- Native multipathing is not supported on boot-from-SAN configurations.
- EMC supports the following filesystems: ext2, ext3, reiserfs unless otherwise noted in the ESM. If there is a customer requirement for a different filesystem, please submit an RPO.
- SGI's XFS filesystem is also supported for this configuration. Files that are part of the released distribution of the operating system (e.g. /, /etc, /usr, /opt, etc) must not reside on an XFS filesystem. XFS is supported on non-operating system data only.
- The LVM included as part of this update is supported and can be used in conjunction with PowerPath emcpower pseudo device file names as well as native sd device file names.
- Supported kernels: 2.6.5-7.308, 2.6.5-7.311, 2.6.5-7.312, 2.6.5-7.314, 2.6.5-7.315, 2.6.5-7.316, 2.6.5-7.317, 2.6.5-7.318, 2.6.5-7.319, 2.6.5-7.321, 2.6.5-7.322, 2.6.5-7.323, 2.6.5-7.324.
The 32bit kernel 2.6.5-7.311 is not supported with PowerPath 5.1 SP1.
Confirm kernel support with server vendor.
- BIOS 4.00a1 EFI Boot code. Available in the EMC-approved section of the Emulex website. <http://www.emulex.com> Boot support for 64-Bit servers can be accomplished in two ways depending on your server. If your server does not have support for Legacy Option ROMs that use INT 13 for external boot, then an EFI boot driver must be used instead. Refer to your server documentation as to whether your server supports Legacy Option ROM loading.
