Chapter 1. Introduction

1.1 Features

NetAgent is the SNMP (Simple Network Management Protocol) card for monitoring UPS. Not only could remote control the UPS and get the current status of it, the NetAgent that has 3 ports or USB ports could also provide other functions, ex. connect to compatible modem to send SMS notification, or our NetFeeler II and its additional sensors for ambient temperature, humidity and water status. This product is for “Contact Closure” and “RS232” interface UPS. The communication protocol includes the Contact Closure, RS232[MegaTec], Phoenixtec], SEC 2400, SEC 9600, Megatec Three Phase, ..etc. NetAgent provides a simple and easy installation procedure. CD provides along with NetAgent offers several software to allow the user to configure IP address; central monitoring and multi shutdown on different operating systems. Other advance configurations could be accomplished in the Web browser.

Features:

- ❶ Provide SNMP MIB to monitor & control UPS
- ❷ Auto-sense 10M /100M Fast Ethernet (*10M/100M/1000M is available for specific model*)
- ❸ Manage and configure via Telnet, Web Browser or NMS
- ❹ Support TCP/IP, UDP, SNMP, Telnet, SNTP, PPP, HTTP, HTTPS, SMTP, Modbus Protocol
- ❺ Support SSL/TLS, SSH Encryption
- ❻ Providing easy setup and upgrade tools via our Netility software
- ❼ Send SNMP TRAP ; E-mail and SMS for events notification.
- ❽ Auto email daily UPS history report
- ❾ Perform graceful shutdown with our ClientMate software
- ❿ Add-on optional NetFeeler II for temperature, humidity, water, smoke and door sensor

1.2 Applications

■ NetAgent allows UPS to be monitor on network

When the UPS connects with NetAgent, the system manager could check each and every UPS condition by a computer with Browser installed. The manager could monitor and control the UPS by simply input the IP address of the NetAgent which connects to the UPS. When there is a power abnormal condition happens, the NetAgent could also send the trap information to the system manager to take proper action.

■ NetAgent Provides Shutdown Utilities

When a computer install our shutdown software in the network that connects to the NetAgent, when UPS is in AC failure condition or Battery Low condition, the software would close all the files of the operating system and shutdown gracefully. This could avoid system corrupt when a power disconnection happened.

■ NetAgent II for Surrounding Monitoring

3 Ports NetAgent or NetAgent with USB ports could connect to optional sensor-NetFeeler II to get the surrounding temperature/humidity/smoke/fire signals. These information could also be revealed on the NetAgent Web page. When there is an abnormal condition happened, it could also be sent as a trap to the system manager.

When we need the NetAgent?

- ❶ When we need to remote monitoring and controls the UPS conditions. For example, the system manager could use the Internet to control all the UPS conditions all over the country. When the shutdown utility is installed, the shutdown utility could close all the files and shutdown the system when a power abnormal condition happened.
- ❷ When we need to monitor surrounding conditions of the server room, warehouse, office, etc. For example, the system manager could know the temperature, humidity, smoke and water condition by our NetFeeler II which connects with NetAgent. User may read the data via NetAgent webpage.

2.5 NetAgent Mini 9 / NetAgent 9 Package Accessories

(1) Utility CD

CD Contents :

- **Netility** - NetAgent Software too – IP configuration / Firmware Upgrade
- **ClientMate** - Shutdown Software
- **SMS Server** - SMS Notification Software (with compatible Modem)
- **SNMPView** - NMS Software/ Multi Monitoring
- **Time Server** - Time Server Software
- **iMConfig** - Multi Configuration Software

(2) Quick Installation Guide (Optional)

(3) Adaptor

5.3V

For NetAgent Mini Series

9V

For NetAgent 9 Series

(4) ModBus On RS485 Coverter Board

(5) Cables

- **M2501** – For connection between NetAgent and dry contact UPS

- **M2502** – For connection between NetAgent and RS232 pin 6,7,9 UPS

- **M2505** – For connection between NetAgent and RS232 pin 2,3,5 UPS

- **M2506** – For connection between NetAgent and GPRS / CDMA modem

Chapter 3. NetAgent Installation

3.1 Hardware Installation

■ Internal NetAgent

☀ **NOTE : Turn Off UPS Power before installation**

■ External NetAgent Mini

☀ **Turn Off UPS Power before installation**

Find RS232 port on UPS

Attach and screw NetAgent's RS232 connector on it

Connect LAN cable

Connect NetAgent Mini 5.3V adaptor

Turn ON UPS

■ External NetAgent II / 9

3.2 Software Installation

NetAgent Utility CD offers several management and shutdown software. Insert CD into CD-ROM and software can be select under **【Program Installation】**

Netility: Configure and Search NetAgent. Refer to 4.3

ClientMate: Shutdown OS Software. Refer to Chapter 6

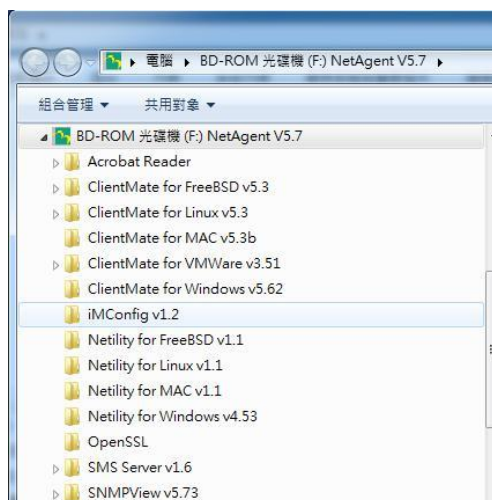

SMS Server: SMS notification Softwar. Refer to Chapter 9

SNMPView : Multi monitoring Software. Refer to Chapter 7

Time Server: Time server software

iMConfig: Muti-configuration Software. Refer to Chapter 8

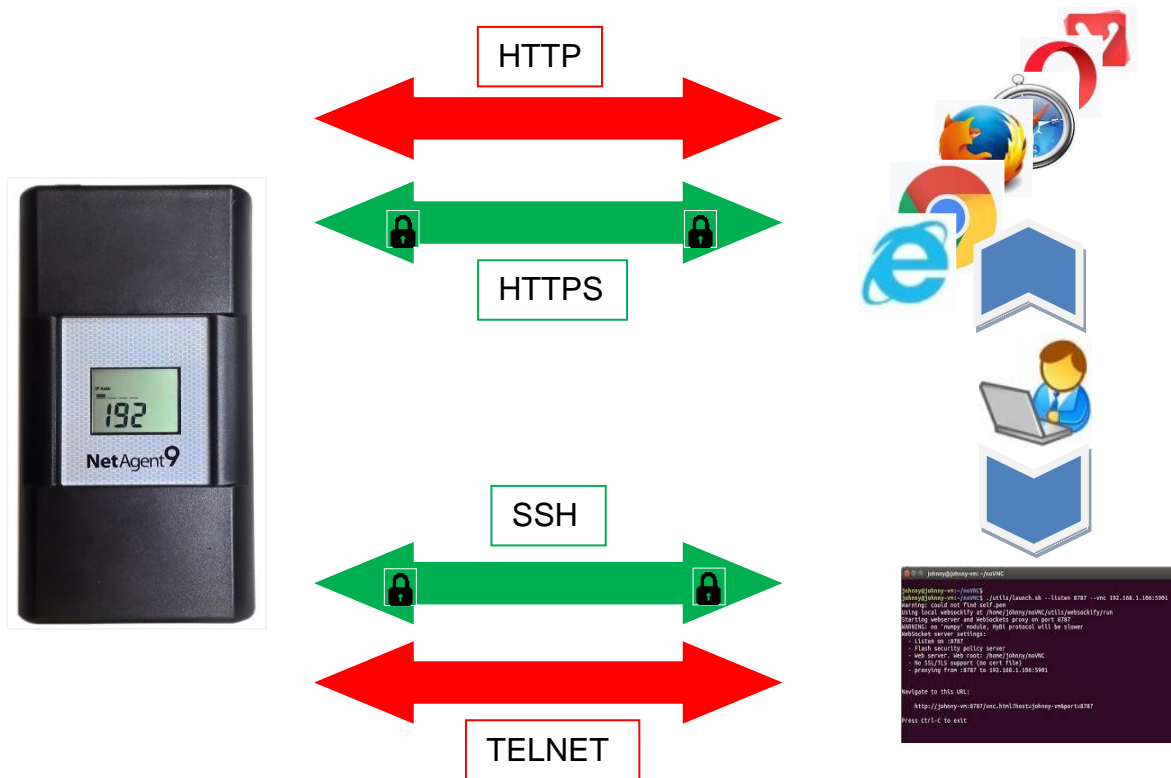

If the PC does not executes CD program automatically, please select from File Managment

Chapter 4. NetAgent Setting

4.1 Introduction

NetAgent can be login via web or HyperTerminal with protocol and encryption of HTTP/HTTPS/SSH/Telnet. Enter the IP address of NetAgent to configure and monitor the UPS status.

4.2 NetAgent Login Procedure

NOTE 1 : Each NetAgent has its unique serial number / MAC address and Password. This is available on the label of each unit. This helps to identify the card information on Netility

NOTE 2 : NetAgent with LCD display may obtain the IP info from it.

Example of LCD display format as below

IP address 192.168.0.70

Subnet Mask: 255.255.255.0

Gateway:192.168.0.1

When NetAgent IP is known, enter such IP address on the browser to login. If non-LCD NetAgent model, install Netility software to find and configure its IP address.

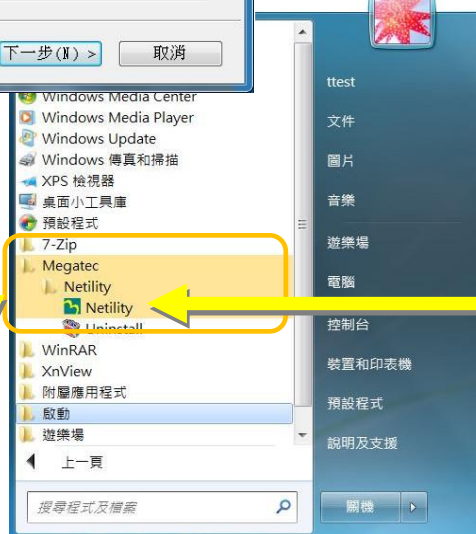

4.3 Netility Installation and Setting

■ Netility Installation

Netility is tool software that helps the user to search all the available NetAgent within network as well as to configure IP address and firmware upgrade. Mount the NetAgent Utility CD on CD-ROM and click on Program Installation>Netility>Windows v4.53

Netility installation directory

Netility Software

Under All Programs/ Megatec File Directory

■ Netility Operation and Setting

Netility main pages divided into 2 sections:

1. Online NetAgent List
2. Function Selection

1.1 Online NetAgent List

When open up Netility , it automatically searches all the available online NetAgent within the network with its serial number, IP address, MAC address. Double click on the specific NetAgent with valid IP address, it will direct to the NetAgent's webpage. (List refreshes automatically every 2 minutes)

The top screenshot shows the Netility interface with a table of devices. The row with IP address 192.168.0.224 is highlighted in red. A blue arrow points from this row to the bottom screenshot.

Serial Number	MAC Address	IP Address
3927000569	00-03-EA-11-45-F9	192.168.0.29
3927145099	00-03-EA-13-7A-8B	192.168.0.34
3927150530	00-03-EA-13-8F-C2	192.168.0.167
3927154045	00-03-EA-13-9D-7D	192.168.0.35
3927193225	00-03-EA-14-36-89	192.168.0.198
3927196066	00-03-EA-14-41-A2	192.168.0.132
3927213199	00-03-EA-14-84-8F	192.168.0.32
3927225097	00-03-EA-14-B3-09	192.168.0.224
3927302529	00-03-EA-15-E1-81	192.168.0.31

Hardware Version: HDA520W Select 1 of 24

The bottom screenshot shows the same interface with the row for IP address 192.168.0.224 selected and highlighted in blue. A yellow arrow points to this row with a callout box that says "Double click to login to the webpage".

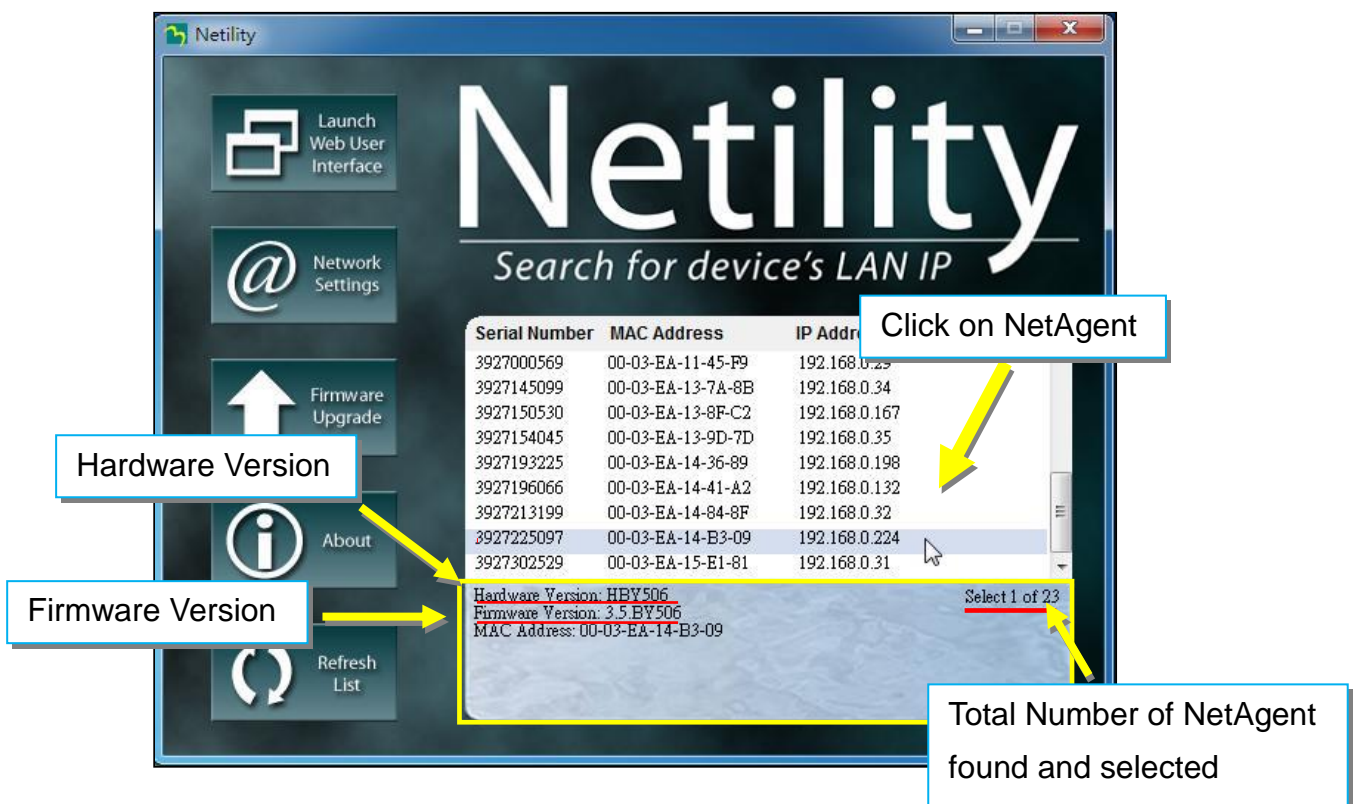

Serial Number	MAC Address	IP Address
3927000569	00-03-EA-11-45-F9	192.168.0.29
3927145099	00-03-EA-13-7A-8B	192.168.0.34
3927150530	00-03-EA-13-8F-C2	192.168.0.167
3927154045	00-03-EA-13-9D-7D	192.168.0.35
3927193225	00-03-EA-14-36-89	192.168.0.198
3927196066	00-03-EA-14-41-A2	192.168.0.132
3927213199	00-03-EA-14-84-8F	192.168.0.32

2.2 Network Settings

- When connecting the NetAgent for the first time, ensure IP address and other network setting are correctly entered in order to login to the NetAgent's webpage via browser or HyperTerminal
- When select to obtain IP address by DHCP or BOOTP, IP address and other network parameter will be assign by the network
- NetAgent offers 4 network protocols - HTTP / HTTPS / TELNET / SSH for management with security consideration. If any change on port number, the it require to enter the full IP address with port number in order to login
For example : HTTP port number change to 81
The full address to be enter on browser should be "http://X.X.X.X:81"
(X.X.X.X is the IP address of the NetAgent)
For Example : Telnet port number change to 24
The full address to be enter on HyperTerminal should be "http://X.X.X.X 24" (X.X.X.X is the IP address of the NetAgent)
- When password of the NetAgent is enabled, it is necessary to enter the correct password before making any configuration change and firmware upgrade

The image shows a screenshot of the Netility web interface with several callouts and annotations. The main interface has a sidebar with buttons for 'Launch Web User Interface', 'Network Settings', 'Firmware Upgrade', and 'About'. A table of device information is displayed, and a 'Configure' dialog box is open for IP address configuration.

1. Click on specific NetAgent

2. Click on Network Settings

Serial Number	MAC Address	IP Address
3926444847	00-03-EA-08-CB-2F	192.168.1.107
3927177694	00-03-EA-13-F9-DE	192.168.1.105
3927225097	00-03-EA-14-B3-09	169.254.70.73

Select to assign IP by DHCP

Columns requires to be entered for Static IP address

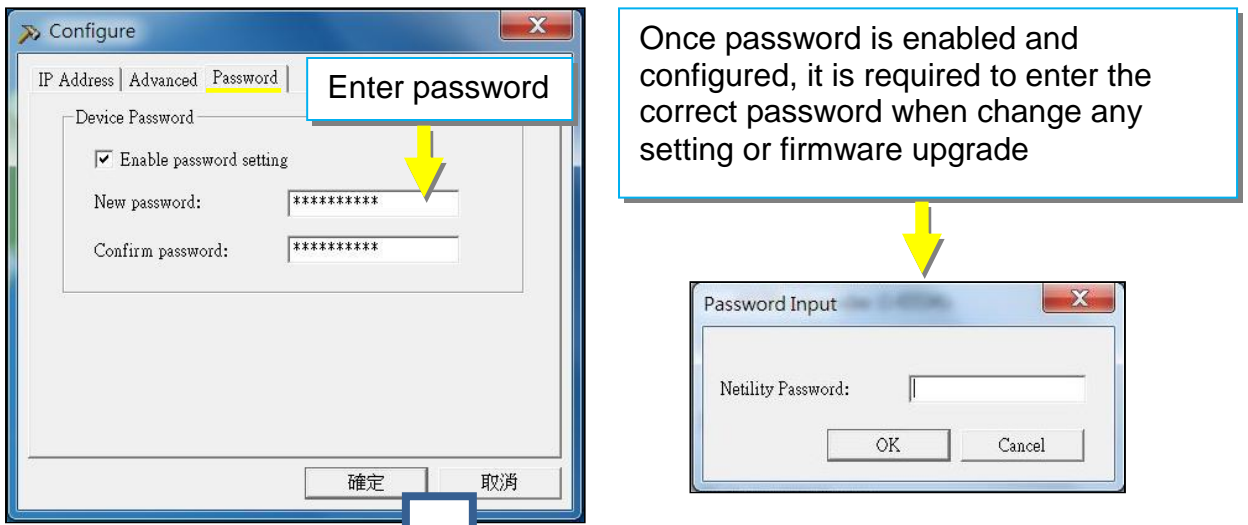

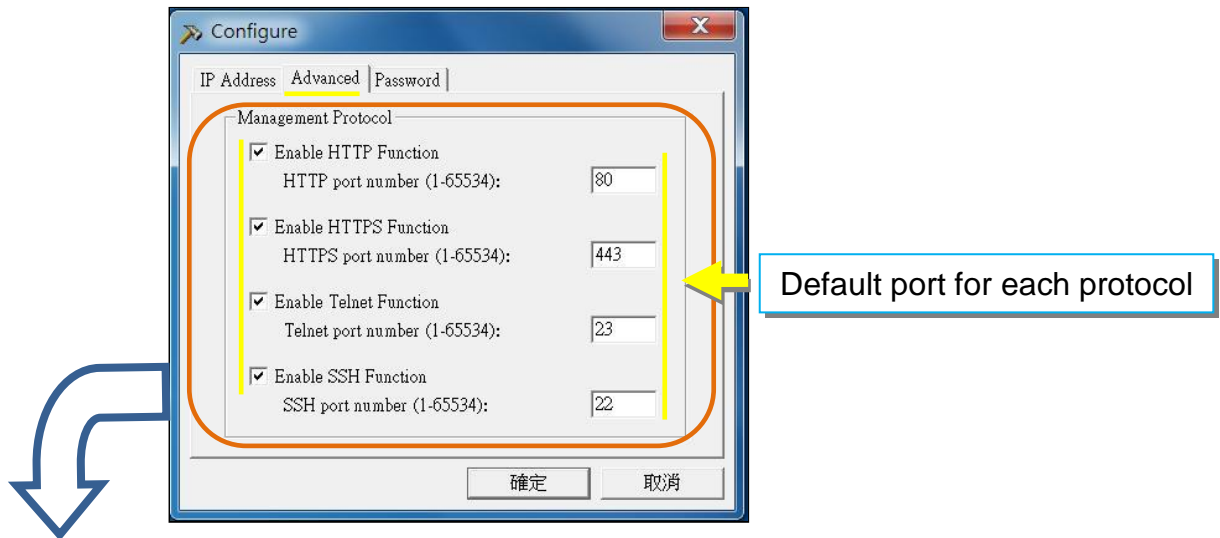

Configure dialog box (IP Address tab):

- Obtain IP address by DHCP
- Obtain IP address by BOOTP
- Use following Static IP address

Static IP Address fields:

- IP Address: 192 . 168 . 1 . 110
- Subnet Mask: 255 . 255 . 255 . 0
- Gateway: 192 . 168 . 1 . 1

Buttons: 確定 (OK), 取消 (Cancel)

2.3 Firmware Upgrade

- This is to upgrade or re-load the firmware to the NetAgent unit. Firmware version is available on the official website. Ensure to check the NetAgent model, hardware version for the correct firmware version (.bin)
- Ways to select NetAgent for firmware upgrading
 - (1) Click on specific NetAgent from the Netility list
 - (2) Press and hold on CTRL key then select multi NetAgent unit from the list=>This is to upgrade multi units at once
 - (3) Click on the first NetAgent from the list, then press and hold on SHIFT key as well as click on the last unit of the NetAgent =>This is if all NetAgent from the list are same model

⚠ WARNING : Please makes sure the multi NetAgent selected are same model

- If any failure during firmware upgrading, please upgrade again until it is successfully done
- While upgrading, red and yellow LED would alternating flashing, or red led flashing. DO NOT remove any power or cable to the NetAgent. Once firmware is successfully upgraded, NetAgent would reboot automatically.

Upgrade Single NetAgent

Selection of Multi-NetAgent

Upgrade consecutive NetAgent

1. Select .bin file

2. Click on Download

3. Upgrade message

4. Cancel to exit

■ Web Interface Display

4.4.2 NetAgent Option Directory Structure

4.4.3 NetAgent Setting Options

- Information > System Status
- **System Information**

Here shows all the basic information of the NetAgent such as hardware / firmware version; Serial Number; Uptime...etc.

NetAgent 9 Mini & NetAgent 9

The screenshot shows the NetAgent IX web interface in a browser window. The address bar shows 'http://192.168.0.224/'. The page title is 'NetAgent IX'. A 'Latest Events' box in the top right corner contains the following text:

```
[06:40:24] Server address can not be resolved.
[06:40:10] UPS communication has been lost.
[08:22:40] UPS communication has been lost.
```

The main content area is titled 'Information > System Status' and has two tabs: 'System Information' (selected) and 'Network Status'. The 'System Information' tab displays the following data:

Hardware Version	HBY506	UPS Last Self Test	--
Firmware Version	3.5.BY506	UPS Next Self Test	--
Serial Number	3927225097	UPS Critical Load	80 %
System Name	UPS Agent	UPS Critical Temperature	70.0 °C
System Contact	Administrator	UPS Critical Capacity	10 %
Location	My Office		
System Time	2017/04/30 07:08:10		
Uptime	1 day(s) 00:33:15		

Below the table, there is a warning message: 'Warning will be initiated 10 minute(s) before Scheduled Shutdown Event' and a checkbox for 'Send Email for Daily Report (No)'. A 'Help' button is located at the bottom right of the main content area.

NetAgent Mini & NetAgent II

The screenshot shows the NetAgent web interface. The page title is 'NetAgent' and the sub-page title is 'System Status'. The left sidebar contains a navigation menu with the following items:

- Information
 - System Status
 - Basic Information
 - Current Status
 - Remote Control
 - Meter/Chart
 - Modem Status
 - NetSwitch Status
 - NetFeeler II
- Configuration
- Log Information
- Help

The main content area displays 'System Information' and 'Network Status' tables. The 'System Information' table is highlighted with a yellow border and contains the following data:

Hardware Version	HBP506	UPS Last Self Test	--
Firmware Version	2.48.BP506.EAST	UPS Next Self Test	--
Serial Number	3926040547	UPS Critical Load	80 %
System Name	UPS Agent	UPS Critical Temperature	70.0 °C
System Contact	Administrator	UPS Critical Capacity	10 %
Location	My Office		
System Time	2017/05/01 13:20:14		
Uptime	00:03:37		

Below the table, there is a warning message: 'Warning will be initiated 10 minute(s) before Scheduled Shutdown Event' and a checkbox for 'Send Email for Daily Report (No)'. The 'Network Status' table contains the following data:

MAC Address	00:03:EA:02:9F:E3	Primary DNS Server	192.168.0.1
Connection Type	100Mbps Full-Duplex	Secondary DNS Server	
IP Address	192.168.0.106	Time Server	time.nist.gov
Subnet Mask	255.255.255.0	PPPoE IP	
Gateway	192.168.0.1		
Email Server			

A 'Help' button is located at the bottom right of the main content area.

- **Network Status**

This page shows the network information of the NetAgent. With NetAgent9 series which supports IPv6 could work with compatible network appliance.

NetAgent 9 Mini & NetAgent 9

The screenshot shows the 'System Status' page for NetAgent 9. The left sidebar contains navigation options: Information (System Status, Basic Information, Current Status, Remote Control, Meter/Chart, SMS Modem Status, NetSwitch Status, NetFeeler), Configuration, Log Information, and Help. The main content area is titled 'Information > System Status' and has two tabs: 'System Information' and 'Network Status'. The 'Network Status' tab is active, displaying four panels: Ethernet, General, IPv4, and IPv6.

Ethernet		General	
MAC Address	00:03:EA:14:B3:09	Email Server	
Connection Type	100Mbps Full-Duplex	Time Server	time.nist.gov
		PPPoE IP	
		PPPoE IPv6	

IPv4		IPv6	
IP Address	192.168.0.224	IP Address	
Subnet Mask	255.255.255.0	LinkLocal Address	fe80::203:eaff:fe14:b309/64
Gateway	192.168.0.2	6to4 Address	
Primary DNS Server	192.168.0.2	Gateway	
Secondary DNS Server		Primary DNS Server	
		Secondary DNS Server	

A 'Help' button is located at the bottom right of the page.

NetAgent Mini & NetAgent II

The screenshot shows the 'System Status' page for NetAgent Mini & NetAgent II. The left sidebar contains navigation options: Information (System Status, Basic Information, Current Status, Remote Control, Meter/Chart, Modem Status, NetFeeler II), Configuration, Log Information, and Help. The main content area is titled 'NetAgent System Status' and has two tabs: 'System Information' and 'Network Status'. The 'Network Status' tab is active and highlighted with a yellow border, displaying network configuration details.

■ **Information > Current Status**

This page shows current UPS Input / Output and Battery Status. Status refresh time can be configured. When abnormal condition occurs, it shows in red.

NetAgent 9 Mini & NetAgent 9

The screenshot shows the 'Information > Current Status' page. On the left is a navigation menu with categories: Information (System Status, Basic Information, Current Status, Remote Control, Meter/Chart, SMS Modem Status, NetSwitch Status, NetFeeler), Configuration, Log Information, and Help. The main content area has tabs for 'Input Status', 'Output Status', and 'Battery Status'. Under 'Input Status', there is a table:

AC Status	Normal	
Input Line Voltage	220.1 V	
Input Max. Line Voltage	220.1 V	
Input Min. Line Voltage	220.1 V	
Input Frequency	50.0 Hz	

Below the table, 'UPS Status' is shown as 'UPS Normal'. A dropdown menu for 'Refresh status every' is open, showing options: 2 seconds, 5 seconds, 10 seconds (selected), 30 seconds, and 1 minute. A 'Help' button is visible. A yellow box highlights the 'Refresh status every' dropdown, and a yellow arrow points to it from the dropdown menu.

NetAgent Mini & NetAgent II

The screenshot shows the 'NetAgent' interface with the 'Current Status' page. The left navigation menu includes: Information (System Status, Basic Information, Current Status, Remote Control, Meter/Chart, Modem Status, NetFeeler II), Configuration, Log Information, and Help. At the top right, it says 'Current Status'. Below the navigation, there is a 'Refresh status every' dropdown set to '10 seconds'. The main content area displays the following status information:

UPS Status: UPS Normal

Input Status

AC Status	On Battery
Input Line Voltage	220.1 V
Input Max. Line Voltage	220.1 V
Input Min. Line Voltage	220.1 V
Input Frequency	50.0 Hz

Output Status

Output Voltage	220.1 V
Output Status	On Battery
UPS load	30 %

Battery Status

Temperature	30.1 °C (86.1 °F)
Battery Status	Battery Low
Battery Capacity	100 %
Battery Voltage	325.2 V
Time on Battery	00:02:14
Estimated Battery Remaining Time	1 day(s) 09:20:00
UPS Last Self Test	--
UPS Next Self Test	--

A 'Help' button is located at the bottom right.

Information > Remote Control

Here, user can perform several test to the UPS remotely. Once the option is selected, please click on Apply in order to execute it.

NetAgent 9 Mini & NetAgent 9

The screenshot displays the 'Information > Remote Control' interface for NetAgent 9. On the left is a navigation menu with categories: Information (System Status, Basic Information, Current Status, Remote Control, Meter/Chart, SMS Modem Status, NetSwitch Status, NetFeeler), Configuration, Log Information, and Help. The main content area is titled 'Information > Remote Control' and contains two sections: 'UPS Testing' and 'Miscellaneous'. The 'UPS Testing' section has radio buttons for '10-Second Test' (selected), 'Deep Battery Test for 10 minute(s)', 'Test until battery capacity below 10 %', 'Test Until Battery Low', and 'Cancel Test'. The 'Miscellaneous' section has radio buttons for 'Turn off UPS when AC power Fails', 'Put UPS in Sleep mode for 60 minute(s)', 'Wake up UPS', 'Reboot UPS', and 'UPS Buzzer On/Off'. At the bottom, a 'Select and Apply' callout box with a yellow arrow points to the 'Apply' button, which is highlighted with a yellow border. Other buttons 'Reset' and 'Help' are also visible.

NetAgent Mini & NetAgent II

The screenshot displays the 'Remote Control' interface for NetAgent Mini & NetAgent II. The top left shows the 'NetAgent' logo and the top right shows 'Remote Control'. On the left is a navigation menu with categories: Information (System Status, Basic Information, Current Status, Remote Control, Meter/Chart, Modem Status, NetFeeler II), Configuration, Log Information, and Help. The main content area contains two sections: 'UPS Testing' and 'Miscellaneous'. The 'UPS Testing' section has radio buttons for '10-Second Test' (selected), 'Deep Battery Test for 10 minute(s)', 'Test until battery capacity below 10 %', 'Test Until Battery Low', and 'Cancel Test'. The 'Miscellaneous' section has radio buttons for 'Turn off UPS when AC power Fails', 'Put UPS in Sleep mode for 60 minute(s)', 'Wake up UPS', 'Reboot UPS', and 'UPS Buzzer On/Off'. At the bottom, a 'Select and Apply' callout box with a yellow arrow points to the 'Apply' button, which is highlighted with a yellow border. Other buttons 'Reset' and 'Help' are also visible.

Security7 Status	Normal

■ **Configuration > UPS Configuration**

- UPS Properties (Please refer to your UPS specification)

UPS Communication Type:

In order to let NetAgent and UPS to establish the communication, select the compatible protocol which your UPS supported from the list. Wrong protocol selected would cause no communication at all. (Megatec is default protocol)

Number of Batteries :

Enter the number of battery that the UPS has.

Battery Full Charge Voltage (V) :

Enter the number of the full charged voltage per battery cell. (2.267 is default, this is recommended not to be change)

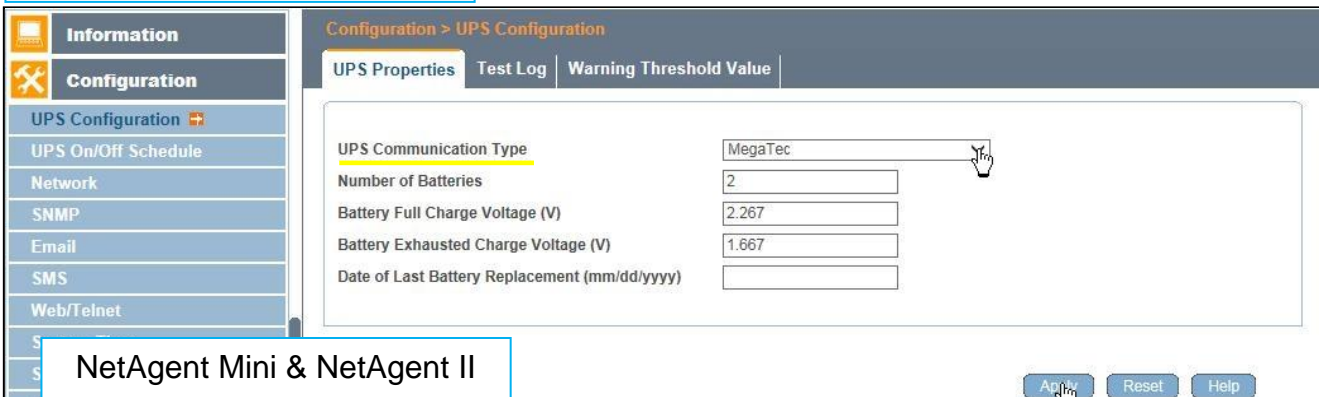

Battery Exhausted Charge Voltage(V) :

Enter the number of exhausted voltage per battery cell. (1.667 is default, this is recommended not to be change)

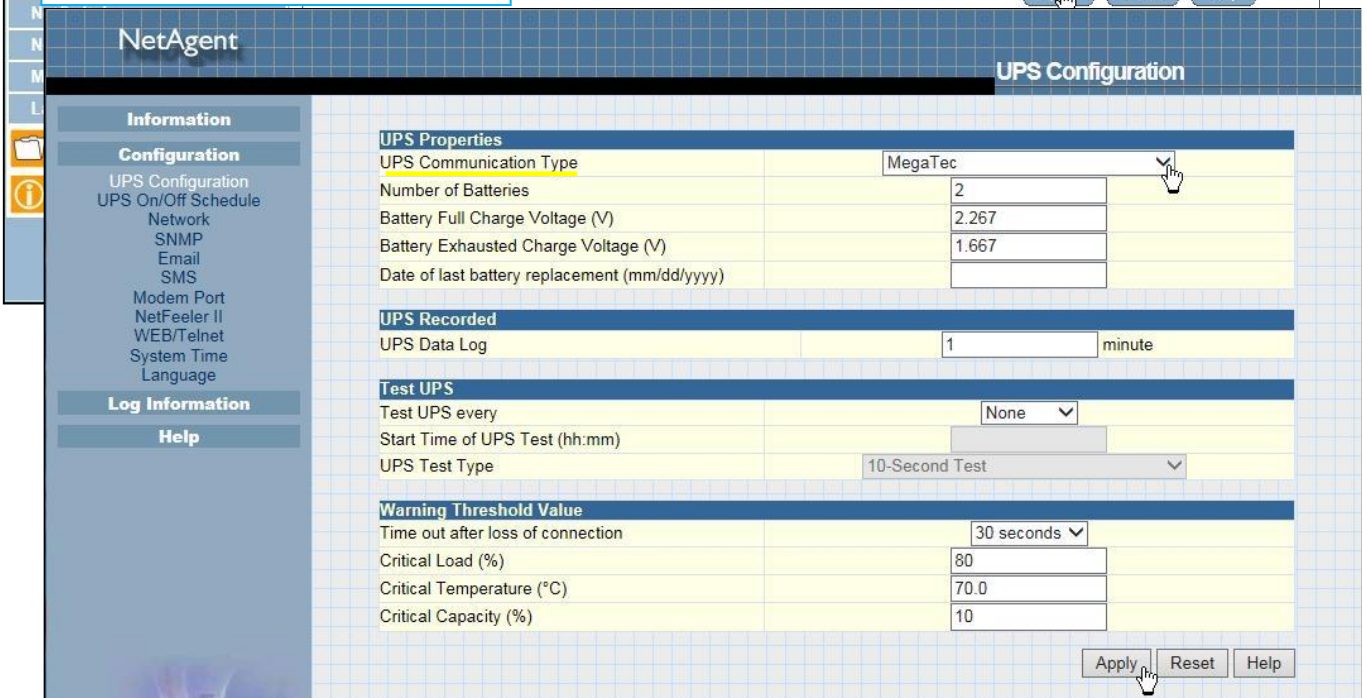

Date of Last Battery replacement(mm/dd/yyyy) :

Enter the date of last battery replacement for record

NetAgent 9 Mini & NetAgent 9

NetAgent Mini & NetAgent II

- Test Log

Test UPS Every :

Week /2 Weeks/ Month / Quarter UPS can be selected

Start Time of UPS Test (hh:mm) :

To enter the time to begin the test

UPS Test Type :

Test option can be select from the drop down list

UPS Data Log :

To enter the time interval to refreshing data

NetAgent 9 Mini & NetAgent 9

NetAgent Mini & NetAgent II

- Warning Threshold Values

Time out after loss of connection :

Send warning alarm when NetAgent and UPS lost connection at this configured time

Critical Load(%) :

When loading reaches at this % configured, NetAgent will send warning alarm

UPS Temperature (°C) :

When UPS temperature reaches at this degree configured, NetAgent will send warning alarm

Critical Capacity (%) :

When UPS battery capacity reaches at this % configured, NetAgent will send warning alarm

NetAgent 9 Mini & NetAgent 9

The screenshot shows the 'Warning Threshold Value' configuration page for NetAgent 9 Mini & NetAgent 9. The page is titled 'Configuration > UPS Configuration' and has three tabs: 'UPS Properties', 'Test Log', and 'Warning Threshold Value'. The 'Warning Threshold Value' tab is active, displaying the following settings:

Time out after loss of connection	30 seconds
Critical Load (%)	80
Critical Temperature (°C)	70.0
Critical Capacity (%)	10

At the bottom right of the configuration area, there are three buttons: 'Apply', 'Reset', and 'Help'. A mouse cursor is pointing at the 'Apply' button.

NetAgent Mini & NetAgent II

The screenshot shows the 'UPS Configuration' page for NetAgent Mini & NetAgent II. The page is titled 'NetAgent' and 'UPS Configuration'. The left sidebar contains a navigation menu with the following items:

- Information
- Configuration
 - UPS Configuration
 - UPS On/Off Schedule
 - Network
 - SNMP
 - Email
 - SMS
 - Modem Port
 - NetFeeler II
 - WEB/Telnet
 - System Time
 - Language
- Log Information
- Help

The main content area is divided into several sections:

- UPS Properties:**
 - UPS Communication Type: MegaTec
 - Number of Batteries: 2
 - Battery Full Charge Voltage (V): 2.267
 - Battery Exhausted Charge Voltage (V): 1.667
 - Date of last battery replacement (mm/dd/yyyy):
- UPS Recorded:**
 - UPS Data Log: 1 minute
- Test UPS:**
 - Test UPS every: None
 - Start Time of UPS Test (hh:mm):
 - UPS Test Type: 10-Second Test
- Warning Threshold Value (highlighted in yellow):**
 - Time out after loss of connection: 30 seconds
 - Critical Load (%): 80
 - Critical Temperature (°C): 70.0
 - Critical Capacity (%): 10

At the bottom right of the configuration area, there are three buttons: 'Apply', 'Reset', and 'Help'. A mouse cursor is pointing at the 'Apply' button.

■ Configuration > UPS On/Off Schedule

● UPS Action

When selected event happens at configured time range, UPS will be shut down

■ Configuration > Network

This page is to set NetAgent Network settings.

● IPv4

NetAgent and DNS IP address can be obtain by drop down list with option of Manually , Using DHCP, or Bootp. If the IP address and DNS has been configured on Netility, then info will automatically show here

NetAgent 9 Mini & NetAgent 9

The screenshot shows the 'Configuration > Network' page for NetAgent 9 Mini & NetAgent 9. The 'IPv4' tab is selected. The 'IP Address' section shows fields for IP Address (192.168.1.100), Subnet Mask (255.255.255.0), and Gateway (192.168.1.1). The 'Obtain an IP address' dropdown is set to 'Manually', with a yellow arrow pointing to a callout box that says 'Manually Using DHCP Using Bootp'. The 'DNS Server IP' section shows fields for Primary DNS Server IP (168.95.1.1) and Secondary DNS Server IP (8.8.8.8). The 'Obtain DNS Server IP' dropdown is set to 'Manually', with a yellow arrow pointing to a callout box that says 'Manually Automatically'. At the bottom right, there are 'Apply', 'Reset', and 'Help' buttons, with 'Apply' highlighted by a yellow box.

NetAgent Mini & NetAgent II

The screenshot shows the 'Configuration > Network' page for NetAgent Mini & NetAgent II. The 'IPv4' tab is selected. The 'IP Address' section shows fields for IP Address (192.168.1.100), Subnet Mask (255.255.255.0), and Gateway (192.168.1.1). The 'Obtain an IP address*' dropdown is set to 'Manually', with a yellow arrow pointing to a callout box that says 'Manually Using DHCP Using Bootp'. The 'DNS Server IP' section shows fields for Primary DNS Server IP (192.168.1.100) and Secondary DNS Server IP (8.8.8.8). Below this, the 'Ethernet' section shows 'Connection Type*' set to 'Auto Sense' and 'Stop UPS communication when Ethernet disconnected' set to 'No'. A yellow box highlights the IP Address and DNS Server IP sections.

- IPv6

All NetAgent 9 series supports IPv6. IP address can be obtain from the drop down list with option of (Automatic/ Stateless DHCPV6/ DHCPV6/ Manual)

☀ Once click on Apply, NetAgent will reboot

- Dynamic DNS

This is a free service that allows the user to alias a dynamic IP address to a static hostname. Ensure account/password has been registered from the DNS service provider

Service Provider

Dynamic DNS providers can be select from the list

Domain Name

This is the Domain Name you have created from the above selected DDNS provider

Login Name

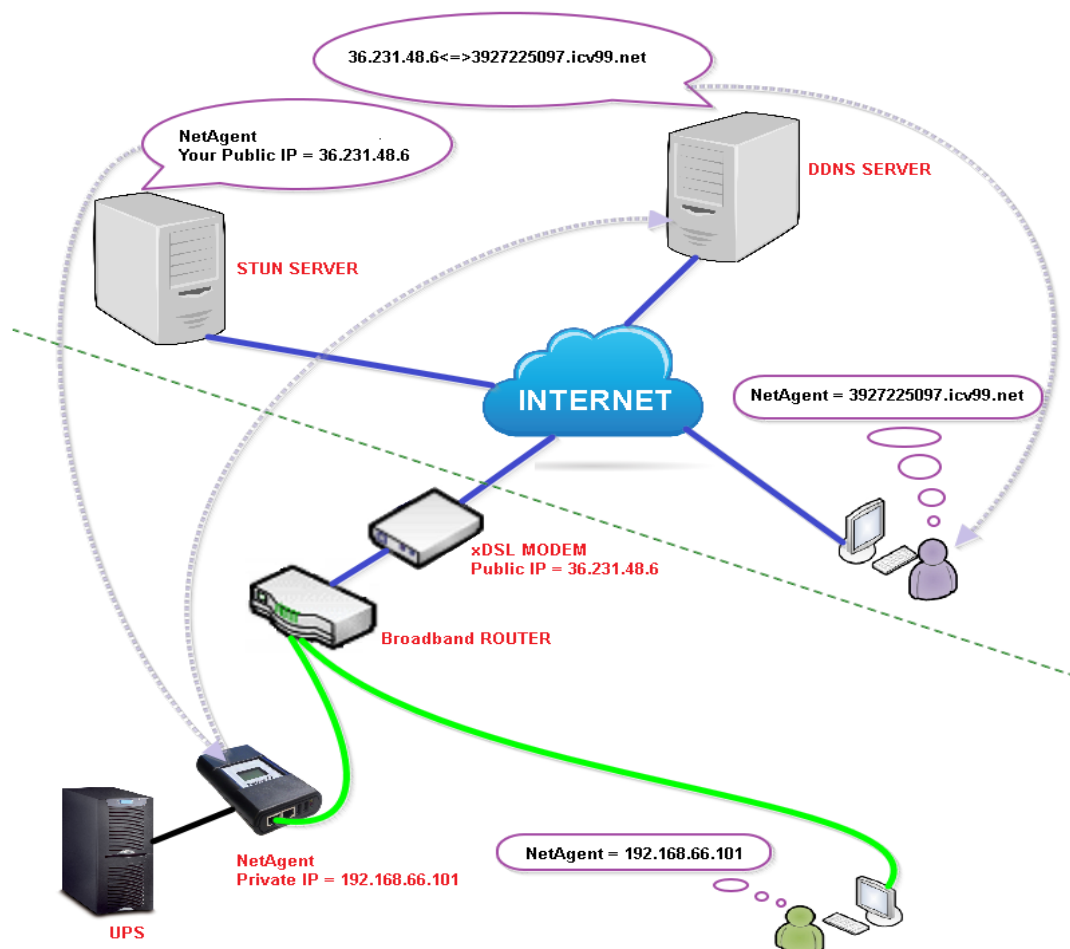

This is the Login / Account name that you have created with the selected DDNS provider.

Login Password:

Enter the Password you have assigned to your DDNS Account.

Use external STUN server to get Public IP to register

Choose **Yes** to ensure that NetAgent uses the WAN / Public IP to update the selected DDNS server

If to use icv99.net as Service Provide which host by Megatec, instruction asb elow:

1. Ensure NetAgent is able to connect to Internet. Select icv99.net from the drop down list of the Service Provider. The Domain Name and Login Name will automatically be fill-in with serial number of the device. Enter the password of the NetAgent which is printed on the NetAgent label, then click Apply.

NetAgent 9 Mini & NetAgent 9

4.Registration complete

1.Select icv99.net

2. Enter password

3. Click Apply

Service Provider: icv99.net
 Domain Name: 3927225097.icv99.net
 Login Name: 3927225097

****	public	Read	

The 'Apply' button is highlighted with a yellow border.

- Trap Notification

Trap Notification

Destination IP Address :

To set receivers IP address for receiving traps sent by NetAgent. It is valid for up to 8 IP Addresses.

Accept :

Select the trap type of its SNMP version or Inform from drop down list. When SNMPv3 trap or SNMPv3 Inform is selected, username/password and authentication information are required.

Community :

Trap receiver and NetAgent must be same community. (Default is public)

Trap Type :

Select from PPC MIB or RFC1628 MIB (Default is PPC)

✳MIB file is available in the CD provided with NetAgent

Severity :

This section is to set Trap level for each receiver. There are three levels as below

- Information: To receive all traps.
- Warning: To receive only “warning” and “severe” traps.
- Severe: To receive only “severe” traps.
(Please refer to NMS manual for Trap levels.)

Description :

This is to make note for administrator’s reference

Events :

This is to select events for NetAgent to send traps. Click on Select to show the full Events List. Click on Test to send test trap to ensure all setting is correct

Send Power Restore and Adaptor Restore Traps for X time(s) in X second(s) Interval.

This is to set number of trap to send in preset second when power restore on NetAgent. This is to check if the communication between trap receiver and NetAgent remains well or not after power recovers

SNMP Inform Request

This is to set the number of times that the NetAgent can request a response from the sending Inform host with a preset value . (Default is 3 times and an interval of 5 seconds)

- Send Email when Data Log overflows (500 records): YES

Buttons for 'Apply', 'Reset', and 'Help' are located at the bottom right of the configuration area.

■ Configuration > SMS

When UPS events occurs, it allows Short Message Signals (“SMS”) to be sent and received using a GSM/GPRS/CDMA Modem. Operation information are as below for single and three ports of NetAgent.

● SMS Setting :

Send SMS When Event Occurs:

- Disable : No SMS Service
- Use Local Modem : When GSM modem is connected to NetAgent directly
(Refer to SMS Modem section for its installation)
- Use Remote Service : When GSM modem connects to PC with SMS Server software installed
(Refer to SMS Server section for SMS Server Software installation)

SMS Server :

If select to use Remote Service to send SMS, then enter the IP address of the SMS Server. (The PC that installed SMS Server Software)

SMS Port :

If select to use Remote Service to send SMS, enter the port number that SMS Server uses for sending SMS. (Port 80 is default)

Account Name :

If select to use Remote Service to send SMS, enter SMS Server’s account name if required

Password :

If select to use Remote Service to send SMS, enter SMS Server’s password if required

Sending test SMS :

When modem and configuration are ready, enter a mobile number to receive testing SMS

■ Configuration > System Time

This page is to set NetAgent's system time. NetAgent could synchronize with external or internal Time Server.

System Time

Time Between Automatic Updates :

To set an interval for time synchronization.

Time Server :

Time server can be select from the drop down list , or add other time server manually.

Time Zone(Relative to GMT) :

To select its GMT time zone

Using Daylight Saving Time :

Select whether to use the daylight saving time system to adjust the clock for 1 hour in advanced

System Time(yyyy/mm/dd hh:mm:ss) :

To display the current system time/date of NetAgent. Or click on Adjust Now to adjust to the correct time/date automatically

Restart

Auto Restart System for Every (0 is disabled):

NetAgent to restart automatically at preset hour or minute

Manual Restart System After 30 seconds :

Once click on Apply, NetAgent would restart after 30 seconds

NetAgent 9 Mini & NetAgent 9

1. Select Time Server

2. Adjust Now

Add Time Server

NetAgent 9 Mini & NetAgent 9

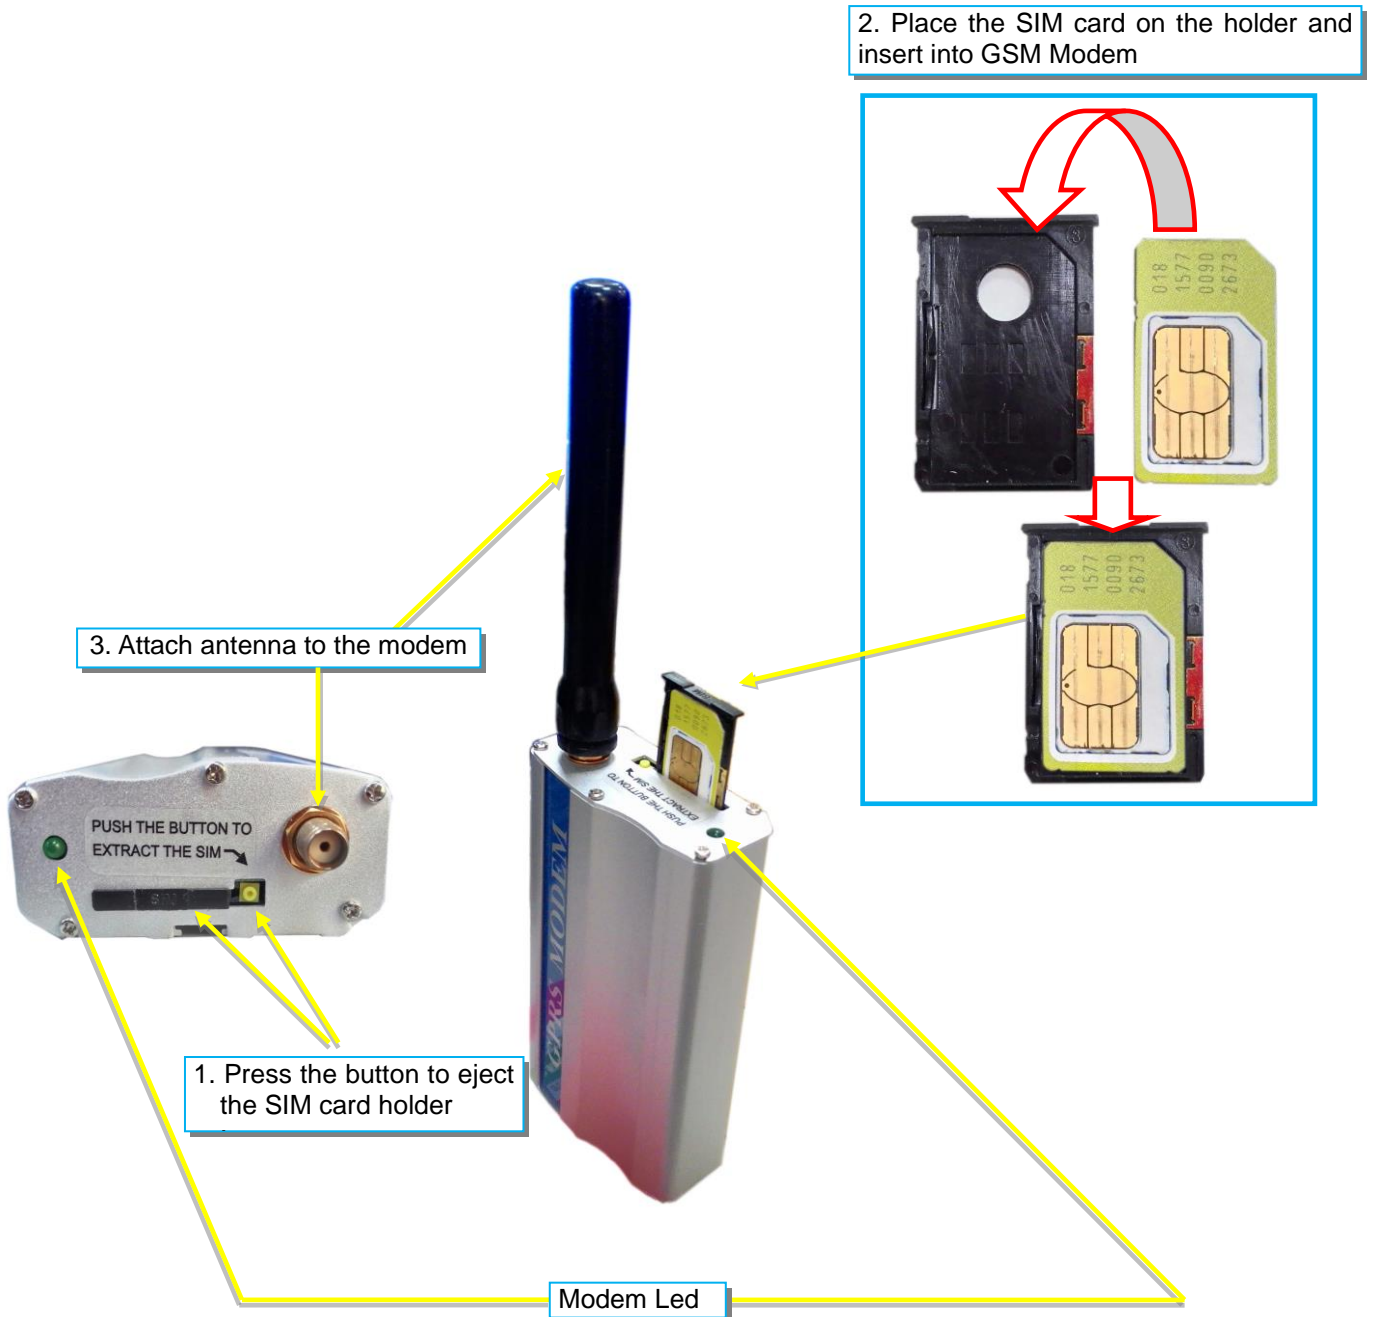

1. Select Time Server

NetSwitchCommunication Port :

Select “ ttyUSB0” for NetSwitch connects with NetAgent 9 directly ;

Select “NetSwitch “ for NetSwitch connects with NetAgent II 3 Ports

☀ **Once click on Apply on NetAgent 3 ports model, NetAgent will reboot**

Select NetSwitch :

Select the NetSwitch number (0~16)

Address Change :

To adjust the current NetSwitch number (e.g : NetSwitch01 → NetSwitch03)

Identication :

NetSwitch’s ID name

Outlet :

Each NetSwitch as 8 individual outlet with code of A~H

Name :

To enter a name for each outlet for identification

Phone Controllable :

If to control by phone coding (Refer to NetSwitch manual)

Control Type :

The action of each outlet. Safe Shutdown / Safe reboot / Instant Shutdown (Refer to NetSwitch manual for definition of each outlet)

Power Off Delay :

When select safe shutdown and safe reboot, this is to set power off delay for the outlet

Power Resume Daly :

When AC recovers , the time to resume power on the outlet

■ **Configuration > NetFeeler**

NetFeeler is the external optional environmental sensor, It is to detects temperature, humidity and water. Inside NetFeeler, it has RF receiver to work with extension sensors such as smoke, security sensor.

□ NetFeeler Setup

NetFeeler

NetFeeler :

To select NetFeeler type. NetFeeler II / NetFeeler USB

☛ NetAgent 9 can use with NetFeeler II or NetFeeler USB

☛ NetAgent II 3 Ports only to use with NetFeeler II

Humidity/Temperature Critical value :

To set the lowest and highest critical values for temperature and humidity. NetFeeler II will send a warning message when it detects temperature or humidity values below and above these settings.

Security Label

NetFeeler may connect up to 7 security sensors that communicates via RF. This section is to set the location or name of each sensor.

■ **Configuration > MODBUS**

NetAgent supports Modbus on TCP/IP. And NetAgent 9 BY model also supports ModBus on RS485. Through Ethernet and serial communication, it may read multi UPS's data.

Connection illustration as below

□ RS485 2 lines connection(Half Duplex)

□ RS485 4 lines (Full Duplex)

Modbus on TCP

Modbus on TCP Device ID :

Enter device ID to read/write data when using Modbus on TCP communication

Modbus on RS485

Transmission Mode :

To select Modbus communication code RTU or ASCII

Device ID :

Enter device ID

Mode :

To select communicate mode of Full Duplex and Half Duplex

Baud Rate :

Baud Rate of 2400 / 4800 / 9600 / 19200 / 38400 / 57600 bps

Data bits :

Data bits of 8 bits / 7 bits

Parity :

Parity of None/ odd /even

Stop bits :

Stop bits of 1 / 2

NetAgent 9

The screenshot displays the 'Configuration > Modbus' page in NetAgent 9. It is divided into two main sections: 'Modbus on TCP' and 'Modbus on RS485'.
- **Modbus on TCP:** Features a 'Modbus on TCP Device ID' input field with the value '1'.
- **Modbus on RS485:** Contains several configuration options:
 - **Transmission Mode:** A dropdown menu currently set to 'RTU'. A callout box points to the 'Disabled RTU ASCII' option.
 - **Device ID:** An input field with the value '1'.
 - **Mode:** A dropdown menu currently set to 'Full Duplex'. A callout box points to the 'Full Duplex Half Duplex' option.
 - **Baud Rate:** A dropdown menu currently set to '9600'. A callout box points to the '9600' option in the list.
 - **Data bits:** A dropdown menu set to '8'.
 - **Parity:** A dropdown menu set to 'None'.
 - **Stop bits:** A dropdown menu set to '1'.
At the bottom right of the configuration area, there are three buttons: 'Apply' (highlighted with a yellow box), 'Reset', and 'Help'. A vertical sidebar on the left contains navigation options like 'Information', 'Configuration', 'UPS Configuration', 'Network', 'SNMP', 'Email', 'SMS', 'Web/Telnet', 'System Time', 'SMS Modem', 'NetSwitch', 'NetFeeler', 'Modbus', 'Language', 'Log Information', and 'Help'.

■ Configuration > Language

This page is to set the language interface for NetAgent.

Interface Language

To set the language of NetAgent web pages. When first start login to the webpage of NetAgent, NetAgent will auto detects the OS language of the PC and shows the same language on its web pages. Users may choose the language per preference

Note: Users will have to enable cookies before they use this function.

Email Preference

Select language preference when receive emails and SMS.

NetAgent 9 Mini & NetAgent 9

The screenshot shows the 'Configuration > Language' page. On the left is a navigation menu with 'Language' selected. The main content area has 'Interface Language' with radio buttons for English, Deutsch, Português, Español, Français, Italiano, Türkçe, 繁體中文, 簡體中文, 한글, 日本語, Русский, ไทย, and Polska. Below this is an 'Email Preferences' section with a dropdown menu set to 'English'. A yellow arrow points from the 'Apply' button to the dropdown menu. The 'Apply' button is highlighted with a yellow box.

■ **Log Information > Event Log**

It shows record of all events, giving the Date/Time of the event and a detailed description of each. Log capacity is 1000 logs. When reach to the limit, it rewrites on the previous logs. Log can be save as csv file.

csv file name as below

NetAgent 9 → eventlog_year/month.csv , e.g.:eventlog_201706

NetAgent II → eventlog.csv , e.g. : eventlog.csv

NetAgent 9 Mini & NetAgent 9

The screenshot shows the 'Log Information > Event Log' interface. On the left is a navigation menu with 'Event Log' selected. The main area displays a table of events with columns 'Date/Time' and 'Event'. A date filter dropdown is set to '2017/06'. A calendar pop-up shows the months 2017/06, 2017/07, and 2017/08. Below the table are 'Save', 'Clear...', and 'Help' buttons. Annotations include 'Check event by year/month' pointing to the date filter, and 'save.csv file' pointing to the 'Save' button.

Date/Time	Event
2017/06/27 12:06:51	UPS communication has been lost.
2017/06/27 10:47:25	Utility power has been restored.
2017/06/27 10:47:05	UPS has switched to battery power.
2017/06/27 10:46:44	Internal diagnostic self-test passed.
2017/06/27 10:46:28	Internal diagnostic self-test failed.
2017/06/27 10:46:24	The UPS return from...
2017/06/27 10:45:03	The UPS has return...
2017/06/27 10:45:03	The UPS is enterin...
2017/06/27 10:44:38	battery are very low...
2017/06/27 10:44:14	Utility power has been restored.
2017/06/27 10:44:08	UPS has switched to battery power.

The screenshot shows the 'Log Information > Event Log' interface with a list of files: eventlog_201706.dat, eventlog_201707.dat, and eventlog_201708.dat. Each file has a checkbox. Below the list are 'Select All', 'Clear All', and 'Delete' buttons. Annotations include '1. Select dat. file to delete' pointing to the first checkbox and '2. Delete' pointing to the 'Delete' button.

NetAgent Mini & NetAgent II

The screenshot shows the 'NetAgent Event Log' interface. On the left is a navigation menu with 'Event Log' selected. The main area displays a table of events with columns 'Date/Time' and 'Event'. Below the table are 'Clear all log', 'Save', and 'Help' buttons. Annotations include 'Clear all log' pointing to the 'Clear all log' button and 'save.csv file' pointing to the 'Save' button.

Date/Time	Event
2017/06/27 18:10:21	UPS passed internal self-test.
2017/06/27 18:00:28	UPS Test
2017/06/27 17:54:55	UPS communication has been established.
2017/06/27 10:00:18	UPS communication has been lost.
2017/06/27 09:57:20	UPS has switched to battery power.
2017/06/27 09:57:17	UPS communication has been established.
2017/06/27 09:54:19	UPS communication has been lost.
2017/06/27 09:51:22	UPS has switched to battery power.
2017/06/27 09:49:31	UPS communication has been established.
2017/06/27 08:51:50	NetSwitch Communication Lost
2017/06/27 08:51:49	UPS communication has been lost.
2017/06/26 19:01:50	Security5 Alarm

■ Log Information > SMS Log

It shows SMS record of all mobile number, giving the Date/Time of the SMS sent and a detailed description of each. Log capacity is 1000 logs. When reach to the limit, it rewrites on the previous logs.

NetAgent 9 model of BX/BY can save the SMS log as csv file.

csv file as below

smslog_year/month.csv , e.g : smslog_201706.csv

■ Help > Search NetAgent

This to display all the found NetAgent within network with its serial number; Mac Address; Hardware/Firmware version and its IP address. Double click on the highlighted unit to open the webpage of such device.

NetAgent 9 Mini & NetAgent 9

The screenshot shows the 'Help > Search NetAgent' interface. On the left is a navigation menu with 'Information', 'Configuration', 'Log Information', and 'Help'. Under 'Help', there are links for 'Search NetAgent', 'Serial Port Debug', 'Help', and 'About'. The main content area displays a table titled 'Search NetAgent' with the following data:

Device	MAC Address	Hardware	Firmware	IP Address
3926404591	00:03:EA:08:2D:EF	HBT506	2.48.BT506.EAST	192.168.66.102
3927177694	00:03:EA:13:F9:DE	HDY520	3.5.DY520.a	192.168.66.104

Below the table are 'Refresh' and 'Help' buttons. A mouse cursor is hovering over the 'HDY520' hardware entry in the second row.

NetAgent Mini & NetAgent II

The screenshot shows the 'NetAgent' interface with a 'Browse NetAgent' header. On the left is a navigation menu with 'Information', 'Configuration', 'Log Information', and 'Help'. Under 'Help', there are links for 'Search NetAgent', 'Serial Port Debug', 'Help', and 'About'. The main content area displays a table with the following data:

Device	MAC Address	Hardware	Firmware	IP Address
3927177694	00:03:EA:13:F9:DE	HDY520	3.5.DY520.a	192.168.66.104
3927225097	00:03:EA:14:B3:09	HBY506	3.5.BY506	192.168.66.103

Below the table are 'Refresh' and 'Help' buttons. A mouse cursor is hovering over the 'HBY506' hardware entry in the second row.

■ Help > Serial Port Debug

It shows the communication status between NetAgent and UPS by Sent and Received columns. Command can send automatically by NetAgent, or manually enter the command to UPS. (Java is required)

Port Information

This is to configure the communication parameter between NetAgent and UPS. Parameters are Debug Mode; Port; Speed (Baud), Data Bits;Parity and Stop Bits. Two encoding formats: ASCII or Hexadecimal.

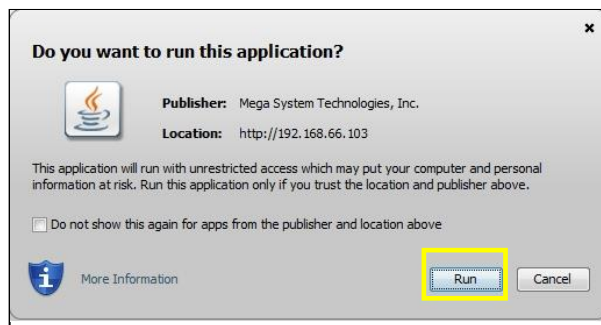

If Debug mode is set as manually, user may enter its parameter under Send Contents column.

Sent Information

This column shows the real time sent command

Received Information

This display the response that NetAgent receives from UPS

■ Help > Help

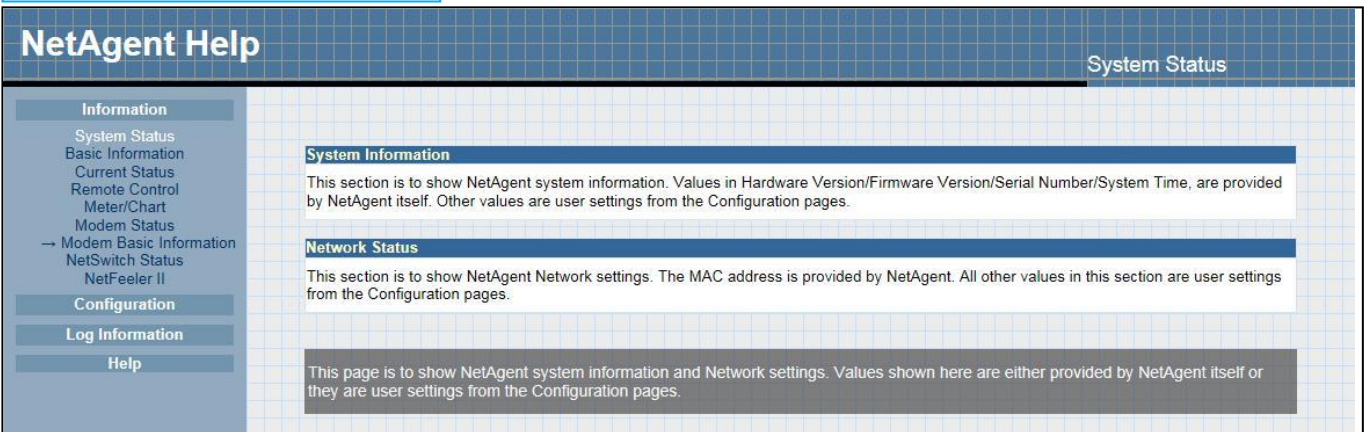

This is to help to illustrate each feature/option that NetAgent offers

NetAgent 9 Mini & NetAgent 9

The screenshot shows the help page for NetAgent 9 Mini & NetAgent 9. On the left is a navigation menu with the following items: Information (System Status, Basic Information, Current Status, Remote Control, Meter/Chart, SMS Modem Status, Modem Basic Info., NetSwitch Status, NetFeeler II), Configuration, Log Information, and Help. The main content area is titled 'System Status' and contains three sections: 'System Information' (describing hardware and user settings), 'Network Status' (describing network settings and MAC address), and 'Wireless Status' (noting it is only for BX Models and showing wireless network information). A summary paragraph at the bottom states that the page shows system and network settings provided by NetAgent or user settings.

NetAgent Mini & NetAgent II

The screenshot shows the help page for NetAgent Mini & NetAgent II. The page has a blue header with 'NetAgent Help' on the left and 'System Status' on the right. The left navigation menu includes: Information (System Status, Basic Information, Current Status, Remote Control, Meter/Chart, Modem Status, Modem Basic Information, NetSwitch Status, NetFeeler II), Configuration, Log Information, and Help. The main content area contains three sections: 'System Information', 'Network Status', and a summary paragraph at the bottom. The text in these sections is identical to the previous screenshot, describing system and network settings.

■ Help > About

About

It shows NetAgent's hardware/firmware and serial number.

Save/Restore Settings

Save Current Configuration

Click on Save to save the configuration to your PC. The text file will have a default format of YYYY_MMDD_####.cfg. Administrator permission required.

Restore previous configuration

Use this function to restore a *.cfg configuration that has been saved earlier. Click Browse... to the location of the file and click **Restore**.

Reset to factory default

This function will reset all settings to its default value.

8. Set Web and Telnet User Account.
9. Set E-mail.
a. Reset Configuration to Default & Reboot
b. Set Environment Group.
c. Save & Reboot.
0. Exit Without Saving.

Select => 1  ← Select
```

1.Set IP Address :

This function allows you to setup IP Address, Gateway Address, Subnet Mask

2.Set SNMP MIB System :

To set the MIB system group parameters.

3.Set SNMP Access Control :

To set the Manager IP, Community, Access Permission.

4.Set SNMP Trap Notification :

To set Trap notification

5.Set UPS Properties :

To setup the Communication Type of UPS, UPS Device Name and Battery Replacement Date.

6.Set UPS Device Connect :

To setup the System Name, Rating which connected., Connected.

7.Set System Time & Time Server :

To setup the System date, time and two time servers.

8.Set Web and Telnet user Account :

This is allows to set users account's authority.

9.Set E-mail :

To set e-mail accounts to receive power event notification for emergency management.

a.Reset configuration to Default & Reboot :

Set all values to their default settings.

b.Set Environment Group :

To set critical value for environmental sensor

c.Save & Reboot :

Save the current configuration data, including any changes you have made, and reboot the Net Agent.

0.Exit Without Saving :

Exit, all configuration changes will be lost

Chapter 6. ClientMate

ClientMate is shutdown software for PC that connects with NetAgent. This utility is for the Windows platform. When the ClientMate gets the power failure signal from the NetAgent. The ClientMate will save the files and shutdown the system gracefully. When the hardware installation of the NetAgent has been completed, install the ClientMate on any of the Windows system on the network. When ClientMate detects AC Fail, Battery Low, Schedule Shutdown signals from the NetAgent, it will save the file and shutdown the system gracefully to avoid system crash.

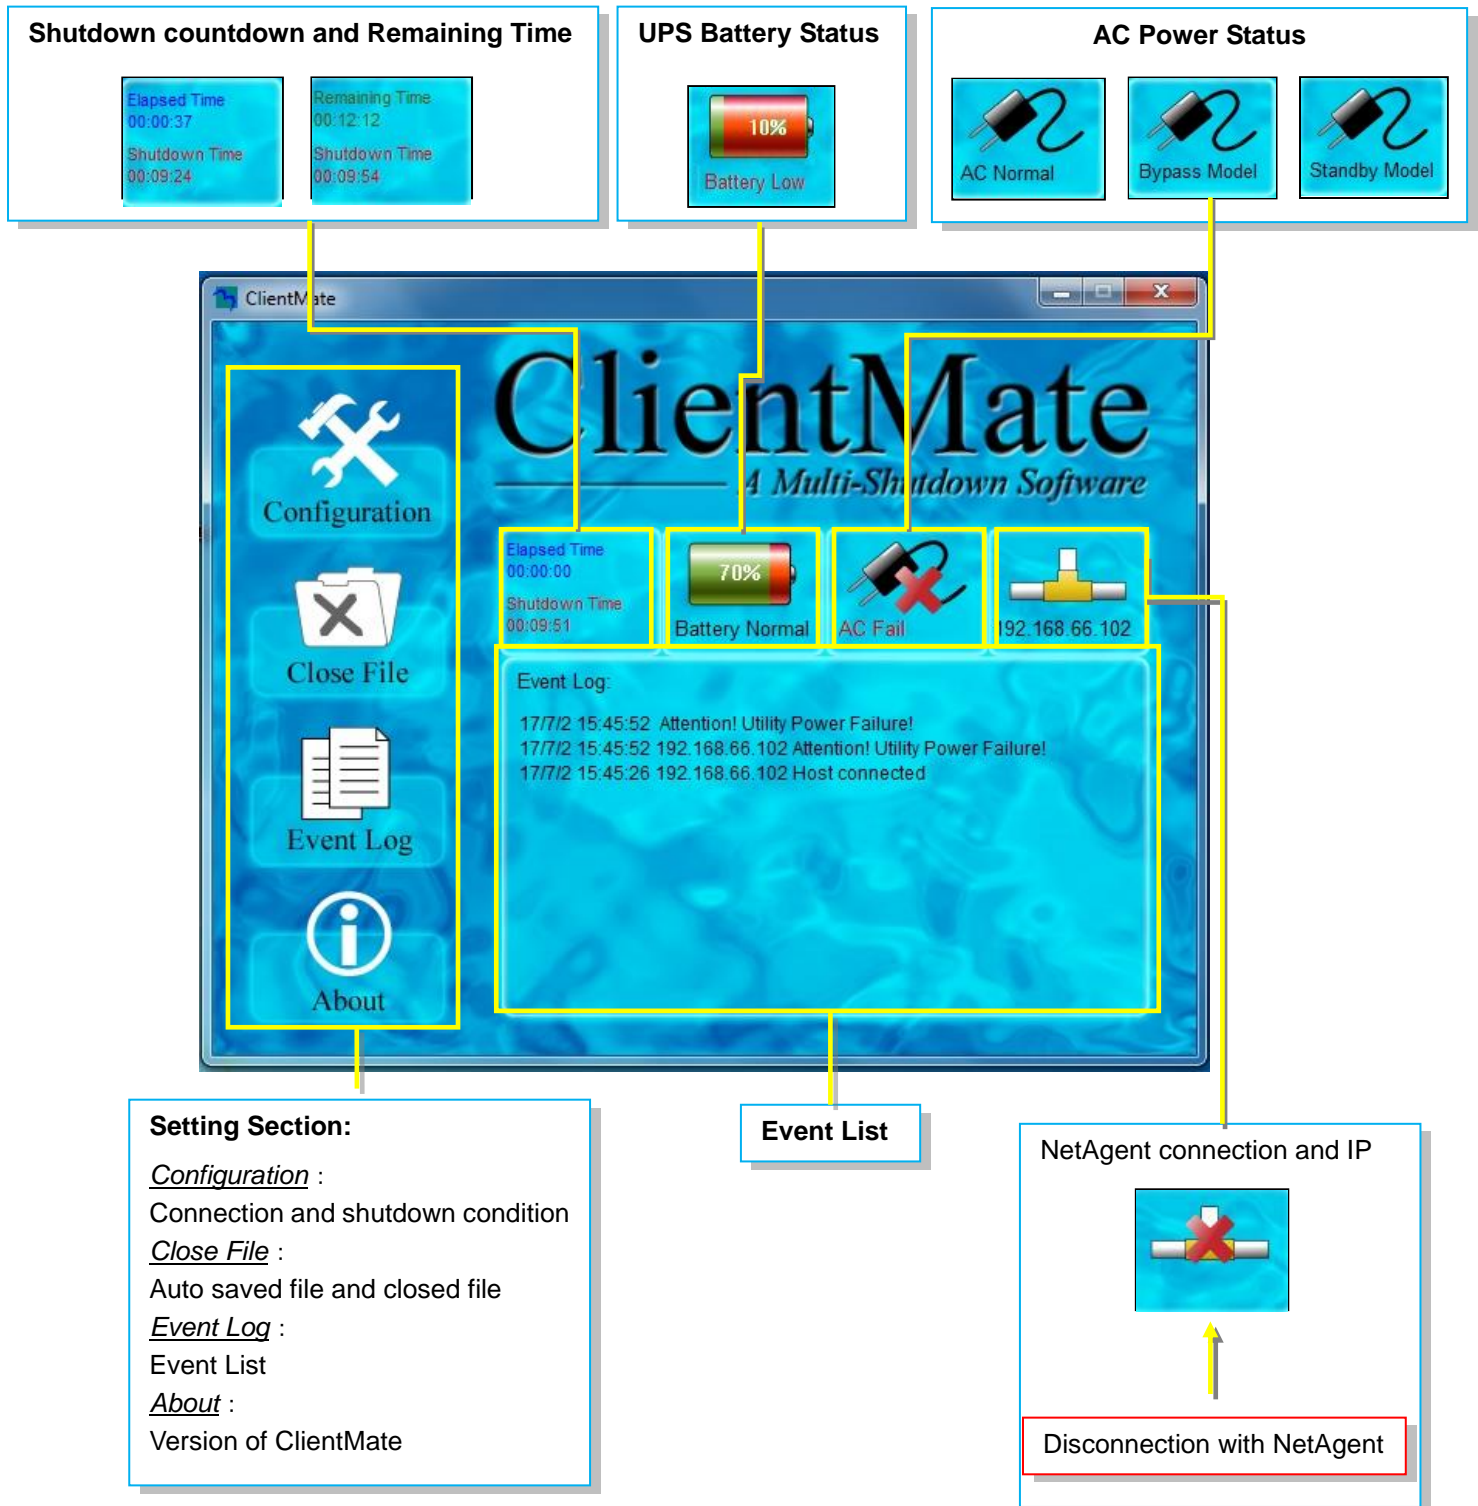

Installation and setup

ClientMate software is available in the CD provided with NetAgent. After installed, it save under directory of

All Program > NetAgent > ClientMate > ClientMate for Windows

Operation Interface

Configuration

The image illustrates the configuration process in ClientMate software. It shows three main windows: the main ClientMate interface, the 'Configure' dialog, and the 'Add' dialog.

ClientMate Main Interface: The 'Configuration' button is highlighted with a yellow box. Other buttons include 'Close File' and 'Event Log'.

Configure Dialog: This dialog has tabs for 'General', 'Power Failure', and 'Schedule Shutdown'. The 'Host Connection' section contains a table with columns 'Host address', 'SNMP Port', and 'Connection Type'. Below the table are 'Add', 'Modify', and 'Remove' buttons. A callout box points to the 'Add' button with the text: "Click Add to add NetAgent device".

Add Dialog: This dialog is used to add a new host connection. It has a 'Host Connection' section with radio buttons for 'SNMP V1/V2', 'SNMP V3', and 'UPSilon/RUPS'. The 'SNMP V1/V2' option is selected. Other fields include 'User Name', 'Password', 'Authenticate' (set to MD5), and 'Privacy' (set to DES). The 'Host' field contains '192.168.66.102' and the 'SNMP port' field contains '161'. A 'Query...' button is present. A callout box points to the 'Host' field with the text: "Enter IP address of NetAgent or UPSilon. Click on Query to show all available NetAgent".

Connection Query Dialog: This dialog shows the results of a query. It has a title bar 'Connection Query' and a list of available connections under the heading 'Available List':
[N] 192.168.66.102
[N] 192.168.66.102
[S] 192.168.66.101
A mouse cursor is pointing at the first entry. A callout box points to the list with the text: "(N) = NetAgent (S) = UPSilon PC".

Additional Callouts: A large blue arrow points from the 'Configuration' button in the main interface to the 'Add' button in the 'Configure' dialog. Another large blue arrow points from the 'Add' dialog to the 'Connection Query' dialog.

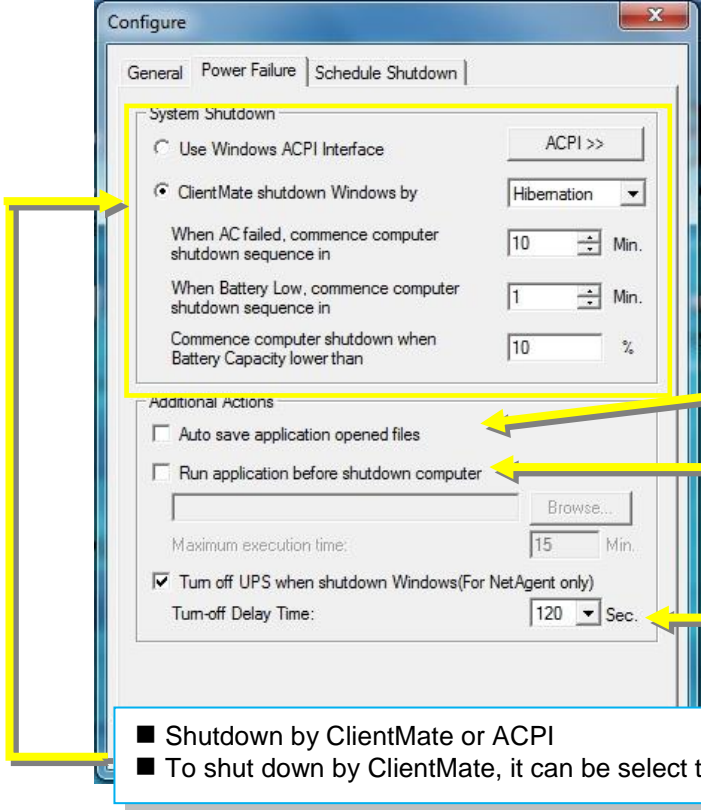

If connect with multi NetAgent, shutdown condition can be perform by security level.
 Low : All NetAgent with AC failure condition
 Medium : 50% NetAgent device has AC failure condition
 High : AC failure from any/single NetAgent would shutdown

If to have pop warning message

If password is required for any configuration change

Power Failure/Shutdown Condition

Shutdown by Scheduling

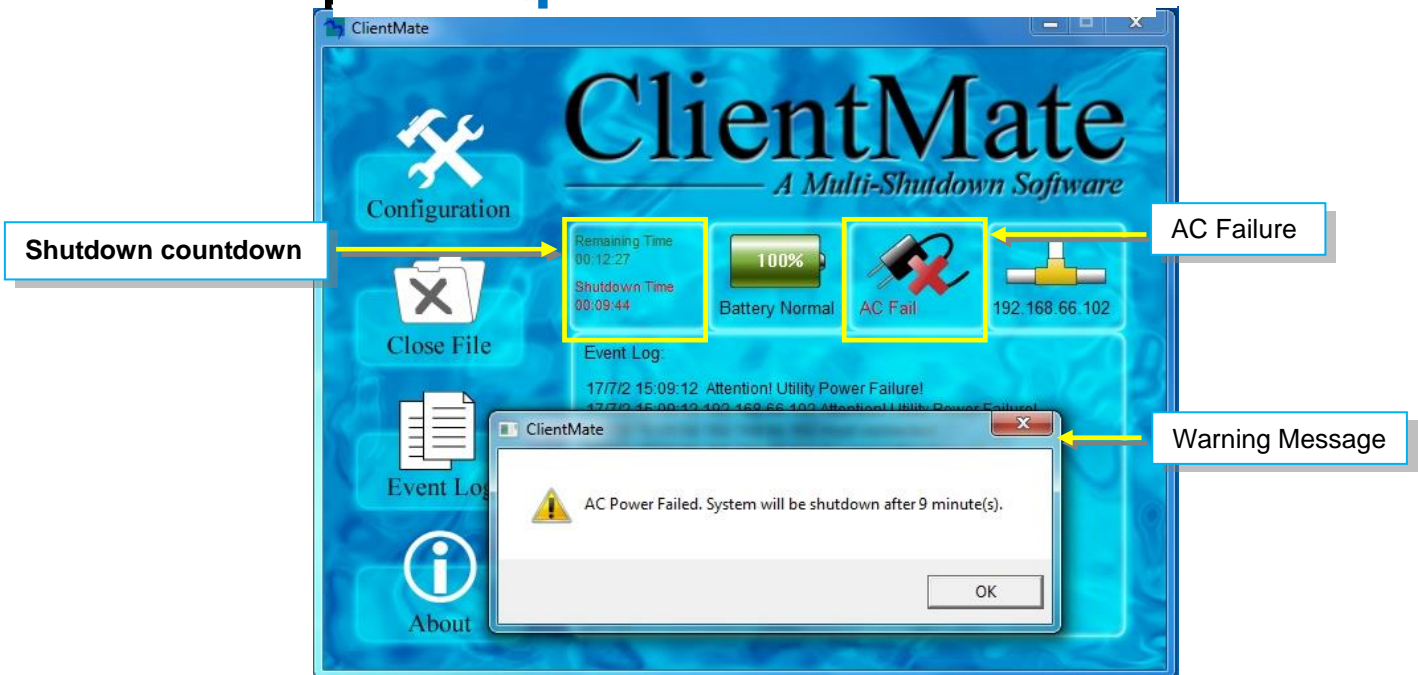

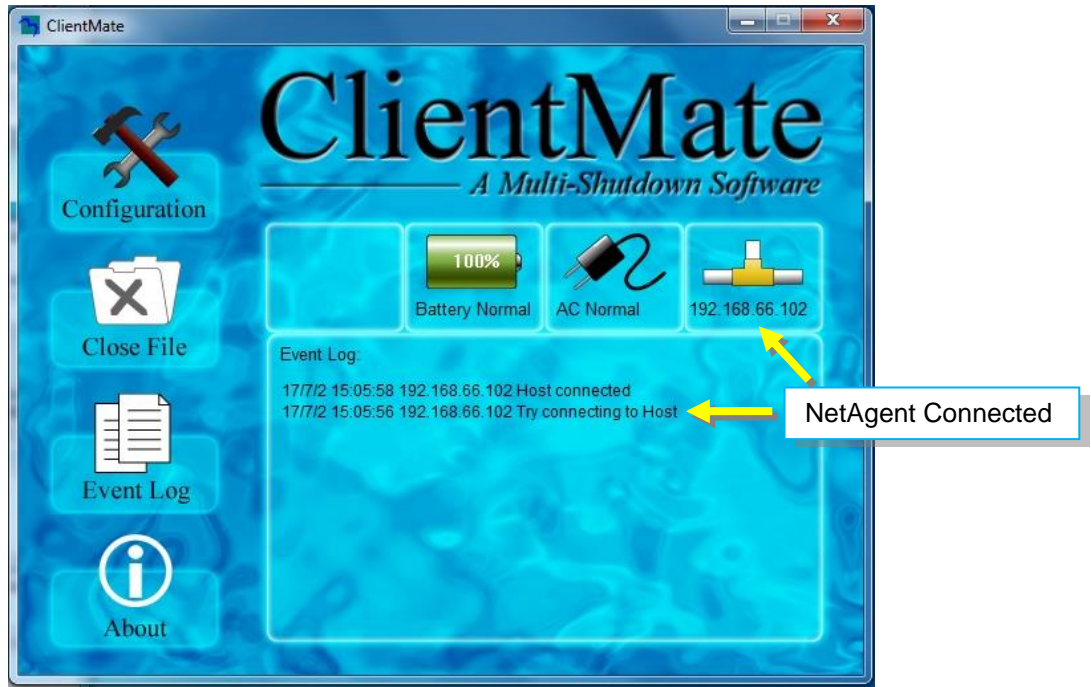

Auto save opened file

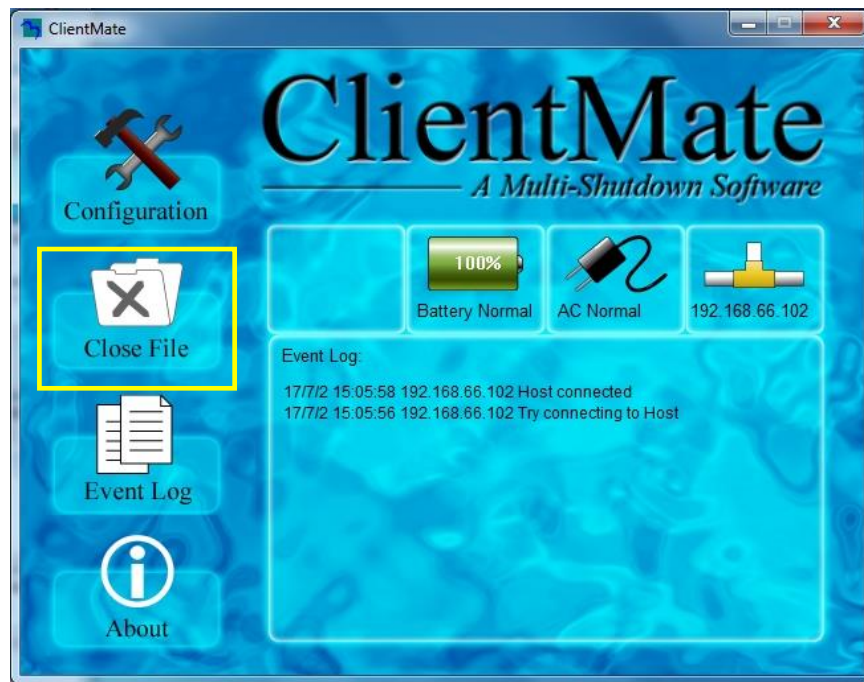

To execute any application file such as .bat before shutdown

To turn off UPS after shutdown

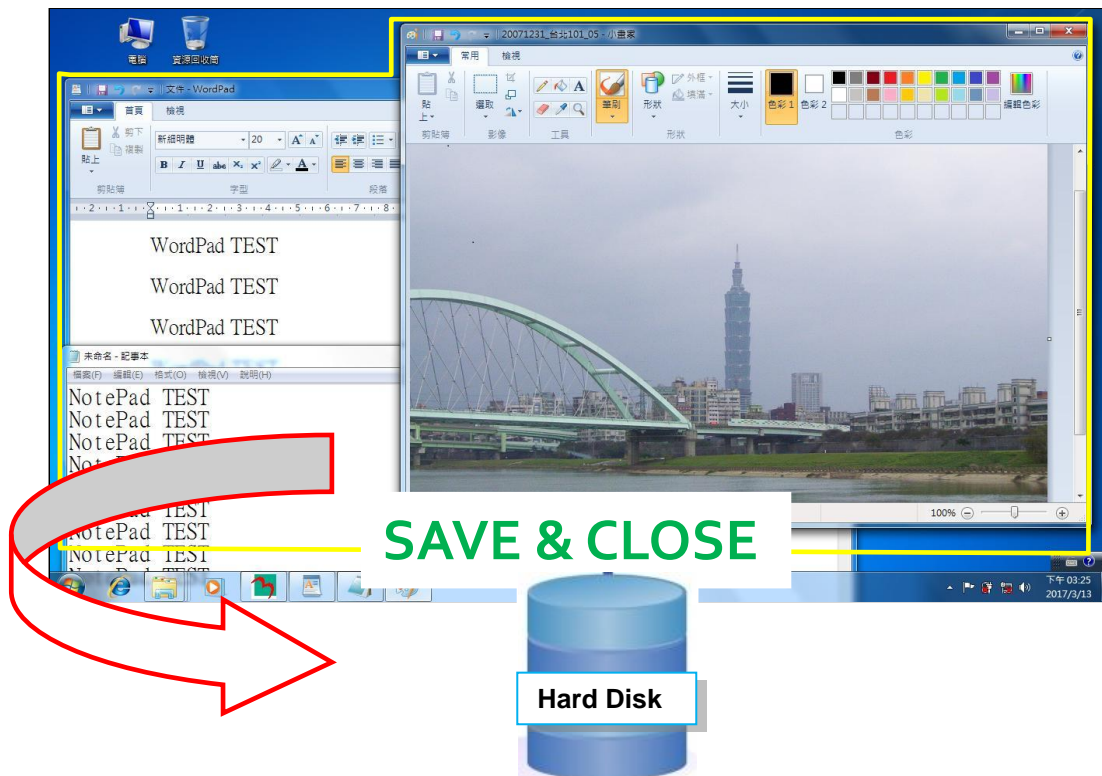

- Shutdown by ClientMate or ACPI
- To shut down by ClientMate, it can be select to be shut down or hibernation

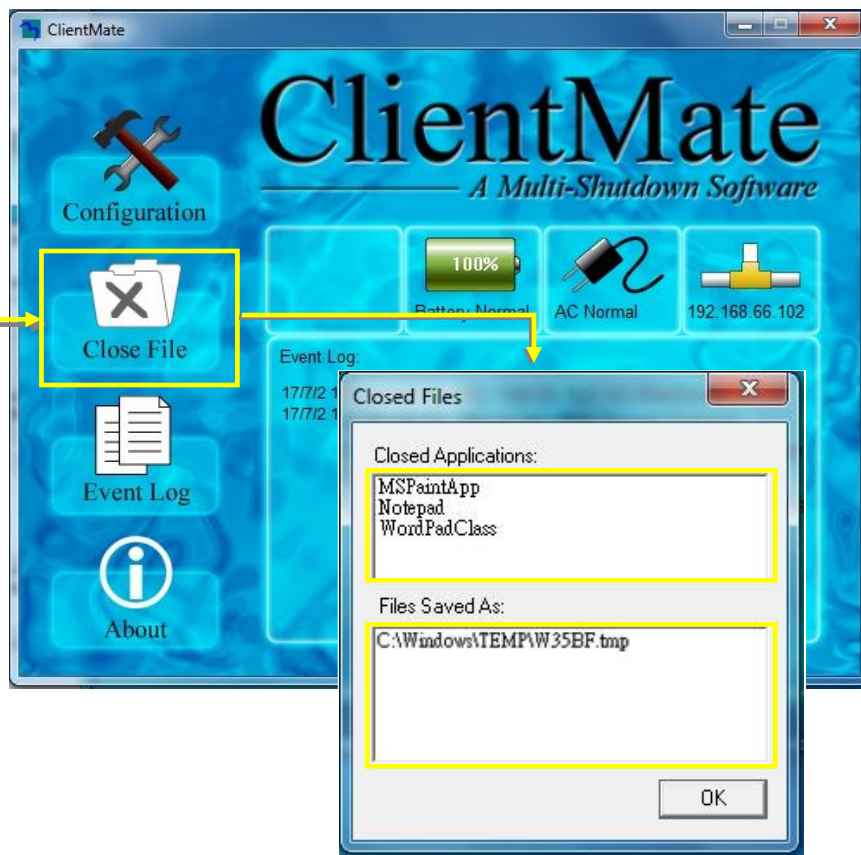

Close File

If select to auto save file before shutdown, ClientMate will save the file and file can be check from Closed File

Closed Application or Files Saved As

Event Log

The screenshot shows the ClientMate software interface. On the left sidebar, the 'Event Log' button is highlighted with a yellow box. A callout box labeled 'Check Event log' has an arrow pointing to this button. Another yellow arrow points from the 'Event Log' button to the 'Event Log' window that is open in the foreground. The main interface displays the 'ClientMate' logo and 'A Multi-Shutdown Software' tagline. Below the logo, there are status indicators for 'Battery Normal' (100%), 'AC Normal', and the IP address '192.168.66.102'. The 'Event Log' section in the main interface shows two entries: '17/7/2 15:05:58 192.168.66.102 Host connected' and '17/7/2 15:05:56 192.168.66.102 Try connecting to Host'. The 'Event Log' window displays a table with the following data:

Date	Time	Host address	Description
2017/07/02	15:17:06		Attention! Utility Power Fe
2017/07/02	15:17:03	192.168.66.102	Attention! Utility Power Fe

About

The screenshot shows the ClientMate software interface. On the left sidebar, the 'About' button is highlighted with a yellow box. A callout box labeled 'Check ClientMate version' has an arrow pointing to this button. Another yellow arrow points from the 'About' button to the '關於' dialog box that is open in the foreground. The main interface displays the 'ClientMate' logo and 'A Multi-Shutdown Software' tagline. Below the logo, there are status indicators for 'Battery Normal' (100%), 'AC Normal', and the IP address '192.168.66.102'. The 'Event Log' section in the main interface shows two entries: '17/7/2 15:05:58 192.168.66.102 Host connected' and '17/7/2 15:05:56 192.168.66.102 Try connecting to Host'. The '關於' dialog box displays the following information:

ClientMate 版本 5.62
Mega System Technologies, Inc.
版權 (C) 2012

Chapter 7. SNMP View

SNMPView is a NMS software to remotely monitor and control multiple UPS with NetAgent.. When an event occurs, SNMPView can be programmed to send an email or trap to inform the designated network manager. It can also inform the user of the UPS current condition or configuration, perform self-test, send a history file, turn the UPS On/Off and more.

Installation and setup

SNMP View software is available in the CD provided with NetAgent. After installed, it saves under directory of

All Programs >NetAgent > SNMPView > SNMP for Windows

Operation Interface

Chapter 8. iMConfig

iMConfig is a tool software that allows user to change the same parameter on multi NetAgent simultaneously.

Installation and setup

iMConfig is available in the CD provided with NetAgent. After installed, it saves under directory of

All Programs > NetAgent> iMConfig

Operation Interface

Setting Section

The screenshot shows the iMConfig application window. The interface includes a menu bar (Device, Tools, View, System, Help), a toolbar with icons for Enumerate Device, Add Device, Delete, Group, Device Setting, Browse Device, View, and System Setting. On the left, a 'Group Station' tree shows a hierarchy: Technology building > 2F Control room > 3F IDC > 6F IDC. The main area is a table with columns: UPS IP, Host Name, Manager, Location, and Setting Progress. A red box highlights the 'NetAgent Information' area, which contains a status indicator (Connection Normal) and a button (Disconnect with NetAgent). A status bar at the bottom shows: 0 UPS, 0 UPS group has been selected | 3 UPS in the list, 1 UPS lost communication. | 10:41:00. Annotations with arrows point to the 'Setting Section' (toolbar), 'Group Station' (tree), 'NetAgent Information' (status box), and 'Connection Information' (status bar).

UPS IP	Host Name	Manager	Location	Setting Progress
192.168.66.102	BT506	Administrator	2F	Ready
192.168.66.103	BY506	Administrator	2F	Ready
192.168.66.101	DY520	Administrator	2F	Ready

Chapter 9. SMS Server Software

SMS notification can be send by modem that connects to 3 ports NetAgent II or NetAgent 9 (BX/BY) model directly, or , it can also be achieved by the remote PC that has SMS Server software installed with modem connected

Modem Installation

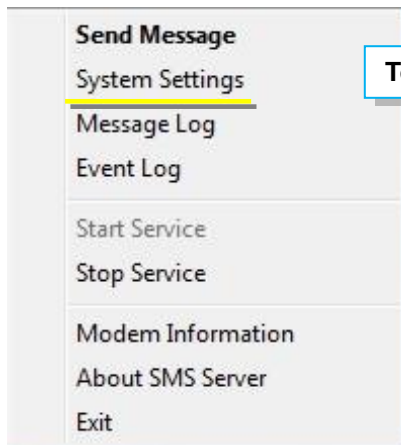

SMS Server Software Installation

SMS Server software is available in the CD provided with NetAgent. After installed, it saves under directory of

All Programs > NetAgent>SMS Server>SMS Server Manager

Settings

To configure type of modem, port, SIM PIN

Check the virtual port number when using with USB modem

Select COM port of COM1,COM2.. when using with RS232 modem

Default is 80

If PIN required, please enter

To check modem information and connection status

-Ensure all settings are correct and modem is connected with signal in order to send SMS successfully

When SMS Server software installation and connection are both complete, the IP address of PC may be entered in the NetAgent's SMS webpage and select "Use Remote Service". Such NetAgent would then be able to send SMS notification via this SMS Server PC

Chapter 10. Appendix

When Netility and NetAgent's username/password are lost, please follow the steps below to clear or check the configuration

1. Get the PC that is under same network as NetAgent-SNMP card
2. Open up the browser and type <http://xxx.xx/password.cgi> (xx.xxx is the IP address of the NetAgent)

3. Enter ID: admin

Password: Enter the master password for the device

4. Press continue and clear
