### 4.2. Measuring Standard

EN62040-2: 2006 Category C3

Power Line Conducted Emission Limits (C3)

UPS rated output current A	Frequency range MHz	Limits dB ( $\mu$ V)	
		Quasi-peak	Average
>16 – 100	0,15 to 0,50 <sup>b</sup>	100	90
	0,50 to 5,0 <sup>b</sup>	86	76
	5,0 to 30,0	90 to 70 <sup>a</sup>	80 to 60 <sup>a</sup>

	0,50 to 5,0 <sup>b</sup>	125	115
	5,0 to 30,0	115	105

<sup>a</sup> The limits decrease linearly with the logarithm of the frequency.  
<sup>b</sup> The lower limit shall apply at the transition frequency.

### 4.3. EUT Configuration on Measurement

The following equipments are installed on Conducted Emission Measurement to meet EN62040-2 requirements and operating in a manner which tends to maximize its emission characteristics in a normal application.

EUT : Uninterruptible Power Systems  
 Model Number : RM090/15X  
 Serial Number : N/A

#### 4.4.Operating Condition of EUT

- 4.4.1.Setup the EUT as shown on Section 4.1.
- 4.4.2.Turn on the power of all equipments.
- 4.4.3.Let the EUT work in measuring mode (AC mode/Battery mode) and measure it.

#### 4.5.Test Procedure

The EUT is put on the plane 0.8m high above the ground by insulating support and connected to the AC mains through Line Impedance Stability Network (L.I.S.N). This provided a 50ohm coupling impedance for the tested equipments. Both sides of AC line are investigated to find out the maximum conducted emission according to the EN62040-2 regulations during conducted emission measurement.

The bandwidth of the field strength meter (R&S Test Receiver ESCS30) is set at 9KHz in 150KHz~30MHz and 200Hz in 9KHz~150KHz.

The frequency range from 150kHz to 30MHz is investigated

All the scanning waveform is put in Appendix I.

#### 4.6.Measuring Results

**PASS.**

Please reference to the following page.

## 5. RADIATED EMISSION MEASUREMENT

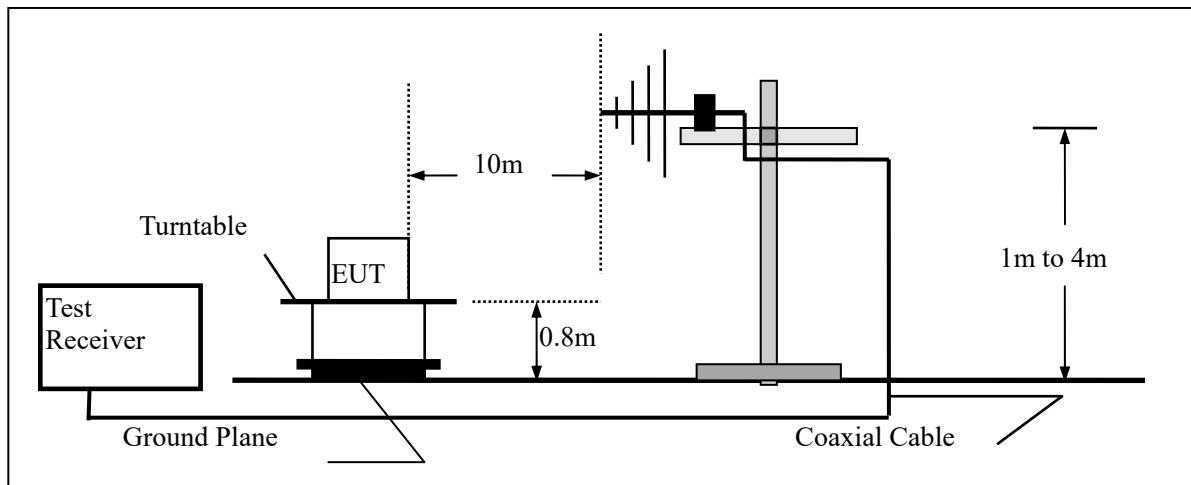

### 5.1. Block Diagram of Test

5.1.1. Block diagram of connection between the EUT and simulators.

(EUT: Uninterruptible Power Systems)

5.1.2. Block diagram of test setup (In chamber)

(EUT: Uninterruptible Power Systems)

### 5.2. Measuring Standard

EN62040-2: 2006 Category C3

### 5.3.Radiated Emission Limits

EN62040-2: 2006 Category C3 Limits:

All emanations from a C3 device or system, including any network of conductors and apparatus connected thereto, shall not exceed the level of field strengths specified below:

FREQUENCY (MHz)	DISTANCE (Meters)	FIELD STRENGTHS LIMIT (dB $\mu$ V/m)
30 ~ 230	10	50
230 ~ 1000	10	60

- Note:
- (1) The smaller limit shall apply at the combination point between two frequency bands.
  - (2) Distance refers to the distance in meters between the measuring instrument antenna and the closed point of any part of the EUT.

### 5.4.EUT Configuration on Test

The EN62040-2 regulations test method must be used to find the maximum emission during radiated emission measurement.

### 5.5.Operating Condition of EUT

5.5.1.Turn on the power.

5.5.2.After that, let the EUT work in test mode (AC mode/Battery mode) and measure it.

### 5.6.Test Procedure

The EUT is placed on a turn table which is 0.8 meter high above the ground. The turn table can rotate 360 degrees to determine the position of the maximum emission level. The EUT is set 10 meters away from the receiving antenna which is mounted on a antenna tower. The antenna can be moved up and down from 1 to 4 meters to find out the maximum emission level. Bilog antenna (calibrated by Dipole Antenna) is used as a receiving antenna. Both horizontal and vertical polarization of the antenna are set on test.

The bandwidth of the Receiver is set at 120kHz.

All the scanning curves are attached in Appendix II.

### 5.7.Measuring Results

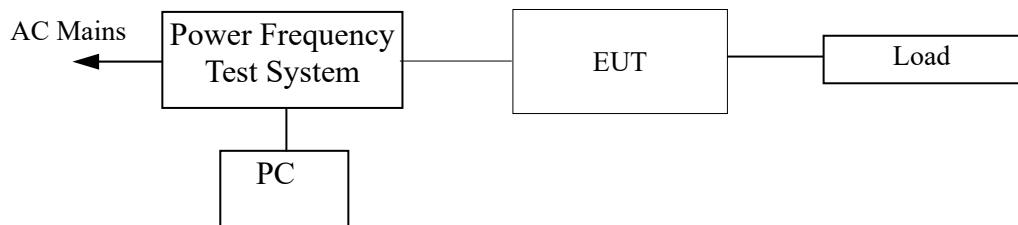

**PASS.**

The frequency range from 30MHz to 1000MHz is investigated.

Please reference to Appendix II.

## 8.4.EUT Configuration

The configuration of EUT is listed in Section 4.3.

## 8.5.Operating Condition of EUT

Same as conducted emission measurement, which is listed in Section 4.4. Except the test set up replaced by Section 8.1.

## 8.6.Test Procedure

This test is done on a non-conductive surface. The round discharge tip of the discharge electrode shall be approached as fast as possible to touch the EUT. After each discharge, the discharge electrode shall be removed from the EUT. The generator is then re-triggered for a new single discharge and repeated 10 times for each pre-selected test point. This procedure shall be repeated until all the air discharge completed.

### 8.6.2.Contact Discharge:

All the procedure shall be same as Section 8.6.1. Except that the tip of the discharge electrode shall touch the EUT before the discharge switch is operated.

### 8.6.3.Indirect discharge for horizontal coupling plane

At least 10 single discharges (in the most sensitive polarity) shall be applied at the front edge of each HCP opposite the center point of each unit (if applicable) of the EUT and 0.1m from the front of the EUT. The long axis of the discharge electrode shall be in the plane of the HCP and perpendicular to its front edge during the discharge.

### 8.6.4.Indirect discharge for vertical coupling plane

At least 10 singles discharge (in the most sensitive polarity) shall be applied to the center of one vertical edge of the coupling plane. The coupling plane, of dimensions 0.5m X 0.5m, is placed parallel to, and positioned at a distance of 0.1m from the EUT.
