## Product overview

The HP 3500 Switch Series consists of advanced intelligent-edge switches, available in 24-port and 48-port fixed-port models. The foundation for these switches is a purpose-built, programmable HP ProVision ASIC that allows the most demanding networking features, such as quality of service (QoS) and security, to be implemented in a scalable yet granular fashion. With a variety of Gigabit Ethernet and 10/100 interfaces; integrated PoE+, PoE, and non-PoE options; and versatile 10GbE connectivity (CX4, X2, and SFP+) on Gigabit Ethernet switches, the 3500 Switch Series offers excellent investment protection, flexibility, and scalability, as well as ease of deployment, operation, and maintenance.

## **Features and Benefits**

## Software-defined networking

NEW OpenFlow

is a key technology enabling software-defined networking by allowing the separation of data (packet forwarding) and control (routing decision) paths

### Quality of Service (QoS)

Advanced classifier-based QoS

classifies traffic using multiple match criteria based on Layer 2, 3, and 4 information; applies QoS policies such as setting priority level and rate limit to selected traffic on a per-port or per-VLAN basis

### Overview

### • Layer 4 prioritization

enables prioritization based on TCP/UDP port numbers

### • Traffic prioritization

allows real-time traffic classification into eight priority levels mapped to eight queues

#### Bandwidth shaping

#### Port-based rate limiting

provides per-port ingress-/egress-enforced increased bandwidth

### Classifier-based rate limiting

uses an access control list (ACL) to enforce increased bandwidth for ingress traffic on each port

#### Reduced bandwidth

provides per-port, per-queue egress-based reduced bandwidth

#### Class of Service (CoS)

sets the IEEE 802.1p priority tag based on IP address, IP Type of Service (ToS), Layer 3 protocol, TCP/UDP port number, source port, and DiffServ

### Management

## • Remote intelligent mirroring

mirrors selected ingress/egress traffic based on ACL, port, MAC address, or VLAN to a local or remote HP 8200 zl, 6600, 6200 yl, 5400 zl, or 3500 Switch anywhere on the network

#### RMON, XRMON, and sFlow v5

provide advanced monitoring and reporting capabilities for statistics, history, alarms, and events

### IEEE 802.1AB Link Layer Discovery Protocol (LLDP)

advertises and receives management information from adjacent devices on a network, facilitating easy mapping by network management applications

#### Uni-Directional Link Detection (UDLD)

monitors a cable between two switches and shuts down the ports on both ends if the cable is broken, turning the bidirectional link into a unidirectional one; this prevents network problems such as loops

#### Management simplicity

common software features and CLI implementation across all ProVision-based switches (including the zl and yl switches)

## • Command authorization

leverages RADIUS to link a custom list of CLI commands to an individual network administrator's login; an audit trail documents activity

#### Friendly port names

allow assignment of descriptive names to ports

#### • Dual flash images

provide independent primary and secondary operating system files for backup while upgrading

## • Multiple configuration files

can be stored to the flash image

#### NEW Comware CLI

#### Comware-compatible CLI

bridges the experience of HP Comware CLI users who are using the HP ProVision software CLI

## O Display and fundamental Comware CLI commands

are embedded in the switch CLI as native commands; display output is formatted as on Comware-based switches, and fundamental commands provide a Comware-familiar initial switch setup

### O Configuration Comware CLI commands

when Comware commands are entered, CLI help is elicited to formulate the correct ProVision software CLI comman

The CX4 Media Converter connects directly to the CX4 port, and a 12-strand multimode ribbon cable is used between CX4 Media Converters.

The 12-strand multimode ribbon cable can have either 62.5 or 50 micron core diameters, terminated by standard Multiple Terminations Push-pull Latch (MTP) connectors in a crossover configuration. The ribbon cables are known as

Multi-fiber Push (MPO).

Users should specify a "crossover" (often called "key up/key up") configuration for the ribbon cable. Also, specify female-female cables to connect to ProCurve 10-GbE CX4 Media Converters.
