

# Huawei CloudEngine 6881 Switch Datasheet

Huawei CloudEngine 6881 series switches have advanced hardware architecture with 40GE/100GE uplink ports and high-density 10GE access ports.

CloudEngine 6881 series can be used to build a scalable data center network platform in the cloud computing era, or work as core or aggregation switches on campus networks.

# Product Overview

Huawei CloudEngine 6881 series switches are next-generation 10GE access switches that provide high performance and high port density on data center networks and high-end campus networks. The CloudEngine 6881 series have advanced hardware architecture with 40GE/100GE uplink ports and high-density 10GE access ports. Using Huawei's VRP8 software platform, CloudEngine 6881 series switches support extensive data center features and high stacking capabilities. In addition, the CloudEngine 6881 series use a flexible airflow design (front-to-back or back-to-front). CloudEngine 6881 series can work with CloudEngine 16800 or CloudEngine 12800 series data center core switches to build elastic, virtual, and high-quality 40GE/100GE full-mesh networks, meeting requirements of cloud computing data centers.

CloudEngine 6881 series provide high-density 10GE access to help enterprises and carriers build a scalable data center network platform in the cloud computing era. They can also work as core or aggregation switches on campus networks.

## Product Appearance

CloudEngine 6881-48S6CQ series switches provide 48 x 10GE SFP+ ports , 6 x 100GE QSFP28 ports.

CloudEngine 6881-48T6CQ series switches provide 48 x 10GE Base-T ports , 6 x 100GE QSFP28 ports.

# Product Characteristics

## High-Density Access

- CloudEngine 6881 series provide up to 48 x 10GE ports, allowing for high-density 10GE server access and smooth evolution.
- CloudEngine 6881 series provide up to 6 x 100GE QSFP28 ports. Each QSFP28 port can also be used as one 40GE QSFP+ port, providing flexibility in networking. The uplink 40GE/100GE ports can be connected to CloudEngine 16800 or CloudEngine 12800 series switches to build a non-blocking network platform.

## Inter-device Link Aggregation, High Efficiency and Reliability

- CloudEngine 6881 series support multi-chassis link aggregation group (M-LAG), which enables links of multiple switches to aggregate into one to implement device-level link backup.
- Switches in an M-LAG system all work in active state to share traffic and back up each other, enhancing system reliability.
- Switches in an M-LAG system can be upgraded independently. During the upgrade, other switches in the system take over traffic forwarding to ensure uninterrupted services.
- M-LAG supports dual-homing to Ethernet, VXLAN, and IP networks, allowing for flexible networking.

## Virtualized Hardware Gateway, Enabling Quick Deployment

- CloudEngine 6881 series can connect to a cloud platform through open APIs, facilitating the unified management of virtual and physical networks.
- CloudEngine 6881 series can work with the industry's mainstream virtualization platforms. The virtualization function protects investments by ensuring services can be deployed quickly without requiring network changes.

- The hardware gateway deployment enables fast service deployment without changing the customer network, providing investment protection.
- CloudEngine 6881 series support Border Gateway Protocol - Ethernet VPN (BGP-EVPN), which can run as the VXLAN control plane to simplify VXLAN configuration within and between data centers.

## Standard Interfaces, Enabling Openness and Interoperability

- CloudEngine 6881 series support NETCONF and can work with Huawei iMaster NCE-Fabric.
- CloudEngine 6881 series support Ansible-based automatic configuration and open-source module release, expanding network functions and simplifying device management and maintenance.
- CloudEngine 6881 series can be integrated into mainstream SDN and cloud computing platforms flexibly and quickly.

## ZTP, Implementing Automatic O&M

- CloudEngine 6881 series support Zero Touch Provisioning (ZTP). ZTP enables the CloudEngine 6881 series to automatically obtain and load version files from a USB flash drive or file server, freeing network engineers from onsite configuration and deployment. ZTP reduces labor costs and improves device deployment efficiency.
- ZTP provides built-in scripts through open APIs. Data center personnel can use a programming language they are familiar with, such as Python, to centrally configure network devices.
- ZTP decouples the configuration time of new devices from the device quantity and area distribution, which improves service provisioning efficiency.

## FabricInsight-based Intelligent O&M

- The CloudEngine 6881 provides telemetry technology to collect device data in real time and send the data to Huawei data center network analyzer iMaster NCE-FabricInsight. The iMaster NCE-FabricInsight analyzes network data based on the intelligent fault identification algorithm, accurately displays the real-time network status, effectively demarcates and locates faults in a timely manner, and identifies network problems that affect user experience, accurately guaranteeing user experience.

## iMaster NCE-based Simplified Network Deployment

- CloudEngine 6881 series switches can interconnect with iMaster NCE-Fabric through standard protocols such as NetConf and SNMP to implement network automatic management and control, providing more efficient and intelligent operation methods, simplifying network management, and reducing the OPEX.

## FabricInsight-based Intelligent O&M

- Huawei's Packet Conservation Algorithm for Internet (IPCA) technology implements accurate per-hop packet loss, delay, and jitter detection for real service flows, locating network faults in real time.
- CloudEngine 6881 series proactively perform path detection over the entire network, periodically checking sample flows to determine the connectivity of all paths on the network and locates fault points, providing real-time network health information.
- CloudEngine 6881 series support visualization of all flows and congestion, improving service experience.

## Flexible Airflow Design, Improving Energy Efficiency

Flexible front-to-back/back-to-front airflow design

- CloudEngine 6881 series use a strict front-to-back/back-to-front airflow design that isolates cold air channels from hot air channels. This design improves heat dissipation efficiency and meets design requirements of data center equipment rooms.
- Air can flow from front to back or back to front depending on the fans and power modules that are used.
- Redundant power modules and fans can be configured to ensure service continuity.

Innovative energy-saving technologies

- CloudEngine 6881 series have innovative energy-saving chips and can measure system power consumption in real time. The fan speed can be adjusted dynamically based on system consumption. These energy-saving technologies reduce O&M costs and contribute to a greener data center.

## Clear Indicators, Simplifying Maintenance

Clear indicators

- Port indicators clearly show the port status and port rate. The 100GE port indicators can show the states of all ports derived from the 100GE ports.
- State and stack indicators on both the front and rear panels enable users to maintain the switch from either side.
- CloudEngine 6881 series support remote positioning. Remote positioning indicators enable users to easily identify the switches they want to maintain in an equipment room full of devices.

Simple maintenance

- The management port, fans, and power modules are on the front panel, which facilitates device maintenance.
- Data ports are located at the rear, facing servers. This simplifies cabling.

## Licensing

CloudEngine 6881 supports Huawei IDN One Software (N1 mode for short) licensing mode. The CloudFabric N1 business model combines the NCE controller, analyzer, and CloudEngine switch software for use in a range of common scenarios. This simplifies transactions, provides customers with more functions and value, and protects their software investment with Software License Portability.

|-------------|---|-------------------------|
|             | Packet filtering based on source MAC addresses                                      |                         |
|             | MAC address limiting based on ports and VLANs                                       |                         |
| IP routing  | IPv4 routing protocols, such as RIP, OSPF, IS-IS, and BGP                           |                         |
|             | IPv6 routing protocols, such as RIPng, OSPFv3, IS-ISv6, and BGP4+                   |                         |
|             | IP packet fragmentation and reassembly  |                         |
| IPv6        | VXLAN over IPv6   |                         |
|             | IPv6 VXLAN over IPv4  |                         |
|             | IPv6 Neighbor Discovery (ND)  |                         |
|             | Path MTU Discovery (PMTU)   |                         |
|             | TCP6, IPv6 ping, IPv6 tracert, IPv6 socket , UDP6, and raw IPv6                     |                         |
| Multicast   | Multicast routing protocols such as IGMP, PIM-SM, and MBGP                          |                         |
|             | IGMP snooping   |                         |
|             | IGMP proxy  |                         |
|             | Fast leaving of multicast member interfaces   |                         |
|             | Multicast traffic suppression   |                         |
|             | Multicast VLAN  |                         |
| Reliability | Fine-grained microsegmentation isolation  |                         |
|             | Link Aggregation Control Protocol (LACP)  |                         |
|             | STP, RSTP, VBST, and MSTP   |                         |
|             | BPDU Guard  |                         |
|             | Smart Link and multi-instance   |                         |
|             | Device Link Detection Protocol (DLDP)   |                         |
|             | Hardware-based Bidirectional Forwarding Detection (BFD)                             |                         |
|             | VRRP, VRRP load balancing, and BFD for VRRP   |                         |
|             | BFD for BGP/IS-IS/OSPF/static route   |                         |
|             | BFD for VXLAN   |                         |
| QoS         | Traffic classification based on Layer 2, Layer 3, Layer 4, and priority information |                         |
|             | ACL, CAR, re-marking, and scheduling  |                         |
|             | Queue scheduling modes such as PQ, DRR, and PQ+DRR                                  |                         |
|             | Congestion avoidance mechanisms, including WRED and tail drop                       |                         |
|             | Traffic shaping   |                         |
| O&M         | Packet Conservation Algorithm for Internet (iPCA)                                   |                         |
|             | Network-wide path detection   |                         |
|             | Telemetry   |                         |

| Item                          | CloudEngine 6881-48S6CQ  | CloudEngine 6881-48T6CQ |
|-------------------------------|--|-------------------------|
|                               | ERSPAN+  |                         |
|                               | Statistics on the buffer microburst status   |                         |
|                               | VXLAN OAM: VXLAN ping and VXLAN tracer   |                         |

|                               | File upload and download through FTP and TFTP  |                         |
|                               | BootROM upgrade and remote upgrade   |                         |
|                               | Hot patches  |                         |
|                               | User operation logs  |                         |
|                               | Zero Touch Provisioning (ZTP)  |                         |
| Security and management       | Command line authority control based on user levels, preventing unauthorized users from using commands |                         |
|                               | Defense against DoS address attacks, ARP storms, and ICMP attacks                                      |                         |
|                               | Port isolation, port security, and sticky MAC  |                         |
|                               | Binding of the IP address, MAC address, port number, and VLAN ID                                       |                         |
|                               | Authentication methods, including AAA, RADIUS, and HWTACACS  |                         |
|                               | Remote Network Monitoring (RMON)   |                         |

## Performance and Scalability

| Item   | CloudEngine 6881-48S6CQ | CloudEngine 6881-48T6CQ |
|--|-------------------------|-------------------------|
| Maximum number of MAC address entries                        | 256K                    |                         |
| Maximum number of routes (FIB IPv4/IPv6)                     | 256K/80K                |                         |
| ARP size   | 256K                    |                         |
| Maximum number of VRFs                                       | 4096                    |                         |
| IPv6 ND table size   | 80K                     |                         |
| Maximum number of multicast routes (multicast FIB IPv4/IPv6) | 32K/2K                  |                         |
| Maximum VRRP groups  | 1024                    |                         |
| Maximum number of ECMP paths                                 | 128                     |                         |
| Maximum number of ACLs                                       | 30K                     |                         |
| Maximum number of broadcast domains                          | 8K                      |                         |
| Maximum number of BDIF interfaces                            | 8K                      |                         |
| Maximum number of VXLAN tunnel endpoints (VTEPs)             | 2K                      |                         |
| Maximum number of LAGs                                       | 1024                    |                         |
| Maximum number of links in a LAG                             | 128                     |                         |

| Item   | CloudEngine 6881-48S6CQ | CloudEngine 6881-48T6CQ |
|--|-------------------------|-------------------------|
| Maximum number of MSTIs                              | 64                      |                         |
| Maximum number of VLANs where VBST can be configured | 1000                    |                         |

Note: This specification may vary between different scenarios. Contact Huawei for details.

## Hardware Specifications

| Item                  |   | CloudEngine 6881-48S6CQ   | CloudEngine 6881-48T6CQ |
|-----------------------|---|---|-------------------------|
| Physical features     | Dimensions (W x D x H)  | 442 mm x 420 mm x 43.6 mm   |                         |
|                       | Weight (excluding optical transceivers, power modules, and fan assemblies/ including AC power modules and fan assemblies, excluding optical transceivers, kg) | 5.7/7.8   | 6.5/8.5                 |
|                       | Switching capacity (Tbps)   | 2.16  |                         |
|                       | Forwarding performance (Mpps)   | 940   |                         |
| 25GE SFP28 ports      |   | 0   | 0                       |
| 10GE SFP+ ports       |   | 48  | 0                       |
| 10GE BASE-T ports     |   | 0   | 48                      |
| 40/100GE QSFP28 ports |   | 6   |                         |
| Management interface  | Out-of-band management port   | 1*GE management interface   |                         |
|                       | Console port  | 1*RJ45 interface  |                         |
|                       | USB port  | 1   |                         |
| CPU                   | Main frequency (Hz)   | 1.4 GB  |                         |
|                       | Number of cores   | 4   |                         |
| Storage               | RAM   | 4 GB  |                         |

## Optical Transceivers and Cable

For details about optical transceivers and cables, visit <https://e.huawei.com/en/material/networking/dcs/switch/f6d91cf16df0474998087676a33fd41e>.

## Ordering Information

| Mainframe       |   |
|-----------------|---|
| CE6881-48S6CQ   | CE6881-48S6CQ switch (48*10G SFP+, 6*100G QSFP28, without fan and power modules)                          |
| CE6881-48S6CQ-B | CE6881-48S6CQ-B switch (48*10G SFP+, 6*100G QSFP28, 2*AC power modules, 4*fan modules, port-side intake)  |
| CE6881-48S6CQ-F | CE6881-48S6CQ-F switch (48*10G SFP+, 6*100G QSFP28, 2*AC power modules, 4*fan modules, port-side exhaust) |
| CE6881-48T6CQ   | CE6881-48T6CQ switch (48*10G RJ45, 6*100G QSFP28, without fan and power modules)                          |
| CE6881-48T6CQ-B | CE6881-48T6CQ-B switch(48*10GE RJ45,6*100GE QSFP28,2*AC power modules,4*fan modules,port-side intake)     |
| CE6881-48T6CQ-F | CE6881-48T6CQ-F switch (48*10G RJ45, 6*100G QSFP28, 2*AC power modules, 4*fan modules, port-side exhaust) |

### Fan Tray

| Model      | Description                        | Applicable Product      |
|------------|------------------------------------|-------------------------|
| FAN-031A-F | Fan box (F,FAN panel side intake)  | CloudEngine 6881 series |
| FAN-031A-B | Fan box (B,FAN panel side exhaust) | CloudEngine 6881 series |

### Power

| Model        | Description   | Applicable Product      |
|--------------|---|-------------------------|
| PAC600S12-CF | 600W AC Power Module(Front to Back,Power panel side intake)   | CloudEngine 6881 series |
| PAC600S12-CB | 600W AC Power Module(Back to Front, Power panel side exhaust) | CloudEngine 6881 series |

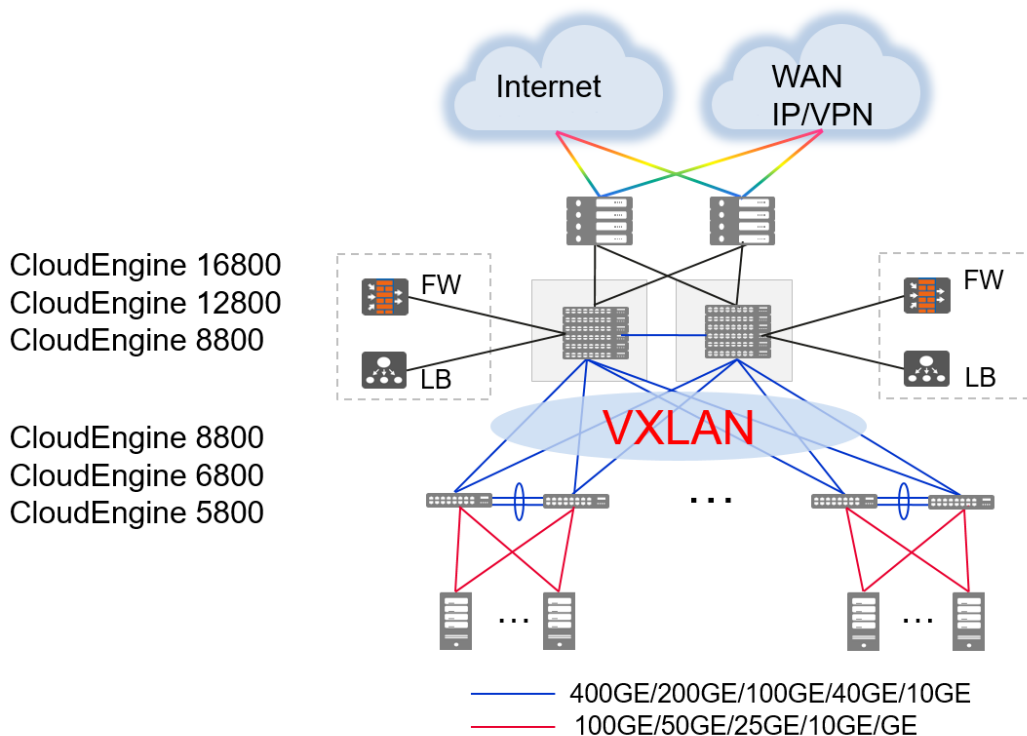

| Model         | Description   | Applicable Product      |
|---------------|---|-------------------------|
| PDC1000S12-DF | 1000W DC Power Module (Front to Back,Power panel side intake)     | CloudEngine 6881 series |
| PDC1000S12-DB | 1000W DC Power Module (Front to Back,Power panel side exhaust)    | CloudEngine 6881 series |
| PHD1K2S12-DB  | 1200W HVDC Power Module (Back to Front, Power panel side exhaust) | CloudEngine 6881 series |

| Software          |  |
|-------------------|--|
| N1-CE68LIC-CFFD   | N1-CloudFabric Foundation SW License for CloudEngine 6800          |
| N1-CE68CFFD-SnS1Y | N1-CloudFabric Foundation SW License for CloudEngine 6800-SnS-Year |
| N1-CE68LIC-CFAD   | N1-CloudFabric Advanced SW License for CloudEngine 6800            |
| N1-CE68CFAD-SnS1Y | N1-CloudFabric Advanced SW License for CloudEngine -SnS -Year      |
| N1-CE68LIC-CFPM   | N1-CloudFabric Premium SW License for CloudEngine 6800             |
| N1-CE68CFPM-SnS1Y | N1-CloudFabric Premium SW License for CloudEngine 6800 -SnS-Year   |

## Networking and Application

### Data Center Applications

On a typical data center network, CloudEngine 6881 switches work as TOR switches and connect to CloudEngine16800, CloudEngine 12800 or CloudEngine 8800 core switches using 40GE/100GE ports, building an end-to-end 100GE full-mesh network. The core and TOR switches use fabric technologies such as VXLAN to build a non-blocking large Layer 2 network, which allows for large-scale VM migration and flexible service deployment.

Note: VXLAN can also be used on campus networks to support flexible service deployment in different service areas.
