

Universal supplies

## Metal trays

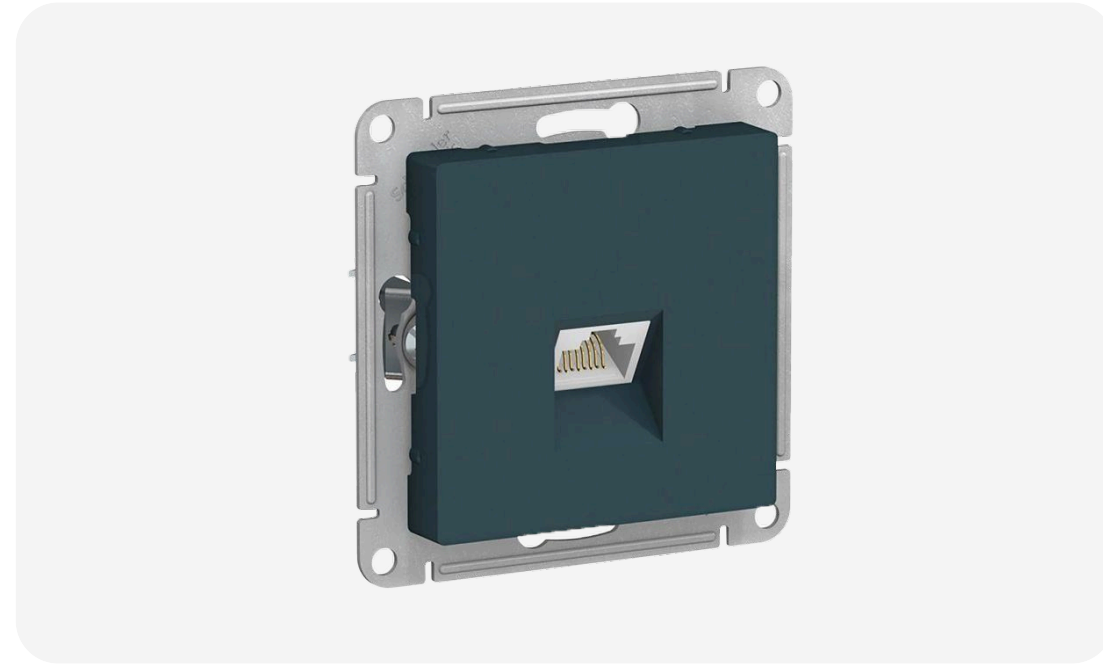

The metal tray system is designed for organizing cable routes and engineering systems in industrial, civil, commercial, and municipal construction projects.

The system includes: sheet metal trays, ladder trays, wire trays, and accessories, as well as a suspension system for all types of installation (vertical, horizontal, and inclined), fasteners, and hardware.

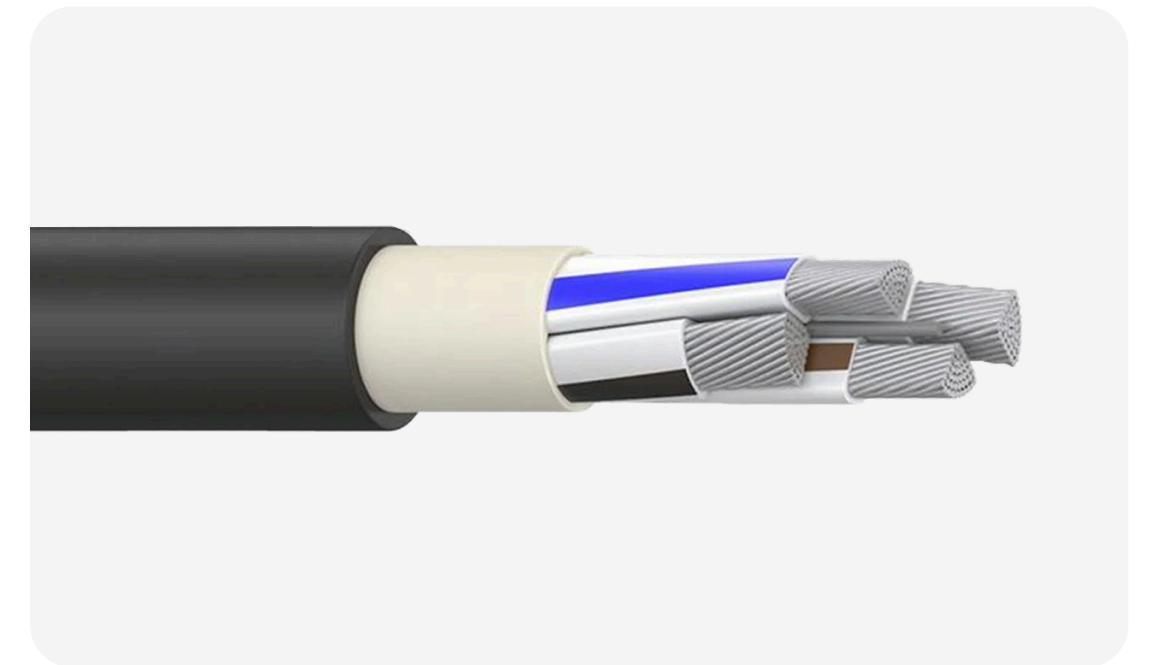

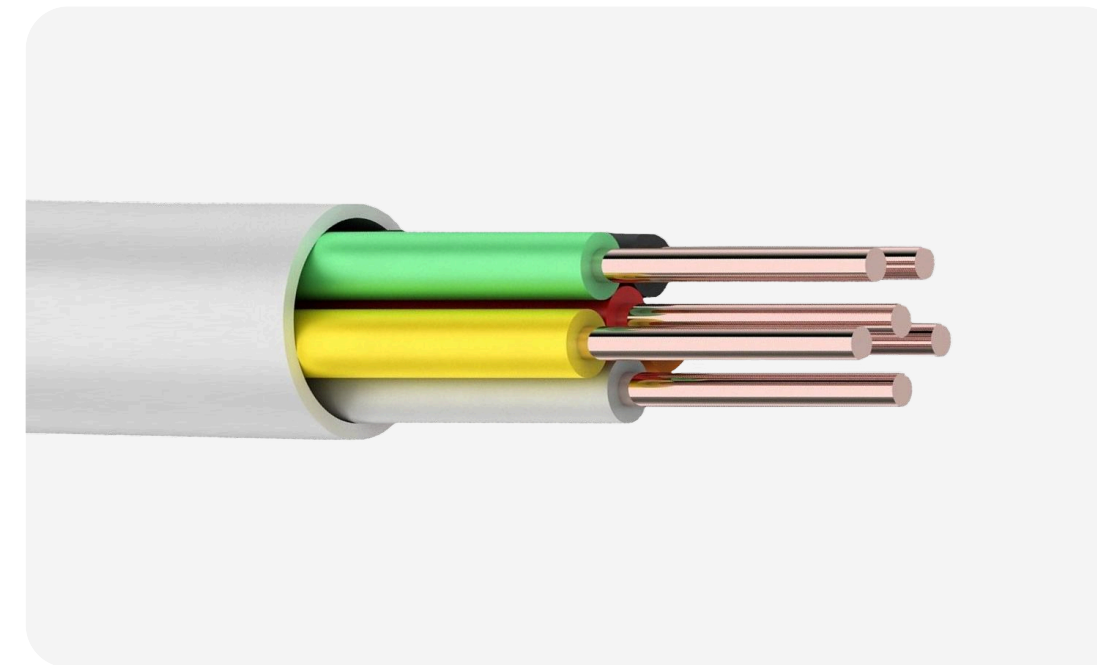

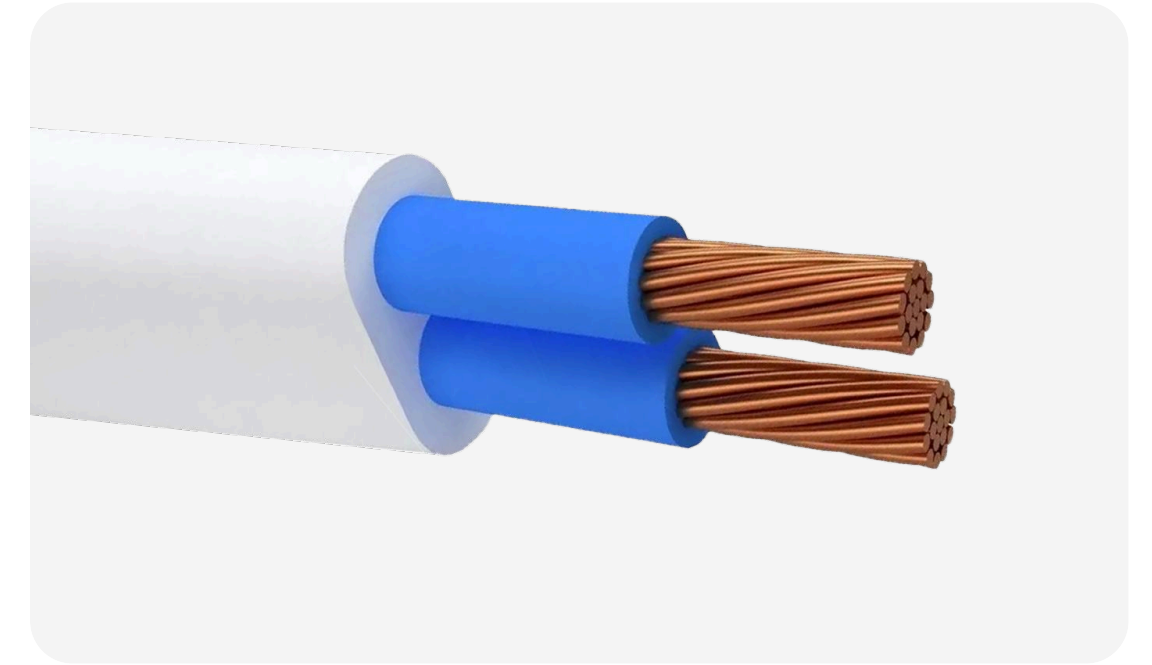

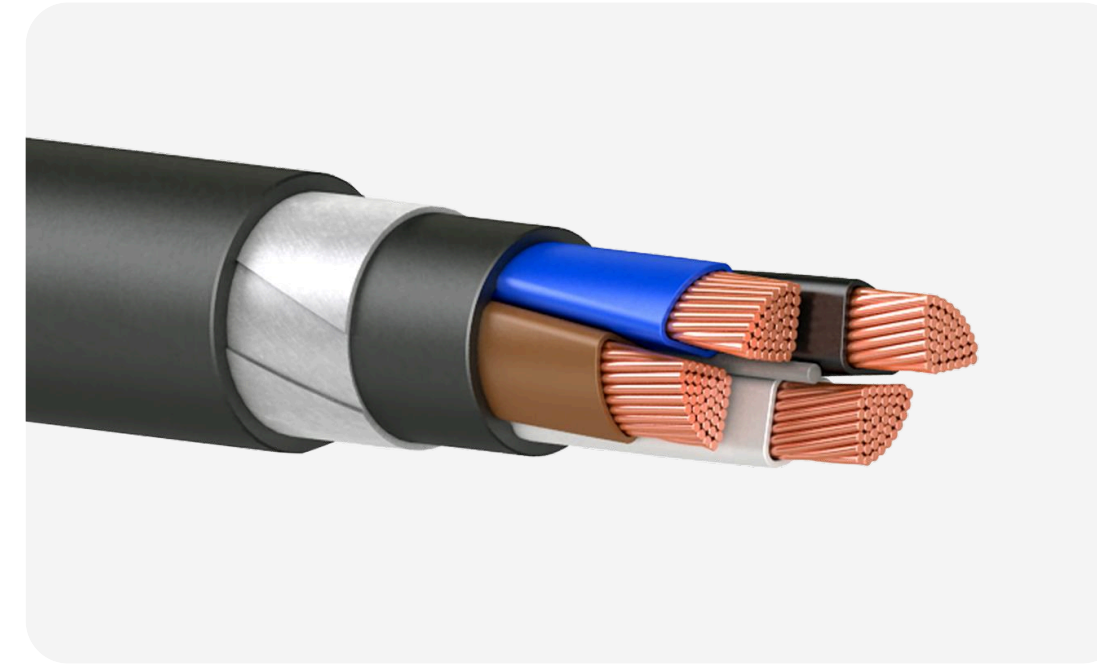

## PVC cable duct

A system of modern solutions for the installation of power, low-voltage, and information communications of an open type. Cable trays can be used virtually without limitations in buildings of any type: residential, administrative-office, industrial, as well as in medical and educational facilities, during any construction, renovation, or major reconstruction of buildings.

## Low-voltage equipment

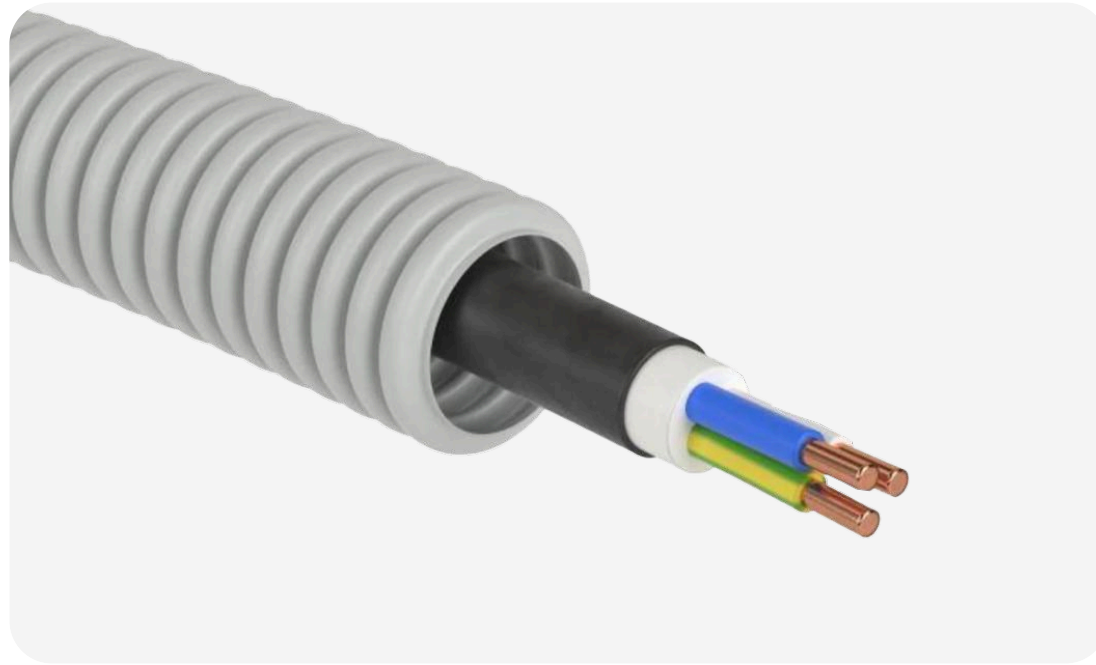

This is a wide range of sockets and circuit breakers, which are used in industrial, commercial, administrative, and residential buildings due to a number of advantages that ensure reliable power supply.

## Electric cable

Used in buildings of any type: residential, administrative-office, industrial, as well as in medical and educational facilities, during any construction, renovation, and major reconstruction of buildings.

## Pipes for cable routing

This is a professional cable management system for routing power and low-voltage lines of a concealed type within buildings and premises of various purposes. Most commonly, pipes are used for routing electrical wiring and cables in walls (along walls), ceilings (along ceilings), and floors of residential, administrative, and industrial spaces.

## Metal hose

It is designed to protect wires and cables from mechanical damage and ensure fire safety. The conduit is intended to protect wires, cables, rubber hoses, and other similar products from mechanical damage, to meet fire safety requirements, and for use in ventilation systems.

## Computers

The company SNR can supply specialized workstations for software developers and graphic modeling, as well as solutions for everyday tasks. Personal computers can be supplied in various form factors, ranging from the classic tower design to rack-mounted solutions.

We supply computers from well-known vendors. The warranty is in accordance with the specific manufacturer's terms. We also have our own service centers.

## Monoblocks

This device combines a monitor and a personal computer in one unit. In certain situations, an all-in-one PC can be much more convenient than a desktop or a laptop.

By purchasing an all-in-one PC, the user effectively organizes their workspace and frees up desk space. The all-in-one is easy to move and relatively simple to carry within a room.

SNR company can supply all-in-one PCs from all vendors represented in the market.

## Laptops

With the global growth of small and medium-sized business sectors, so-called business laptops have become increasingly common in the market. Modern companies prefer to purchase laptops instead of traditional desktop PCs. Laptops allow office employees to tackle all their daily tasks while also organizing the most ergonomic workspace.

## Monitors

Make an impression by decorating your workspace with a modern monitor. Combine multiple screens at once, rotate them horizontally and vertically, and work in groups, watch movies, play games, and create with a display that helps expand the limits of your imagination.

High standards of digital image transmission attract professionals from various fields who require ultra-high clarity and reliability.

## Office equipment (MFPs, Scanners, Printers)

Printing equipment refers to devices used in an organization's operations. This term encompasses a wide range of machines used for document printing, copying, information transmission, and processing. A modern office cannot function without this type of equipment.

SNR company can supply printing devices for various purposes: both personal devices and corporate corridor-type solutions (for large workgroups).

## Hard disks

Hard drives for video surveillance are high-performance solutions with large capacity for surveillance systems of varying complexity. They are based on advanced technologies and are characterized by high reliability, fault tolerance, and energy efficiency, enabling them to successfully handle even the most demanding tasks.

# About the company

Since its establishment in 2006, the company has become one of the leading global suppliers of networking and switching equipment, with its own research and development (R&D) and manufacturing facilities.

SNR offer a wide range of our own products and turnkey solutions to meet the needs of clients.

- Data transmission networks and corporate IT infrastructure
- Solutions for mobile operators
- Optical transport networks (DWDM)
- Data center solutions
- Cloud solutions and network security
- Voice and unified communication solutions

Commitment to continuous development and innovation enables us to provide our clients with the most modern and efficient solutions.
