 Model

Page 16

NMS Security

- Robust and Granular Feature Based Security Management
- Configuration Logs at the manager and the NE, NE Logs kept historically on manager

Operator Security

Networks can be divided into domains and users assigned to domains

Users can be assigned to domains, Distinct security profiles can be created Page 18 for domains

Wavelengths traverse spans and client services ride wavelengths

Topological Links

Topological Links are added with the service level management capability

⇒ Just like NEs, links have administrative, operational, and alarm status

Service Creation

Main Alarm Display will also have a service tree for quick and easy alarm to service correlation

End-To-End Provisioning

□ End-To-End, Automatically Routed

- ⇒ Pick End Points Only
- ⇒ User similar dialogs to service creation dialogs
 - If service is provisioned using MPSN, it will automatically be created in the monitoring application
- A list of possible routes will be displayed allowing the user to select

Thank you
