Chapter 1 LLDP Configuration Commands

1.1 LLDP Commands

1.1.1 lldp run

Syntax

To enable LLDP, run **lldp run**; to disable LLDP, run **no lldp run**.

lldp run

no lldp run

Parameters

None

Default Value

The debugging switch is disabled.

Usage Guidelines

The port will send lldp packets after the lldp function is enabled.

Command Mode

Global configuration mode

Example

The following command is used to enable LLDP.

```
switch_config# lldp run
```

1.1.2 lldp holdtime

Syntax

To configure the ttl value of LLDP, run lldp holdtime time. To resume the default transmission delay, run no lldp holdtime.

lldp holdtime time

no lldp holdtime

Parameters

Parameters	Description
<i>time</i>	Holddate of the to-be-transmitted packet Range: 0-65535 seconds

Default Value

120s

Usage Guidelines

In normal condition, the remote information stored in MIB will update before aging. But the frame may loss in sending and causes the information ages. For avoiding this, you need to set the value of TTL and ensure the update LLDP frame is forwarded time after time.

Command Mode

Global configuration mode

Example

The following example shows how to set the ttl value of LLDP to 100 seconds.

```
switch_config# lldp holdtime 100  
switch_config#
```

1.1.3 lldp timer

Syntax

To configure the transmission delay of LLDP, run lldp timer time. To resume the default transmission delay, run no lldptimer.

lldp timer time

no lldp timer

Parameters

Parameters	Description
<i>time</i>	Interval for LLDP to transmit the packets Range: 5-65534 seconds

Default Value

30s

Usage Guidelines

The transmission interval of the LLDP message must be shorter than its storage time, ensuring multiple updates in the storage time and preventing error which is led by packet loss.

Command Mode

Global configuration mode

Example

The following example shows how to configure the transmission interval of LLDP to 24 seconds.

```
switch_config# lldp timer 24  
switch_config#
```

1.1.4 lldp reinit

Syntax

To configure the transmission delay of LLDP, run **lldp reinit time**. To resume the default transmission delay, run **no lldp reinit**.

lldp reinit time**no lldp reinit**

Parameters

Parameters	Description
<i>time</i>	Transmission delay of LLDP, whose values range from two to five seconds Range: 2-5 seconds

Default Value

2 s

Usage Guidelines

LLDP information will be forwarded automatically in two conditions: first, the status or value of one or more information elements (management objects) change; second, the sending timer timeouts. A single information change cause the LLDP packet is forwarded and a series of information change may cause many LLDP frames forwarded, but a frame can only report one change. For avoiding this, the web management defines the interval of two continuous LLDP frames.

Command Mode

Global configuration mode

Example

The following example shows how to set the transmission delay of LLDP to five seconds.

```
switch_config# lldp reinit 5  
switch_config#
```

1.1.5 lldp tlv-select

Syntax

To add TLV which is transmitted by the LLDP message, run **lldp med-tlv-select tlv-type**. To delete TLV which is transmitted by the LLDP message, run **no lldp med-tlv-select tlv-type**.

lldp tlv-select tlv-type

no lldp tlv-select tlv-type

Parameters

Parameters	Description	
<i>tlv-type</i>	Stands for TLV that are available for selective transmission. Its values are: management-address management address TLV port-description port description TLV system-capabilities system-capabilities TLV system-description system description TLV	

	system-name	system name TLV
--	-------------	-----------------

Default Value

All TLVs are sent.

Usage Guidelines

Three mandatory TLVs must be sent.

Command Mode

Global configuration mode

Example

The following example shows how to enable the port description not to be transmitted in the message.

```
switch_config#no lldp tlv-select port-description
switch_config#
```

1.1.6 lldp dot1-tlv-select

Syntax

To add TLV which is transmitted by the LLDP message, run `lldp med-tlv-select tlv-type`. To delete TLV which is transmitted by the LLDP message, run `no lldp med-tlv-select tlv-type`.

lldp dot1-tlv-select tlv-type

no lldp dot1-tlv-select tlv-type

Parameters

Parameters	Description
<i>tlv-type</i>	Stands for TLV that are available for selective transmission. Its values are: port-vlan-id port vlan address TLV protocol-vlan-id port and protocol VLAN ID TLV vlan-name vlan名TLV

Default Value

All TLVs are sent.

Usage Guidelines

The TLV of the protocol identity does not support transmission but supports reception.

Command Mode

Port configuration mode

Example

The following example shows how to enable the TLV not to be transmitted by deletion of the VLAN address of a port in the transmitted packet.

```
switch_config#int g0/1
switch_config_g0/1#no  lldp  dot1-tlv-select    port-vlan-id
switch_config_g0/1#
```

1.1.7 lldp dot3-tlv-select

Syntax

To add TLV which is transmitted by the LLDP message, run **lldp med-tlv-select tlv-type**.
To delete TLV which is transmitted by the LLDP message, run **no lldp med-tlv-select tlv-type**.

lldp dot3-tlv-select tlv-type

no lldp dot3-tlv-select tlv-type

Parameters

Parameters	Description
<i>tlv-type</i>	Stands for TLV that are available for selective transmission. Its values are: link-aggregation link aggregation TLV macphy-config MAC/Phy configuration/status TLV max-frame-size max frame size TLV power Power Via MDI TLV

Default Value

All TLVs are sent.

Usage Guidelines

None

Command Mode

Port configuration mode

Example

The following example shows how to enable the TLV not to be transmitted by deletion of the MAC/Phy configuration/status of a port in the transmitted packet.

```
switch_config#int g0/1  
switch_config_g0/1#no lldp dot3-tlv-select macphy-config  
switch_config_g0/1#
```

1.1.8 lldp med-tlv-select

Syntax

To add TLV which is transmitted by the LLDP message, run **lldp med-tlv-select tlv-type**. To delete TLV which is transmitted by the LLDP message, run **no lldp med-tlv-select tlv-type**.

lldp med-tlv-select tlv-type

no lldp med-tlv-select tlv-type

Parameters

Parameters	Description	
<i>tlv-type</i>	Stands for TLV that are available for selective transmission. Its values are:	
	network-policy	network policy TLV
	inventory	inventory management TLV
	location	location identification TLV
	power-management	expand Power Via MDI TLV

Default Value

All TLVs are sent.

Usage Guidelines

By default, the TLV of MED cannot be transmitted. When the TLV of MED need be transmitted, the MED capability TLV must be transmitted. Hence it does not fall into the choice.

Command Mode

Port configuration mode

Example

The following example shows how to enable the TLV not to be transmitted by deletion of the detailed list management in a transmitted packet.

```
switch_config#int g0/1  
switch_config_g0/1#no lldp med-tlv-select inventory  
switch_config_g0/1#
```

1.1.9 lldp transmit

Syntax

lldp transmit

no lldp transmit

To set the port to send the LLDP message, run **lldp transmit**. To forbid receiving the LLDP message, run **no lldp transmit**.

Parameters

None

Default Value

Transmittable LLDP message mode

Usage Guidelines

Only after the LLDP module is enabled can the command be valid.

Command Mode

Port configuration mode

Example

The following example shows how to set port g0/1 not to send the LLDP message.

```
switch_config_g0/1# no lldp transmit  
switch_config_g0/1#
```

1.1.10 lldp receive

Syntax

lldp receive

no lldp receive

To set the port to the receivable LLDP message mode, run lldp receive. To forbid receiving the LLDP message, run no lldp receive.

Parameters

None

Default Value

Receivable LLDP message mode

Usage Guidelines

Only after the LLDP module is enabled can the configuration be valid.

Command Mode

Port configuration mode

Example

The following example shows how to set port g0/1 not to receive the LLDP message.

```
switch_config_g0/1# no lldp receive  
switch_config_g0/1#
```

1.1.11 lldp management-ip

Syntax

lldp management-ip A.B.C.D

no lldp management-ip

To configure the management address of the LLDP port, run lldp management-ip A.B.C.D. To resume the default transmission delay, run no lldp management-ip.

Parameters

Parameters	Description
A.B.C.D	Stands for the management IP address that will be specified.

Default Value

The default management address is the IP address of the VLAN interface that pvid corresponds to; if this IP address does not exist, the default management address is 0.0.0.0.

Usage Guidelines

The configured management IP address should be the IP address related with a port.

Command Mode

Port configuration mode

Example

The following example shows how to set the management IP address of port g0/1 to 90.0.0.99.

```
switch_config_g0/1# lldp management-ip 90.0.0.99  
switch_config_g0/1#
```

1.1.12 lldp trap-send

Syntax

lldp trap-send llfp-mib

To forward trap notification to llfp mib, run this command.

lldp trap-send ptopo-mib

To forward trap notification to ptopo mib, run this command.

Parameters

None

Default Value

None

Usage Guidelines

None

Command Mode

Global configuration mode

Example

The following example shows how to send trap notification to lldp mib.

```
switch_config#lldp trap-send lldp-mib
```

```
switch_config#
```

The following example shows how to send trap notification to ptopo mib.

```
switch_config#lldp trap-send ptopo-mib
```

```
switch_config#
```

1.1.13 location elin identifier id WORD

Syntax

location elin identifier *id* WORD

no location elin identifier *id*

To add the elin information, run location elin identifier *id* WORD; to delete the elin information, run no location elin identifier *id*.

Parameters

Parameters	Description
<i>id</i>	Stands for the ID of the to-be-set elin, which ranges from 1 to 65535.
WORD	Stands for the content of the configured elin, which ranges from 10 to 25 bytes.

Default Value

None

Usage Guidelines

None

Command Mode

Global configuration mode

Example

The following example shows how to set the identifier to 1 and the content of elin to 1234567890.

```
switch_config# location elin identifier 1 1234567890
switch_config#
```

1.1.14 location civic identifier id

Syntax

location civic identifier *id*

no location civic identifier *id*

To enter the location configuration mode and set the civic information, run location civic identifier id. To delete the civic information, run no location civic identifier id.

Parameters

Parameters	Description
<i>id</i>	Stands for the ID of the to-be-set civic, which ranges from 1 to 65535.

Default Value

None

Usage Guidelines

After the system enters the location configuration mode, you can run the following commands to conduct the corresponding configuration to the civic of the ID.

Command	Purpose
(no) language WORD	Sets the language.
(no) state WORD	Sets the state's (provincial) name, such as shanghai.

(no) county WORD	Sets the name of a county.
(no) city WORD	Sets the name of a city.
(no) division WORD	Sets the name of a division.
(no) neighborhood WORD	Sets the name of neighborhood.
(no) street WORD	Sets the name of a street.
(no) leading-street-dir WORD	Sets the direction of a main street, such as N (north).
(no) trailing-street-suffix WORD	Sets the suffix of a small street, such as SW.
(no) street-suffix WORD	Sets the suffix of a street, such as platz.
(no) number WORD	Sets the street number, such as number 123.
(no) street-number-suffix WORD	Sets the suffix of the street number, such as number 1/2 of A road.
(no) landmark WORD	Sets the landmark, such as Colombia University.
(no) additional-location WORD	Sets the additional location.
(no) name WORD	Sets the information about a resident, such as Joe's haircut shop.
(no) postal-code WORD	Sets the postal code.
(no) building WORD	Sets the information about a building.
(no) unit WORD	Sets the information about a unit.
(no) floor WORD	Sets the information about a floor.
(no) room WORD	Sets the information about a room.
(no) type-of-place WORD	Sets the type of a place, such as office.
(no) postal-community WORD	Sets the name of a postal office.
(no) post-office-box WORD	Sets the name of a postal box, such as 12345.
(no) additional-code WORD	Sets the additional code.
(no) country WORD	Sets the name of a country.
(no) script WORD	Sets the script.

Command Mode

Global configuration mode

Example

The following example shows how to set the civic information of identifier 1.

```
Switch_config#location civic identifier 1
```

```
Switch_config_civic#language English
```

```
Switch_config_civic#city Shanghai
```

Switch_config_civic#street Curie
Switch_config_civic#script EN
Switch_config_civic#quit
Switch_config#

1.1.15 location elin/civic id

Syntax

location elin/civic *id*

no location elin/civic

To set the location for a port, run location elin/civic id. To delete the location of a port, run no location elin/civic id.

Parameters

Parameters	Description
<i>id</i>	Stands for the ID of the to-be-set elin/civic, which ranges from 1 to 65535.

Default Value

None

Usage Guidelines

None

Command Mode

Port configuration mode

Example

The following example shows how to set the elin and the civic for a port.

```
Switch_config#int g0/8
Switch_config_g0/8#location elin 1
Switch_config_g0/8#location civic 1
```

1.1.16 show lldp errors

Syntax

show lldp errors

To display the error information about the LLDP module, run this command.

Parameters

None

Default Value

None

Usage Guidelines

None

Command Mode

EXEC/global configuration mode

Example

The following example shows how to check the error information of lldp module.

```
switch_config#show lldp errors
LLDP errors/overflows:
    Total memory allocation failures: 0
    Total encapsulation failures: 0
    Total table overflows: 0
switch_config#
```

1.1.17 show lldp interface

Syntax

show lldp interface *interface-name*

To check the transmission and reception mode, run show lldp interface interface name.

Parameters

Parameters	Description
<i>interface-name</i>	The interface name, for instance, "G0/1", "GigaEthernet0/1".

Default Value

None

Usage Guidelines

Only when llpd is enabled can the state of the port, the transmission and reception mode of llpd packets can be checked.

Command Mode

EXEC/global configuration mode

Example

The following example shows how to check the transmission and reception mode of port g0/1.

```
switch_config#show llpd interface g0/1
GigaEthernet0/1:
Rx: enabled
Tx: enabled
switch_config#
```

1.1.18 show llpd neighbors

Syntax

show llpd neighbors

To display the simple information about neighbors, run this command.

Parameters

None

Default Value

None

Usage Guidelines

The command is used to display the simple information about neighbor list, including Device-ID, Local-Intf, Hldtme, Port-ID and Capability.

Command Mode

EXEC/global configuration mode

Example

```
switch_config#show lldp neighbors
Capability Codes:
  (R)Router,(B)Bridge,(C)DOCsIs Cable Device,(T)Telephone
  (W)WLAN Access Point, (P)Repeater,(s)station,(O)Other
```

Device-ID	Local-Intf	Hldtme	Port-ID	Capability
switch	Gig0/2	115	Gig0/32	B
switch	Gig0/32	114	Gig0/2	B

Total entries dispalyed: 2

```
switch_config#
```

1.1.19 show lldp neighbors detail

Syntax

```
show lldp neighbors detail
```

It is used to display the detailed information about the neighbor.

Parameters

None

Default Value

None

Usage Guidelines

None

Command Mode

EXEC/global configuration mode

Example

```
switch_config#show lldp neighbors detail

chassis id: 00e0.0f61.ca53
port id: Gig0/32
port description: GigaEthernet0/32
system name: switch

system description: s3448 software, Version 2.0.1K
serial: s35000456
Compiled: 2008-11-13 13:33:36 by 16170F032B9F
```

```
Time remaining: 98
system capabilities: R B
enabled capabilities: B
Management Address:
    IP: 192.168.213.62
```

Auto Negotiation -- supported,enabled

Physical media capabilities:

```
    100baseTX(FD)
    100baseTX(HD)
    10baseT(FD)
    10baseT(HD)
```

Media Attachment Unit type: 16

```
chassis id: 00e0.0f61.ca35

Physical media capabilitise:

100baseTX(FD)

100baseTX(HD)

10baseT(FD)

10baseT(HD)

Media Attachment Unit type: 16

Total entries dispalyed: 2

switch#

1.1.20 show lldp traffic

Syntax

show lldp traffic

To display all statistics information about LLDP, run show lldp traffic.

Parameters

None

Default Value

None

Usage Guidelines

None

Command Mode

EXEC/global configuration mode

Example

switch_config#show lldp traffic

LLDP traffic statistics:

Total frames out: 1599

Total entries aged: 0

Total frames in: 624

```
Total frames received in error: 0  
Total frames discarded: 0  
Total TLVs unrecognized: 0  
switch_config#
```

1.1.21 show location elin

Syntax

```
show location elin
```

To display the elin configuration of the location, run the previous command.

Parameters

None

Default Value

None

Usage Guidelines

None

Command Mode

EXEC/global configuration mode

Example

```
Switch_config#show location elin  
elin information:  
    elin 2: 0987654321  
    elin 1: 1234567890  
total: 2  
Switch_config#
```

1.1.22 show location civic [identifier *id*]

Syntax

```
show location civic [identifier id]
```

To display the civic information of the location, run the previous command.

Parameters

Parameters	Description
<i>id</i>	Stands for the ID of the to-be-set civic, which ranges from 1 to 65535.

Default Value

None

Usage Guidelines

None

Command Mode

EXEC/global configuration mode

Example

```
Switch_config#show location civic
civic address information:
    identifier: 2
        Language: Chinese
        Script: CN
-----
    identifier: 1
        City: Shanghai
        Language: English
        Script: EN
-----
    total: 2
Switch_config#
```

1.1.23 clear lldp counters

Syntax

clear lldp counters

To clear the statistics information, run clear lldp counters.

Parameters

None

Default Value

None

Usage Guidelines

None

Command Mode

EXEC

Example

```
switch#clear lldp counters
switch#
switch#show lldp traffic
LLDP traffic statistics:
    Total frames out: 0
    Total entries aged: 0
    Total frames in: 0
    Total frames received in error: 0
    Total frames discarded: 0
    Total TLVs unrecognized: 0
switch#
switch#show lldp errors
LLDP errors/overflows:
    Total memory allocation failures: 0
    Total encapsulation failures: 0
    Total table overflows: 0
switch#
```

1.1.24 clear lldp table

Syntax

clear lldp table

To remove the neighbor list, run cleas lldp table.

Parameters

None

Default Value

None

Usage Guidelines

None

Command Mode

EXEC

Example

```
switch#clear lldp table
switch#
switch#show lldp neighbors
Capability Codes:
(R)Router,(B)Bridge,(C)DOCsis Cable Device,(T)Telephone
(W)WLAN Access Point, (P)Repeater,(S)station,(O)Other
```

Device-ID	Local-Intf	Hldtme	Port-ID	Capability
-----------	------------	--------	---------	------------

Total entries displayed: 0
