22. Greater than 2--node not supported for FC-AL.
23. For RAC configuration, supports Oracle 10gR2, 11gR1 and 11gR2
24. x6440 processor support: Supported processors: 8376HE, 8380 and 8384. The 8354 processor is not supported.
25. Requires S10x86 Update 7 as a minimum version for iSCSI support.
26. Review VERITAS Storage Foundation 5.0 for Oracle RAC Release Notes for supported Oracle Database releases
27. Veritas Storage Foundation Cluster File System (SFCFS) product supported
28. Coordinator disks are used for I/O fencing only and do not serve any other storage purpose in the cluster configuration. Recommended volume size for coordinator disk is 40 MB or higher
29. Recommend using vxdisk -f init <device> instead of vxdisksetup -i <device> (Reference EMC Knowledgebase ID # emc148807)
30. Supported with Veritas MP1 patch or higher
31. See EMC's Veritas Support Matrix for Veritas Volume Manager & File System support on SUN platform
32. Required Sun patch for Solaris 10:
119130-33 SunOS 5.10: Sun Fiber Channel Device Drivers
33. Required Sun patch for Solaris 10:
119130-33 or higher SunOS 5.10: Sun Fiber Channel Device Drivers
34. Supported with Veritas Maintenance Pack 1 (MP1) Rolling Patch 1 (RP1) or higher
35. Review VERITAS Storage Foundation 5.0 MP3 for Oracle RAC Release Notes for supported Oracle Database releases
36. Requires MP3_RP3
37. For RAC configuration, supports Oracle 11gR2 with the following patch:
* Sparc: 144221-01
* x86: 144222-01
38. Review VERITAS Storage Foundation 5.1 for Oracle RAC Release Notes for supported Oracle Database releases
39. Symmetrix "SC3" FA port flag setting required and SCSI-3 "PER" volume flag setting required for all coordinator and data disks

Sun Solaris x86

EMC has qualified the following cluster software. Please refer to the Base Connectivity table(s) for information concerning server models, HBAs, drivers, firmware, operating system requirements and other special notes. Cluster configurations listed below for Symmetrix require any director settings noted here in addition to those listed for the underlying Operating System as found in the Director Bit/Flag Information table.

Sun Solaris x86						
No.	Operating System	Cluster Software	Max # Nodes	Infrastructure Software	Server LVM	Storage Array
1	Sun Solaris x86 10 ²	Oracle Solaris Cluster 3.2 1/09 (Update 2) ^{4, 5, 6, 7, 8, 9, 10, 14}	HA: 4	EMC PowerPath; 5.2.1, 5.2.2, 5.3 ¹¹	Veritas VxVM 5.0 ¹²	EMC: CLARiiON AX4-5, Celerra NX4 (FC)

- See EMC's Veritas Support Matrix for Veritas Volume Manager & File System support on SUN platform
- EMC supports ZFS in Solaris 10_x86 11/06 (update 3) or later. The Snapshot and Clone features of ZFS are supported only through Sun Microsystems.
- Coordinator disks are used for I/O fencing only and do not serve any other storage purpose in the cluster configuration. Recommended volume size for coordinator disk is 40 MB or higher
- iSCSI support requires minimum versions (or later) of the following patches:(SOL 10) 126106-40; (SOL 10x86) 126107-40.
- For CLARiiON Flare versions R26 thru R28, ALUA Mode is supported with SCSI-3 PGR Only.
- Requires minimum versions (or later) of the following Patches:
(SOL 9) : 126105-03 and 125510-02
(SOL 10) : 126106-03 and 125511-02
(SOL 10x86) : 126107-03 and 125512-02
- ZFS support requires the following patch(es):
S10_Sparc: {125514-04, 137137-09 and 139579-02}
S10_x86: {125515-04, 137138-09 and 139580-02}.
Please review Sun Alert 245626.
- For all Oracle Solaris Cluster 3.x configurations where TimeFinder or SRDF are being used, please refer to the white papers "EMC Symmetrix with Sun Cluster 3.x" and "Integration of EMC SRDF and TimeFinder with Sun Cluster 3" on Avatar and PowerLink.
- x6440 processor support: Supported processors: 8376HE, 8380 and 8384. The 8354 processor is not supported.
- Requires S10x86 Update 7 as a minimum version for iSCSI support.
- Limitations exist when migrating encrypted devices. Please refer to the PowerPath Encryption with RSA release notes for features and exceptions.
- Requires MP3_RP1 or MP3_RP3.
- Powerpath with Encryption is not supported with clusters at this time. Please refer to the Powerpath Release notes for other features and exceptions.
- Sun SPARC Enterprise M8000 and M9000 require an RPQ
- ZFS is not supported.
- Supports RP1
- For RAC configuration, requires Oracle 10gR2.
- For RAC configuration, supports Oracle 10gR2 and Oracle 11gR1
- Please add the following into the /etc/system file: "set pxfs:pxfs_fastwrite_enabled=0"
- Requires MP3_RP3
- For RAC configuration, supports Oracle 10gR2,11gR1 and 11gR2
- Requires S10 Update 7 as a minimum version for iSCSI support.
- For LDOM support, please refer to the 'Virtualization Server Support' table available via EMC PowerLink: https://elabnavigator.emc.com/emcpubs/elab/esm/pdf/Virtualization_Server_Support.pdf
- Review VERITAS Storage Foundation 5.1 for Oracle RAC Release Notes for supported Oracle Database releases
- Veritas Storage Foundation Cluster File System (SFCFS) product supported
- Review VERITAS Storage Foundation 5.0 for Oracle RAC Release Notes for supported Oracle Database releases
- Review VERITAS Storage Foundation 5.0 MP3 for Oracle RAC Release Notes for supported Oracle Database releases

- Supported kernels: 2.6.18-194.1.AXS3, 2.6.18-194.2.AXS3, 2.6.18-194.3.AXS3, 2.6.18-194.4.AXS3, 2.6.18-194.5.AXS3, 2.6.18-194.7.AXS3, 2.6.18-194.8.AXS3. Confirm kernel support with server vendor.
- Includes Redflag DC Server, Miracle Linux and HanCom Asianux Server.
- This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter™ (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- NPV is not supported with SAN-OS versions less than 3.3.1c
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
- ISLs are supported to Cisco FC switches
- Support for direct attach to EMC storage only. SAN attach is not supported. Storage array will see connection as FC-SW.
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by Qlogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- This switch is the same as the IBM SAN256M
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- Minimum firmware v1.0.7.0 required
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to installed in bays 8 & 10.
- Minimum Nexus firmware version 4.1(3)N1(1) required.
- This switch is also known as the Cisco Nexus 5020
- Switch does not support E-port connectivity. Product is intended for single-switch environments only.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"
- This switch is offered by Dell as the Brocade VL2 LC.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
- This HBA is equivalent to the Emulex LPe12000
- This HBA is equivalent to the Emulex LPe12002
- This HBA is equivalent to the Qlogic QLE2560
- This HBA is equivalent to the Qlogic QLE2562
- Direct connection to EMC Storage Arrays are not supported
- Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.
- VMWare ESX does not have dependencies on specific FC-switches and has been found to be broadly interoperable with current generation FC-SW2 compliant Fibre Channel switches. The listed FC-switches reflect the configurations qualified for support with EMC storage arrays.
- Support kernel: 2.6.9-42.7AX. Contact server vendor for support.**
- Asianux 2.0 SP2 include Redflag DC Server 5.0 SP2, Miracle Linux v4.0 SP2, HanCom 2006 Server Asianux Server 2.0 SP2.
- Kernels supported: 2.6.9-34.21AX.
Confirm kernel support with server vendor.
- Asianux 2.0 SP1 include Redflag DC Server 5.0 SP1, Miracle Linux v4.0 SP1, HanCom 2006 Server Asianux Server 2.0 SP1.
- Asianux 2.0 GA include Redflag DC Server 5.0 GA, Miracle Linux v4.0 GA, HanCom 2006 Server Asianux Server 2.0.
- Supported kernels: 2.6.9-11.19AX.
Confirm kernel support with server vendor.
- Copper connection only. Supported with Passive and Active Twinax cables.
- The QME2572 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge M610, M710. To update the adapter, please refer to the EMC section on the Qlogic website.
- Adapters are available with Optical or Copper SFP+ connection types. Connection type on adapter and switch must match.
- ED-64 and ED-1032 not supported for FC5300.
- NPIV must be enabled for this switch
- Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
- The Emulex HBAnyware utility does not support the HP VC assigned WWN's.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- Fibre Channel Ports on the Cisco UCS 6120XP and Cisco UCS 6140XP that will be connected to SAN switches must be configured as NP ports. This will require that the SAN switch support NPIV.
- When used with Emulex OneConnect CNAs, Cisco firmware 4.2(1)N1(1) is required for NPIV mode support.

- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on the switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"
- Support kernel: 2.6.9-78.8AXS2. Contact server vendor for support.
- Asianux 2.0 SP3 include Redflag DC Server 5.0 SP3, Miracle Linux v4.0 SP3, HanCom 2006 Server Asianux 2.0 SP3.
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by QLogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- NPIV must be enabled for this switch
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- This switch is the same as the IBM SAN256M
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.

- Supported kernels: 2.6.18-194.1.AXS3, 2.6.18-194.2.AXS3, 2.6.18-194.3.AXS3, 2.6.18-194.4.AXS3, 2.6.18-194.5.AXS3, 2.6.18-194.7.AXS3, 2.6.18-194.8.AXS3. Confirm kernel support with server vendor.
- Includes Redflag DC Server, Miracle Linux and HanCom Asianux Server.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- This switch is the same as the IBM SAN256M
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter™ (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- Direct connection to EMC Storage Arrays are not supported
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by Qlogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPV is not supported with SAN-OS versions less than 3.3.1c

21. Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
22. The Emulex HBAnyware utility does not support the HP VC assigned WWN's.
23. NPIV must be enabled for this switch
24. HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
25. This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
26. This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
27. ISLs are supported to Cisco FC switches
28. Support for direct attach to EMC storage only. SAN attach is not supported. Storage array will see connection as FC-SW.
29. Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to installed in bays 8 & 10.
30. The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
31. The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
32. Minimum firmware v1.0.7.0 required
33. Support kernel: 2.6.9-78.8AXS2. Contact server vendor for support.
34. Asianux 2.0 SP3 include Redflag DC Server 5.0 SP3, Miracle Linux v4.0 SP3, HanCom 2006 Server Asianux 2.0 SP3.
35. The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
36. The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
37. The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
38. When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
39. The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
40. The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on the switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
41. The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
42. CMDCE stands for "Connectrix Manager Data Center Edition"
43. VMWare ESX does not have dependencies on specific FC-switches and has been found to be broadly interoperable with current generation FC-SW2 compliant Fibre Channel switches. The listed FC-switches reflect the configurations qualified for support with EMC storage arrays.
44. Copper connection only. Supported with Passive and Active Twinax cables.
45. Supported kernels: 2.6.9-42.7AX.
Confirm kernel support with server vendor.
46. Asianux 2.0 SP2 include Redflag DC Server 5.0 SP2, Miracle Linux v4.0 SP2, HanCom 2006 Server Asianux Server 2.0 SP2.
47. Kernels supported: 2.6.9-34.21AX.
Confirm kernel support with server vendor.
48. Asianux 2.0 SP1 include Redflag DC Server 5.0 SP1, Miracle Linux v4.0 SP1, HanCom 2006 Server Asianux Server 2.0 SP1.
49. Asianux 2.0 GA include Redflag DC Server 5.0 GA, Miracle Linux v4.0 GA, HanCom 2006 Server Asianux Server 2.0.
50. Supported kernels: 2.6.9-11.19AX.
Confirm kernel support with server vendor.
51. This HBA is equivalent to the Emulex LPe12000
52. This HBA is equivalent to the Emulex LPe12002
53. This HBA is equivalent to the Qlogic QLE2560
54. This HBA is equivalent to the Qlogic QLE2562
55. The QME2572 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge M610, M710. To update the adapter, please refer to the EMC section on the Qlogic website.
56. Adapters are available with Optical or Copper SFP+ connection types. Connection type on adapter and switch must match.
57. Fibre Channel Ports on the Cisco UCS 6120XP and Cisco UCS 6140XP that will be connected to SAN switches must be configured as NP ports. This will require that the SAN switch support NPIV.
58. When used with Emulex OneConnect CNAs, Cisco firmware 4.2(1)N1(1) is required for NPIV mode support.
59. Minimum Nexus firmware version 4.1(3)N1(1) required.
60. This switch is also known as the Cisco Nexus 5020
61. Switch does not support E-port connectivity. Product is intended for single-switch environments only.
62. When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
63. Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.
64. ED-64 and ED-1032 not supported for FC5300.

- for NS700 G series, requires a minimum of NAS5.2
- Integrated controllers on NS600G series
- EMC integrated HBA applies for NS600 G and NS700 G series
- Addressable from Data Mover. Constrained by the number of targets addressable through a Symmetrix FA port.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- for tape drive connectivity
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.

- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- This switch is the same as the IBM SAN256M
- It is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels: (a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- EMC supports the Brocade Encryption Switch (BES) based encryption for Celerra NAS NDMP backup to physical tape. This solution is not applicable to EMC disk libraries (EDL). While configuring encryption, please use the CLI. If GUI is used, the WWPON of the Celerra will have to be entered manually.
- For any encryption support based information, please refer to the Encryption table.
- Supported for all FC attached storage (Symmetrix, CLARiiON and Celerra)
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by Qlogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels: (a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.

- 23. The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- 24. CMDCE stands for "Connectrix Manager Data Center Edition"

- There is only one Solaris; however, Fujitsu customers must obtain Solaris media, Solaris patches, and Solaris support from their regional Fujitsu support provider. Fujitsu provides Solaris patches in a convenient package called PTF. Fujitsu recommends customers install the latest PTF: version R10111. Fujitsu and EMC recommend as a best practice that customers also upgrade to the most recent Solaris 9 patch cluster, available from Fujitsu's regional support providers.
- The Solaris sd driver is unable to configure a lun addresses greater than 255.
- It is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels: (a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- EMC supports the Brocade Encryption Switch (BES) based encryption for Celerra NAS NDMP backup to physical tape. This solution is not applicable to EMC disk libraries (EDL). While configuring encryption, please use the CLI. If GUI is used, the WWPN of the Celerra will have to be entered manually.
- For any encryption support based information, please refer to the Encryption table.
- Supported for all FC attached storage (Symmetrix, CLARiiON and Celerra)
- There is only one Solaris; however, Fujitsu customers must obtain Solaris media, Solaris patches, and Solaris support from their regional Fujitsu support provider. Fujitsu provides Solaris patches in a convenient package called PTF. Fujitsu recommends customers install the latest PTF: version R10111. Fujitsu and EMC recommend as a best practice that customers also upgrade to the most recent Solaris 10 patch cluster, available from Fujitsu's regional support providers.
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by Qlogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- This switch is the same as the IBM SAN256M
- ED-64 and ED-1032 not supported for FC5300.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.

20. The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
21. There is only one Solaris; however, Fujitsu customers must obtain Solaris media, Solaris patches, and Solaris support from their regional Fujitsu support provider. Fujitsu provides Solaris patches in a convenient package called PTF. Fujitsu recommends customers install the latest PTF: version R10111. Fujitsu and EMC recommend as a best practice that customers also upgrade to the most recent Solaris 8 patch cluster, available from Fujitsu's regional support providers.
22. The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
23. The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
24. The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
25. When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels: (a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
26. The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
27. The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
28. The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
29. CMDCE stands for "Connectrix Manager Data Center Edition"
30. Switch does not support E-port connectivity. Product is intended for single-switch environments only.

- This switch is the same as the IBM SAN256M
- ED-64 and ED-1032 not supported for FC5300.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by Qlogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- Also: LP11000-M2-FSC
- Also: LP10000DC-M2-FSC & LP10000DC-M2-FJ
- It is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels: (a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- EMC supports the Brocade Encryption Switch (BES) based encryption for Celerra NAS NDMP backup to physical tape. This solution is not applicable to EMC disk libraries (EDL). While configuring encryption, please use the CLI. If GUI is used, the WWPN of the Celerra will have to be entered manually.
- For any encryption support based information, please refer to the Encryption table.
- Supported for all FC attached storage (Symmetrix, CLARiiON and Celerra)
- Also: LP10000-M2-FSC & LP10000-M2-FJ
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels: (a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"
- The Solaris sd driver is unable to configure a lun addresses greater than 255.
- Switch does not support E-port connectivity. Product is intended for single-switch environments only.

- The luns per hba entry in the "Switch Connectivity Table" refers to the "maximum luns per hba" on single port hba's; on dual port hbas the "maximum luns per hba" is equivalent to "maximum luns per hba port"
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- It is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- EMC supports the Brocade Encryption Switch (BES) based encryption for Celerra NAS NDMP backup to physical tape. This solution is not applicable to EMC disk libraries (EDL). While configuring encryption, please use the CLI. If GUI is used, the WWPN of the Celerra will have to be entered manually.
- For any encryption support based information, please refer to the Encryption table.
- Supported for all FC attached storage (Symmetrix, CLARiiON and Celerra)
- The AB465A 2port/2Gig fibre channel/GigE combo card only qualified fibre channel port at this time.
- The AB465A are 3.3 volt only cards and are keyed for 3.3 volt I/O slots, which means they only fit in 3.3 volt I/O slots.
- The A9782A/A9784A the adapter operates in PCI 33 Mhz/66 Mhz and PCI-X 66 Mhz/100Mhz/133Mhz bus speeds with a 64-bit bus width
- FC-AL, FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs; with the exception of the dual port A6826A with one port FC-AL and the other port FC-SW.
- The A9782A/A9784A HBA is capable of supporting both 1 and 2 Gb speeds.
- A6826A/A9784A/A9782A hbas: host must be configured as a 64Bit operating system.
- The A9782A/A9784A are 3.3 volt only cards and are keyed for 3.3 volt I/O slots, which means they only fit in 3.3 volt I/O slots.
- The A9782A/A9784A fibre channel/GigE combo card only port qualified is fibre channel at this time.
- Auto-sensing capability on the HBA is permanently enabled. There is no option to disable auto-sensing on the HBA.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- This switch is the same as the IBM SAN256M
- Persistent FCIDs option must be enabled on the Vsan that contains any HP-UX initiators or target ports accessed by HP-UX initiators, and on individual switch port basis ports which have either a HP-UX initiator or a HP-UX target port attached must be configured for static and persistent FCIDs. Cisco switch ports with HP-UX initiators or HP-UX target ports attached must have unique FCID Area_IDs configured, firmware version 2.0.1b and later should automatically configure the HP-UX initiator switch ports for unique FCID Area_IDs, however the HP-UX initiator switch ports must have the FCID Area_IDs manually configured to be unique with firmware version for earlier firmware revisions. Unique FCID Area_IDs must be manually configured with any firmware revision for HP-UX target ports.
- The N_port ID port value of 255 (0xFF) has special meaning for HP-UX and therefore a N_port ID (FC_ID) can not be returned from a switch which contains this value for the N_port ID (FC_ID) port value for a HP-UX initiator or HP-UX target port. Port ID value of 255 (0xFF) can not be configured for HP-UX initiator port and HP-UX target ports when configuring MDS FC_IDs. The port_ID value is the third byte of the FC_ID.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on the switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"
- Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.

1. This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
2. One of the core fabric switches must be configured to be a principle switch, the blade switches should not acquire the role of principle switch.
3. The following setting should be verified: DefaultZoning = False; DefaultVisibility = None
4. This switch is the same as the IBM SAN256M
5. Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
6. Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.

7. The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
8. The blade for distance extension is PB-48K-18i
9. The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
10. The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
11. The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
12. The IBM OEM equivalent of this switch is supported by EMC as long as the installed firmware and all other switch configuration parameters are in accordance with those specified in the ESM for the corresponding Brocade Silkworm model. Current Brocade and IBM model equivalencies are as follows: Silkworm 3800 / IBM 2109 F16; Silkworm 3900 / IBM 2109 F32; Silkworm 12000 / IBM 2109 M12; Silkworm 24000 / IBM 2109 M14.
13. Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to be installed in bays 8 & 10.
14. Requires minimum AIX Technology Level 5200-08 APAR-IY77270 with APAR IY82520, IY83453, IY83649.
15. Requires minimum AIX Technology Level 5300-04 APAR-IY77273 with APAR IY82522, IY83731, IY83730.
16. It is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels: (a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
17. EMC supports the Brocade Encryption Switch (BES) based encryption for Celerra NAS NDMP backup to physical tape. This solution is not applicable to EMC disk libraries (EDL). While configuring encryption, please use the CLI. If GUI is used, the WWPN of the Celerra will have to be entered manually.
18. For any encryption support based information, please refer to the Encryption table.
19. Supported for all FC attached storage (Symmetrix, CLARiiON and Celerra)
20. Required AIX APARS / PTF's include IY99798, U811887 and U811895.
21. This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
22. Direct connection to EMC Storage Arrays are not supported
23. The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
24. The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
25. The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
26. When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels: (a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
27. The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
28. The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
29. The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
30. CMDCE stands for "Connectrix Manager Data Center Edition"

- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels: (a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by QLogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LPe1150-E.
- This switch is the same as the IBM SAN256M
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.

18. The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
19. The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
20. Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
21. Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
22. The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
23. Cisco MDS switch ports which are connected to Emulex LP8000 HBAs must be hard-set to 1Gb speeds.
24. The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the QLogic website.
25. The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the QLogic website.

- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by QLogic.
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- This switch is the same as the IBM SAN256M
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- This switch is offered by Dell as the Brocade VL2 LC.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
-

- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
23. CMDCE stands for "Connectrix Manager Data Center Edition"
 24. When used with Emulex OneConnect CNAs, Cisco firmware 4.2(1)N1(1) is required for NPIV mode support.
 25. Minimum Nexus firmware version 4.1(3)N1(1) required.
 26. This switch is also known as the Cisco Nexus 5020
 27. NPV is not supported with SAN-OS versions less than 3.3.1c
 28. This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
 29. This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
 30. ISLs are supported to Cisco FC switches
 31. Fibre Channel Ports on the Cisco UCS 6120XP and Cisco UCS 6140XP that will be connected to SAN switches must be configured as NP ports. This will require that the SAN switch support NPIV.
 32. Supported only in bays 3 and 4 of IBM BladeCenter chassis'.
 33. Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to installed in bays 8 & 10.
 34. The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
 35. The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
 36. EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LPe1150-E.
 37. The QME2572 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge M610, M710. To update the adapter, please refer to the EMC section on the Qlogic website.
 38. Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
 39. Adapters are available with Optical or Copper SFP+ connection types. Connection type on adapter and switch must match.
 40. Minimum firmware v1.0.7.0 required
 41. Optical connections only. Copper Twinax cables are not supported with this CNA.
 42. When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
 43. Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
 44. Copper connection only. Supported with Passive and Active Twinax cables.
 45. Max 4 CNAs supported in a single server.
 46. One of the core fabric switches must be configured to be a principle switch. the blade switches should not acquire the role of principle switch.
 47. The following setting should be verified: DefaultZoning = False; DefaultVisibility = None
 48. HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
 49. NPIV must be enabled for this switch
 50. Cisco MDS switch ports which are connected to Emulex LP8000 HBAs must be hard-set to 1Gb speeds.
 51. Requires minimum UCS firmware bundle 1.3(1c).
 52. This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
 53. Emulex STORPort driver 2.31 is only supported in conjunction with the LPSE12002.
 54. Boot from SAN is not supported with the LPSE12002.
 55. The LPSE12002 is supported in combination with all Emulex 4gb/8gb HBAs in the same host.
 56. Direct connection to EMC Storage Arrays are not supported
 57. Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.
 58. NPIV must be enabled for this switch.

- This switch is offered by Dell as the Brocade VL2 LC.
- EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LPe1150-E.
- The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis¹ and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- Internal port(s) on QLogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
- This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
- ISLs are supported to Cisco FC switches
- One of the core fabric switches must be configured to be a principle switch, the blade switches should not acquire the role of principle switch.
- The following setting should be verified: DefaultZoning = False; DefaultVisibility = None
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- NPIV must be enabled for this switch
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by QLogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- This switch is the same as the IBM SAN256M
- Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to be installed in bays 8 & 10.
- NPV is not supported with SAN-OS versions less than 3.3.1c
- Supported only in bays 3 and 4 of IBM BladeCenter chassis¹.
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- Cisco MDS switch ports which are connected to Emulex LP8000 HBAs must be hard-set to 1Gb speeds.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"
- Minimum Nexus firmware version 4.1(3)N1(1) required.
- This switch is also known as the Cisco Nexus 5020
- The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the QLogic website.
- The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the QLogic website.
- Requires minimum UCS firmware bundle 1.3(1c).
- Fibre Channel Ports on the Cisco UCS 6120XP and Cisco UCS 6140XP that will be connected to SAN switches must be configured as NP ports. This will require that the SAN switch support NPIV.
- Adapters are available with Optical or Copper SFP+ connection types. Connection type on adapter and switch must match.
- This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- Direct connection to EMC Storage Arrays are not supported
- 46.

The QME2572 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge M610, M710. To update the adapter, please refer to the EMC section on the Qlogic website.

- 47. When used with Emulex OneConnect CNAs, Cisco firmware 4.2(1)N1(1) is required for NPIV mode support.
- 48. Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
- 49. Copper connection only. Supported with Passive and Active Twinax cables.
- 50. Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.
- 51. Minimum firmware v1.0.7.0 required
- 52. Optical connections only. Copper Twinax cables are not supported with this CNA.
- 53. NPIV must be enabled for this switch.
- 54. Max 4 CNAs supported in a single server.
- 55. When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- 56. Emulex STORPort driver 2.31 is only supported in conjunction with the LPSE12002.
- 57. Boot from SAN is not supported with the LPSE12002.
- 58. The LPSE12002 is supported in combination with all Emulex 4gb/8gb HBAs in the same host.

Microsoft Windows 2008 R2 [IA64]

- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
- This switch is the same as the IBM SAN256M
- EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LPe1150-E.
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by Qlogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"

- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- When used with Emulex OneConnect CNAs, Cisco firmware 4.2(1)N1(1) is required for NPIV mode support.
- Minimum Nexus firmware version 4.1(3)N1(1) required.
- This switch is also known as the Cisco Nexus 5020
- This switch is offered by Dell as the Brocade VL2 LC.
- The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
- Requires minimum UCS firmware bundle 1.2(1a).
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by QLogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LPe1150-E.
- This switch is the same as the IBM SAN256M
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
- This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
- ISLs are supported to Cisco FC switches
- One of the core fabric switches must be configured to be a principle switch. the blade switches should not acquire the role of principle switch.
- The following setting should be verified: DefaultZoning = False; DefaultVisibility = None
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- NPIV must be enabled for this switch
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDC stands for "Connectrix Manager Data Center Edition"
- Adapters are available with Optical or Copper SFP+ connection types. Connection type on adapter and switch must match.
- Copper connection only. Supported with Passive and Active Twinax cables.
- The QME2572 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge M610, M710. To update the adapter, please refer to the EMC section on the Qlogic website.
- Minimum firmware v1.0.7.0 required
- Optical connections only. Copper Twinax cables are not supported with this CNA.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to be installed in bays 8 & 10.
- Max 4 CNAs supported in a single server.
- Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
- Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.
- This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- NPV is not supported with SAN-OS versions less than 3.3.1c

- 49. Supported only in bays 3 and 4 of IBM BladeCenter chassis.
- 50. The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- 51. The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- 52. Emulex STORPort driver 2.31 is only supported in conjunction with the LPSE12002.
- 53. Boot from SAN is not supported with the LPSE12002.
- 54. The LPSE12002 is supported in combination with all Emulex 4gb/8gb HBAs in the same host.
- 55. Direct connection to EMC Storage Arrays are not supported
- 56. NPIV must be enabled for this switch.

- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels: (a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by Qlogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- This switch is the same as the IBM SAN256M
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
- The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LPe1150-E.

- When used with Emulex OneConnect CNAs, Cisco firmware 4.2(1)N1(1) is required for NPIV mode support.
- Minimum Nexus firmware version 4.1(3)N1(1) required.
- This switch is also known as the Cisco Nexus 5020
- Requires minimum UCS firmware bundle 1.2(1a).
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"
- This switch is offered by Dell as the Brocade VL2 LC.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by QLogic

18. The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
19. This switch is the same as the IBM SAN256M
20. The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
21. The blade for distance extension is PB-48K-18i
22. The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
23. The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
24. The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
25. Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
26. Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
27. The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
28. Fibre Channel Ports on the Cisco UCS 6120XP and Cisco UCS 6140XP that will be connected to SAN switches must be configured as NP ports. This will require that the SAN switch support NPIV.
29. Requires minimum UCS firmware bundle 1.3(1c).
30. Adapters are available with Optical or Copper SFP+ connection types. Connection type on adapter and switch must match.
31. HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
32. EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LPe1150-E.
33. Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
34. The QME2572 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge M610, M710. To update the adapter, please refer to the EMC section on the Qlogic website.
35. Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.
36. This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
37. This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
38. ISLs are supported to Cisco FC switches
39. This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
40. NPV is not supported with SAN-OS versions less than 3.3.1c
41. Supported only in bays 3 and 4 of IBM BladeCenter chassis'.
42. Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to installed in bays 8 & 10.
43. Copper connection only. Supported with Passive and Active Twinax cables.
44. Minimum firmware v1.0.7.0 required
45. Optical connections only. Copper Twinax cables are not supported with this CNA.
46. When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
47. Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
48. Max 4 CNAs supported in a single server.
49. The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
50. The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
51. Direct connection to EMC Storage Arrays are not supported
52. NPIV must be enabled for this switch.
53. One of the core fabric switches must be configured to be a principle switch, the blade switches should not acquire the role of principle switch.
54. The following setting should be verified: DefaultZoning = False; DefaultVisibility = None
55. NPIV must be enabled for this switch
56. Emulex STORPort driver 2.31 is only supported in conjunction with the LPSE12002.
57. Boot from SAN is not supported with the LPSE12002.
58. The LPSE12002 is supported in combination with all Emulex 4gb/8gb HBAs in the same host.

- This switch is the same as the IBM SAN256M
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
- When used with Emulex OneConnect CNAs, Cisco firmware 4.2(1)N1(1) is required for NPIV mode support.
- Minimum Nexus firmware version 4.1(3)N1(1) required.
- This switch is also known as the Cisco Nexus 5020
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- Requires minimum UCS firmware bundle 1.2(1a).
- This switch is offered by Dell as the Brocade VL2 LC.
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by Qlogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to be installed in bays 8 & 10.
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- NPV is not supported with SAN-OS versions less than 3.3.1c
- Supported only in bays 3 and 4 of IBM BladeCenter chassis'.
- Adapters are available with Optical or Copper SFP+ connection types. Connection type on adapter and switch must match.
- The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LPe1150-E.
- The QME2572 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge M610, M710. To update the adapter, please refer to the EMC section on the Qlogic website.
- This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
- Direct connection to EMC Storage Arrays are not supported
- Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
- NPIV must be enabled for this switch.
- ISLs are supported to Cisco FC switches
- One of the core fabric switches must be configured to be a principle switch. the blade switches should not acquire the role of principle switch.
- The following setting should be verified: DefaultZoning = False; DefaultVisibility = None
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- NPIV must be enabled for this switch
- Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
- Copper connection only. Supported with Passive and Active Twinax cables.
- Minimum firmware v1.0.7.0 required
- Optical connections only. Copper Twinax cables are not supported with this CNA.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- Max 4 CNAs supported in a single server.
- Emulex STORPort driver 2.31 is only supported in conjunction with the LPSE12002.
- Boot from SAN is not supported with the LPSE12002.
- The LPSE12002 is supported in combination with all Emulex 4gb/8gb HBAs in the same host.
- Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.

Confirm kernel support with server vendor.
- Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.
- Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
- Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to installed in bays 8 & 10.
- Switch does not support E-port connectivity. Product is intended for single-switch environments only.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated

- router based configurations.
9. When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
 10. The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
 11. The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
 12. The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
 13. CMDCE stands for "Connectrix Manager Data Center Edition"
 14. This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
 15. Direct connection to EMC Storage Arrays are not supported
 16. This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
 17. NPV is not supported with SAN-OS versions less than 3.3.1c
 18. Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
 19. The Emulex HBAnyware utility does not support the HP VC assigned WWN's.
 20. The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
 21. No special application blades are supported for this switch.
 22. This switch is supported for the maximum port count made available by QLogic
 23. The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
 24. The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
 25. Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
 26. This switch is offered by Dell as the Brocade VL2 LC.
 27. HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
 28. This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
 29. ISLs are supported to Cisco FC switches
 30. Support for direct attach to EMC storage only. SAN attach is not supported. Storage array will see connection as FC-SW.
 31. Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
 32. Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
 33. This switch is the same as the IBM SAN256M
 34. The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
 35. The blade for distance extension is PB-48K-18i
 36. The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
 37. The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
 38. The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
 39. ED-64 and ED-1032 not supported for FC5300.
 40. NPV must be enabled for this switch
 41. When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.

- Supported kernel : 2.6.9-89.0.0.0.1.EL, 2.6.9-89.0.3.0.1.EL, 2.6.9-89.0.7.0.1.EL, 2.6.9-89.0.9.0.1.EL, 2.6.9-89.0.11.0.1.EL, 2.6.9-89.0.15.0.1.EL, 2.6.9-89.0.16.0.1.EL, 2.6.9-89.0.18.0.1.EL, 2.6.9-89.0.19.0.1.EL, 2.6.9-89.0.20.0.1.EL, 2.6.9-89.0.20.0.2.EL, 2.6.9-89.0.23.0.1.EL, 2.6.9-89.0.25.0.1.EL. Confirm kernel support with server vendor.
- Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.
- Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
- Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to installed in bays 8 & 10.
- Switch does not support E-port connectivity. Product is intended for single-switch environments only.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on the switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"
- This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- Direct connection to EMC Storage Arrays are not supported
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- NPV is not supported with SAN-OS versions less than 3.3.1c
- Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
- The Emulex HBAAnyware utility does not support the HP VC assigned WWN's.
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by Qlogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- This switch is offered by Dell as the Brocade VL2 LC.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
- ISLs are supported to Cisco FC switches
- Support for direct attach to EMC storage only. SAN attach is not supported. Storage array will see connection as FC-SW.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- This switch is the same as the IBM SAN256M
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- ED-64 and ED-1032 not supported for FC5300.
- NPIV must be enabled for this switch
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.

- Supported kernels: 2.6.18-92.0.0.0.1.el5, 2.6.18-92.1.1.0.1.el5, 2.6.18-92.1.6.0.2.el5, 2.6.18-92.1.10.0.1.el5, 2.6.18-92.1.13.0.1.el5, 2.6.18-92.1.17.0.1.el5, 2.6.18-92.1.17.0.2.el5; 2.6.18-92.1.22.0.1.el5. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-78.0.0.0.1.EL, 2.6.9-78.0.1.0.1.EL, 2.6.9-78.0.5.0.1.EL, 2.6.9-78.0.8.0.1.EL, 2.6.9-78.0.8.2.1.EL, 2.6.9-78.0.8.2.2.EL, 2.6.9-78.0.13.0.1.EL, 2.6.9-78.0.17.0.1.EL, 2.6.9-78.0.17.0.2, 2.6.9-78.0.22.0.1.EL. Confirm kernel support with server vendor.
- Supported kernel: 2.6.18-128.0.0.0.2.el5, 2.6.18-128.1.1.0.1.el5, 2.6.18-128.1.6.0.1.el5, 2.6.18-128.1.10.0.1.el5, 2.6.18-128.1.14.0.1.el5, 2.6.18-128.1.16.0.1.el5, 2.6.18-128.2.1.0.1.el5, 2.6.18-128.4.1.0.1.el5, 2.6.18-128.7.1.0.1.el5. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-67.0.0.0.1.EL, 2.6.9-67.0.1.0.1.EL, 2.6.9-67.0.4.0.1.EL, 2.6.9-67.0.7.0.1.EL, 2.6.9-67.0.15.0.1.EL, 2.6.9-67.0.20.0.1.EL, 2.6.9-67.0.20.0.2.EL, 2.6.9-67.0.22.0.1.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.18-53.el5, 2.6.18-53.1.4.el5, 2.6.18-53.1.6.0.1.el5, 2.6.18-53.1.13.0.1.el5, 2.6.18-53.1.14.0.1.el5, 2.6.18-53.1.19.0.1.el5. Confirm kernel support with server vendor.
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- This switch is the same as the IBM SAN256M
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- Supported kernel: 2.6.9-89.0.0.0.1.EL, 2.6.9-89.0.3.0.1.EL, 2.6.9-89.0.7.0.1.EL, 2.6.9-89.0.9.0.1.EL, 2.6.9-89.0.11.0.1.EL, 2.6.9-89.0.15.0.1.EL, 2.6.9-89.0.16.0.1.EL, 2.6.9-89.0.18.0.1.EL, 2.6.9-89.0.19.0.1.EL, 2.6.9-89.0.20.0.1.EL, 2.6.9-89.0.20.2.EL, 2.6.9-89.0.23.0.1.EL, 2.6.9-89.0.25.0.1.EL. Confirm kernel support with server vendor.
- Support for direct attach to EMC storage only. SAN attach is not supported. Storage array will see connection as FC-SW.
- Supported kernels: 2.6.18-8.EL5, 2.6.18-8.0.4.1.EL5, 2.6.18-8.1.4.0.1.EL5, 2.6.18-8.1.6.0.1.EL5, 2.6.18-8.1.8.0.1.EL5, 2.6.18-8.1.10.0.1.EL5, 2.6.18-8.1.14.0.2.EL5, 2.6.18-8.1.15.0.1.EL5, 2.6.18-53.1.21.0.1.el5. Confirm kernel support with server vendor.
- NPV is not supported with SAN-OS versions less than 3.3.1c
- This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
- ISLs are supported to Cisco FC switches
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- NPIV must be enabled for this switch
- This switch is offered by Dell as the Brocade VL2 LC.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by Qlogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
- The Emulex HBAnyware utility does not support the HP VC assigned WWN's.
- When used with Emulex OneConnect CNAs, Cisco firmware 4.2(1)N1(1) is required for NPIV mode support.
- Minimum Nexus firmware version 4.1(3)N1(1) required.
- This switch is also known as the Cisco Nexus 5020
- Supported kernels: 2.6.18-194.0.0.0.3.el5, 2.6.18-194.0.0.0.4.el5, 2.6.18-194.3.1.0.1.el5, 2.6.18-194.3.1.0.2.el5, 2.6.18-194.11.4.0.1.el5. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-55.0.0.0.2.EL, 2.6.9-55.0.2.0.1.EL, 2.6.9-55.0.6.0.1.EL, 2.6.9-55.0.9.0.1.EL, and 2.6.9-55.0.12.0.1.EL. Confirm kernel support with server vendor.
- Fibre Channel Ports on the Cisco UCS 6120XP and Cisco UCS 6140XP that will be connected to SAN switches must be configured as NP ports. This will require that the SAN switch support NPIV.
- Copper connection only. Supported with Passive and Active Twinax cables.
- Switch does not support E-port connectivity. Product is intended for single-switch environments only.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on the switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDC stands for "Connectrix Manager Data Center Edition"
- Supported kernels: 2.6.9-42.0.0.0.1.EL, 2.6.9-42.0.10.0.1.EL, 2.6.9-42.0.3.0.2.EL, and 2.6.9-42.0.8.0.1.EL. Confirm kernel support with server vendor.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to be installed in bays 8 & 10.
- This HBA is equivalent to the Emulex LPe12000

52. This HBA is equivalent to the Emulex LPe12002
53. This HBA is equivalent to the Qlogic QLE2560
54. This HBA is equivalent to the Qlogic QLE2562
55. The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
56. The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
57. This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter™ (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
58. Direct connection to EMC Storage Arrays are not supported
59. Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.
60. ED-64 and ED-1032 not supported for FC5300.
61. The QME2572 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge M610, M710. To update the adapter, please refer to the EMC section on the Qlogic website.
62. Adapters are available with Optical or Copper SFP+ connection types. Connection type on adapter and switch must match.
63. Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
64. Minimum firmware v1.0.7.0 required
65. Requires minimum UCS firmware bundle 1.3(1c).
66. Supported kernels: 2.6.18-164.0.0.0.1.el5, 2.6.18-164.2.1.0.1.el5, 2.6.18-164.6.1.0.1.el5, 2.6.18-164.9.1.0.1.el5, 2.6.18-164.10.1.0.1.el5, 2.6.18-164.11.1.0.1.el5, 2.6.18-164.15.1.0.1.el5. Confirm kernel support with server vendor.

- Supported kernels: 2.6.18-164.el5, 2.6.18-164.2.1.el5, 2.6.18-164.6.1.el5, 2.6.18-164.9.1.el5, 2.6.18-164.10.1.el5, 2.6.18-164.11.1.el5, 2.6.18-164.15.1.el5. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-67.EL, 2.6.9-67.0.1.EL, 2.6.9-67.0.4.EL, 2.6.9-67.0.7.EL, 2.6.9-67.0.15.EL, 2.6.9-67.0.20.EL, 2.6.9-67.0.22.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.18-92.el5, 2.6.18-92.1.1.el5, 2.6.18-92.1.6.el5, 2.6.18-92.1.10.el5, 2.6.18-92.1.13.el5, 2.6.18-92.1.17.el5, 2.6.18-92.1.18.el5, 2.6.18-92.1.22.el5, 2.6.18-92.1.24.el5, 2.6.18-92.1.26.el5. Confirm kernel support with server vendor.
- Supported kernels: 2.6.18-53.el5, 2.6.18-53.1.4.el5, 2.6.18-53.1.6.el5, 2.6.18-53.1.13.el5, 2.6.18-53.1.14.el5, 2.6.18-53.1.19.el5, 2.6.18-53.1.21.el5. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-78.EL, 2.6.9-78.0.1.EL, 2.6.9-78.0.5.EL, 2.6.9-78.0.8.EL, 2.6.9-78.0.13.EL, 2.6.9-78.0.17.EL, 2.6.9-78.0.22.EL, 2.6.9-78.0.24. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-89.EL, 2.6.9-89.0.3.EL, 2.6.9-89.0.7.EL, 2.6.9-89.0.9.EL, 2.6.9-89.0.11.EL, 2.6.9-89.0.15.EL, 2.6.9-89.0.16.EL, 2.6.9-89.0.18.EL, 2.6.9-89.0.19.EL, 2.6.9-89.0.20.EL, 2.6.9-89.0.23.EL, 2.6.9-89.0.26.EL, 2.6.9-89.0.29.EL. Confirm kernel support with server vendor.
- Copper connection only. Supported with Passive and Active Twinax cables.
- Supported kernels: 2.6.18-128.el5, 2.6.18-128.1.1.el5, 2.6.18-128.1.6.el5, 2.6.18-128.1.10.el5, 2.6.18-128.1.14.el5, 2.6.18-128.1.16.el5, 2.6.18-128.2.1.el5, 2.6.18-128.4.1.el5, 2.6.18-128.7.1.el5. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-55.EL, 2.6.9-55.0.2.EL, 2.6.9-55.0.6.EL, 2.6.9-55.0.9.EL, 2.6.9-55.0.12.EL, 2.6.9-55.0.14.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.18-8.EL5, 2.6.18-8.1.1.EL5, 2.6.18-8.1.3.EL5, 2.6.18-8.1.4.EL5, 2.6.18-8.1.6.EL5, 2.6.18-8.1.8.EL5, 2.6.18-8.1.10.EL5, 2.6.18-8.1.14.EL5, and 2.6.18-8.1.15.EL5. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-34.EL, 2.6.9-34.0.1.EL, 2.6.9-34.0.2.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-42.EL, 2.6.9-42.0.2.EL, 2.6.9-42.0.3.EL, 2.6.9-42.0.8.EL, 2.6.9-42.0.10.EL. Confirm kernel support with server vendor.
- Minimum Nexus firmware version 4.1(3)N1(1) required.
- This switch is also known as the Cisco Nexus 5020
- The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the QLogic website.
- The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the QLogic website.
- Supported kernels: 2.6.32-71.el6. Confirm kernel support with server vendor.
- Requires minimum UCS firmware bundle 1.3(1c).
- VMWare ESX does not have dependencies on specific FC-switches and has been found to be broadly interoperable with current generation FC-SW2 compliant Fibre Channel switches. The listed FC-switches reflect the configurations qualified for support with EMC storage arrays.
- Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to installed in bays 8 & 10.
- Adapters are available with Optical or Copper SFP+ connection types. Connection type on adapter and switch must match.
- This HBA is equivalent to the Emulex LPe12000
- This HBA is equivalent to the Emulex LPe12002
- This HBA is equivalent to the QLogic QLE2560
- This HBA is equivalent to the QLogic QLE2562
- The QME2572 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge M610, M710. To update the adapter, please refer to the EMC section on the QLogic website.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDC stands for "Connectrix Manager Data Center Edition"
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by QLogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- This switch is the same as the IBM SAN256M
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
- When used with Emulex OneConnect CNAs, Cisco firmware 4.2(1)N1(1) is required for NPV mode support.
- Supported kernels: 2.6.9-5.EL, 2.6.9-5.0.5.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-22.EL, 2.6.9-22.0.1.EL, 2.6.9-22.0.2.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-11.EL. Confirm kernel support with server vendor.
- Switch does not support E-port connectivity. Product is intended for single-switch environments only.
- This switch is offered by Dell as the Brocade VL2 LC.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
- This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- Direct connection to EMC Storage Arrays are not supported
- NPV is not supported with SAN-OS versions less than 3.3.1c
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
- ISLs are supported to Cisco FC switches

62. Support for direct attach to EMC storage only. SAN attach is not supported. Storage array will see connection as FC-SW.
63. QLogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.
64. ED-64 and ED-1032 not supported for FC5300.
65. Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
66. The Emulex HBAnyware utility does not support the HP VC assigned WWN's.
67. NPIV must be enabled for this switch
68. HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
69. Minimum firmware v1.0.7.0 required
70. FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
71. Single HBA zoning is required regardless of the switch being utilized.
72. Emulex driver and BIOS available from <http://www.emulex.com>
73. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
74. Requires BIOS 1.47 available in the EMC-approved section of the QLogic website at <http://www.qlogic.com>
75. The LP9002-E now ships with the LP9002L-E low profile adapter.
76. Fibre Channel Ports on the Cisco UCS 6120XP and Cisco UCS 6140XP that will be connected to SAN switches must be configured as NP ports. This will require that the SAN switch support NPIV.
77. When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
78. Supported kernels: 2.6.18-194.el5, 2.6.18-194.3.1.el5, 2.6.18-194.8.1.el5, 2.6.18-194.11.1.el5, 2.6.18-194.11.3.el5, 2.6.18-194.11.4.el5, 2.6.18-194.17.1.el5, 2.6.18-194.17.4.el5
- Confirm kernel support with server vendor.
79. Supported only in bays 3 and 4 of IBM BladeCenter chassis'.
80. One of the core fabric switches must be configured to be a principle switch, the blade switches should not acquire the role of principle switch.
81. The following setting should be verified: DefaultZoning = False; DefaultVisibility = None

- Supported kernels: 2.6.18-8.EL5, 2.6.18-8.1.1.EL5, 2.6.18-8.1.3.EL5, 2.6.18-8.1.4.EL5, 2.6.18-8.1.6.EL5, 2.6.18-8.1.8.EL5, 2.6.18-8.1.10.EL5, 2.6.18-8.1.14.EL5, and 2.6.18-8.1.15.el5. Confirm kernel support with server vendor.
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by Qlogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.7.0.
- This switch is the same as the IBM SAN256M
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- Supported kernels: 2.6.9-11.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-22.EL, 2.6.9-22.0.1.EL, 2.6.9-22.0.2.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-78.EL, 2.6.9-78.0.1.EL, 2.6.9-78.0.5.EL, 2.6.9-78.0.8.EL, 2.6.9-78.0.13.EL, 2.6.9-78.0.17.EL, 2.6.9-78.0.22.EL, 2.6.9-78.0.24. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-42.EL, 2.6.9-42.0.2.EL, 2.6.9-42.0.3.EL, 2.6.9-42.0.8.EL, 2.6.9-42.0.10.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-34.EL, 2.6.9-34.0.1.EL, 2.6.9-34.0.2.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.18-164.el5, 2.6.18-164.2.1.el5, 2.6.18-164.6.1.el5, 2.6.18-164.9.1.el5, 2.6.18-164.10.1.el5, 2.6.18-164.11.1.el5, 2.6.18-164.15.1.el5. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-89.EL, 2.6.9-89.0.3.EL, 2.6.9-89.0.7.EL, 2.6.9-89.0.9.EL, 2.6.9-89.0.11.EL, 2.6.9-89.0.15.EL, 2.6.9-89.0.16.EL, 2.6.9-89.0.18.EL, 2.6.9-89.0.19.EL, 2.6.9-89.0.20.EL, 2.6.9-89.0.23.EL, 2.6.9-89.0.26.EL, 2.6.9-89.0.29.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.18-128.el5, 2.6.18-128.1.1.el5, 2.6.18-128.1.6.el5, 2.6.18-128.1.10.el5, 2.6.18-128.1.14.el5, 2.6.18-128.1.16.el5, 2.6.18-128.2.1.el5, 2.6.18-128.4.1.el5, 2.6.18-128.7.1.el5. Confirm kernel support with server vendor.
- Supported kernels: 2.6.18-92.el5, 2.6.18-92.1.1.el5, 2.6.18-92.1.6.el5, 2.6.18-92.1.10.el5, 2.6.18-92.1.13.el5, 2.6.18-92.1.17.el5, 2.6.18-92.1.18.el5, 2.6.18-92.1.22.el5, 2.6.18-92.1.24.el5, 2.6.18-92.1.26.el5. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-55.EL, 2.6.9-55.0.2.EL, 2.6.9-55.0.6.EL, 2.6.9-55.0.9.EL, 2.6.9-55.0.12.EL, 2.6.9-55.0.14.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-67.EL, 2.6.9-67.0.1.EL, 2.6.9-67.0.4.EL, 2.6.9-67.0.7.EL, 2.6.9-67.0.15.EL, 2.6.9-67.0.20.EL, 2.6.9-67.0.22.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.18-53.el5, 2.6.18-53.1.4.el5, 2.6.18-53.1.6.el5, 2.6.18-53.1.13.el5, 2.6.18-53.1.14.el5, 2.6.18-53.1.19.el5, 2.6.18-53.1.21.el5. Confirm kernel support with server vendor.
- Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
- Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to be installed in bays 8 & 10.
- Switch does not support E-port connectivity. Product is intended for single-switch environments only.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"
- This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- Direct connection to EMC Storage Arrays are not supported
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- NPV is not supported with SAN-OS versions less than 3.3.1c
- Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
- The Emulex HBAnyware utility does not support the HP VC assigned WWN's.
- The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- This switch is offered by Dell as the Brocade VL2 LC.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
- ISLs are supported to Cisco FC switches
- Support for direct attach to EMC storage only. SAN attach is not supported. Storage array will see connection as FC-SW.
- NPIV must be enabled for this switch
- Supported kernels: 2.6.9-5.EL, 2.6.9-5.0.5.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.18-194.el5, 2.6.18-194.3.1.el5, 2.6.18-194.8.1.el5, 2.6.18-194.11.1.el5, 2.6.18-194.11.3.el5, 2.6.18-194.11.4.el5, 2.6.18-194.17.1.el5, 2.6.18-194.17.4.el5. Confirm kernel support with server vendor.

- Supported kernels: 2.6.18-8.EL5, 2.6.18-8.1.1.EL5, 2.6.18-8.1.3.EL5, 2.6.18-8.1.4.EL5, 2.6.18-8.1.6.EL5, 2.6.18-8.1.8.EL5, 2.6.18-8.1.10.EL5, 2.6.18-8.1.14.EL5, and 2.6.18-8.1.15.el5. Confirm kernel support with server vendor.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- Supported kernels: 2.6.9-55.EL, 2.6.9-55.0.2.EL., 2.6.9-55.0.6.EL, 2.6.9-55.0.9.EL, 2.6.9-55.0.12.EL, 2.6.9-55.0.14.EL. Confirm kernel support with server vendor.
- NPV is not supported with SAN-OS versions less than 3.3.1c
-

- Supported kernels: 2.6.9-78.EL, 2.6.9-78.0.1.EL, 2.6.9-78.0.5.EL, 2.6.9-78.0.8.EL, 2.6.9-78.0.13.EL, 2.6.9-78.0.17.EL, 2.6.9-78.0.22.EL, 2.6.9-78.0.24. Confirm kernel support with server vendor.
7. The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
 8. The blade for distance extension is PB-48K-18i
 9. The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
 10. The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
 11. The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
 12. This switch is the same as the IBM SAN256M
 13. Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to installed in bays 8 & 10.
 14. This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
 15. This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
 16. ISLs are supported to Cisco FC switches
 17. Support for direct attach to EMC storage only. SAN attach is not supported. Storage array will see connection as FC-SW.
 18. Supported kernels: 2.6.9-89.EL, 2.6.9-89.0.3.EL, 2.6.9-89.0.7.EL, 2.6.9-89.0.9EL, 2.6.9-89.0.11.EL, 2.6.9-89.0.15.EL, 2.6.9-89.0.16.EL, 2.6.9-89.0.18.EL, 2.6.9-89.0.19.EL, 2.6.9-89.0.20.EL, 2.6.9-89.0.23.EL, 2.6.9-89.0.26.EL, 2.6.9-89.0.29.EL. Confirm kernel support with server vendor.
 19. The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
 20. The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
 21. The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
 22. When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
 23. The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
 24. The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on the switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
 25. The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
 26. CMDCE stands for "Connectrix Manager Data Center Edition"
 27. This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
 28. Direct connection to EMC Storage Arrays are not supported
 29. Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
 30. The Emulex HBAnyware utility does not support the HP VC assigned WWN's.
 31. The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
 32. No special application blades are supported for this switch.
 33. This switch is supported for the maximum port count made available by Qlogic
 34. The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
 35. The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
 36. Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
 37. This switch is offered by Dell as the Brocade VL2 LC.
 38. HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
 39. The IBM OEM equivalent of this switch is supported by EMC as long as the installed firmware and all other switch configuration parameters are in accordance with those specified in the ESM for the corresponding Brocade Silkworm model. Current Brocade and IBM model equivalencies are as follows: Silkworm 3800 / IBM 2109 F16; Silkworm 3900 / IBM 2109 F32; Silkworm 12000 / IBM 2109 M12; Silkworm 24000 / IBM 2109 M14.
 40. Supported kernels: 2.6.18-164.el5, 2.6.18-164.2.1.el5, 2.6.18-164.9.1.el5, 2.6.18-164.10.1.el5, 2.6.18-164.11.1.el5, 2.6.18-164.15.1.el5. Confirm kernel support with server vendor.
 41. Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
 42. Supported only in bays 3 and 4 of IBM BladeCenter chassis.
 43. One of the core fabric switches must be configured to be a principle switch. the blade switches should not acquire the role of principle switch.
 44. NPIV must be enabled for this switch.
 45. The following setting should be verified: DefaultZoning = False; DefaultVisibility = None
 46. NPIV must be enabled for this switch
 47. Supported kernels: 2.6.18-53.el5, 2.6.18-53.1.4.el5, 2.6.18-53.1.6.el5, 2.6.18-53.1.13.el5, 2.6.18-53.1.14.el5, 2.6.18-53.1.19.el5, 2.6.18-53.1.21.el5. Confirm kernel support with server vendor.
 48. Supported kernels: 2.6.9-67.EL, 2.6.9-67.0.1.EL, 2.6.9-67.0.4.EL, 2.6.9-67.0.7.EL, 2.6.9-67.0.15.EL, 2.6.9-67.0.20.EL, 2.6.9-67.0.22.EL. Confirm kernel support with server vendor.
 49. Supported kernels: 2.6.18-128.el5, 2.6.18-128.1.1.el5, 2.6.18-128.1.6.el5, 2.6.18-128.1.10.el5, 2.6.18-128.1.14.el5, 2.6.18-128.1.16.el5, 2.6.18-128.2.1.el5, 2.6.18-128.4.1.el5, 2.6.18-128.7.1.el5. Confirm kernel support with server vendor.
 50. Supported kernels: 2.6.32-71.el6. Confirm kernel support with server vendor.
 51. Supported kernels: 2.6.18-92.el5, 2.6.18-92.1.1.el5, 2.6.18-92.1.6.el5, 2.6.18-92.1.10.el5, 2.6.18-92.1.13.el5, 2.6.18-92.1.17.el5, 2.6.18-92.1.18.el5,2.6.18-92.1.22.el5, 2.6.18-92.1.24.el5, 2.6.18-92.1.26.el5. Confirm kernel support with server vendor.
 52. Supported kernels: 2.6.18-194.el5, 2.6.18-194.3.1.el5, 2.6.18-194.8.1.el5, 2.6.18-194.11.1.el5, 2.6.18-194.11.3.el5, 2.6.18-194.11.4.el5, 2.6.18-194.17.1.el5, 2.6.18-194.17.4.el5 . Confirm kernel support with server vendor.

- Supported kernels: 2.6.18-8.EL5, 2.6.18-8.1.1.EL5, 2.6.18-8.1.3.EL5, 2.6.18-8.1.4.EL5, 2.6.18-8.1.6.EL5, 2.6.18-8.1.8.EL5, 2.6.18-8.1.10.EL5, 2.6.18-8.1.14.EL5, and 2.6.18-8.1.15.el5. Confirm kernel support with server vendor.
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by Qlogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- This switch is offered by Dell as the Brocade VL2 LC.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- This switch is the same as the IBM SAN256M
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- Supported kernels: 2.6.18-194.el5, 2.6.18-194.3.1.el5, 2.6.18-194.8.1.el5, 2.6.18-194.11.1.el5, 2.6.18-194.11.3.el5, 2.6.18-194.11.4.el5, 2.6.18-194.17.1.el5, 2.6.18-194.17.4.el5. Confirm kernel support with server vendor.
- VMWare ESX does not have dependencies on specific FC-switches and has been found to be broadly interoperable with current generation FC-SW2 compliant Fibre Channel switches. The listed FC-switches reflect the configurations qualified for support with EMC storage arrays.
- Supported kernels: 2.6.18-164.el5, 2.6.18-164.2.1.el5, 2.6.18-164.6.1.el5, 2.6.18-164.9.1.el5, 2.6.18-164.10.1.el5, 2.6.18-164.11.1.el5, 2.6.18-164.15.1.el5. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-42.EL, 2.6.9-42.0.2.EL, 2.6.9-42.0.3.EL, 2.6.9-42.0.8.EL, 2.6.9-42.0.10.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-34.EL, 2.6.9-34.0.1.EL, 2.6.9-34.0.2.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-22.EL, 2.6.9-22.0.1.EL, 2.6.9-22.0.2.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-11.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-5.EL, 2.6.9-5.0.5.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-67.EL, 2.6.9-67.0.1.EL, 2.6.9-67.0.4.EL, 2.6.9-67.0.7.EL, 2.6.9-67.0.15.EL, 2.6.9-67.0.20.EL, 2.6.9-67.0.22.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.18-92.el5, 2.6.18-92.1.1.el5, 2.6.18-92.1.6.el5, 2.6.18-92.1.10.el5, 2.6.18-92.1.13.el5, 2.6.18-92.1.17.el5, 2.6.18-92.1.18.el5, 2.6.18-92.1.22.el5, 2.6.18-92.1.24.el5, 2.6.18-92.1.26.el5. Confirm kernel support with server vendor.
- Supported kernels: 2.6.18-53.el5, 2.6.18-53.1.4.el5, 2.6.18-53.1.6.el5, 2.6.18-53.1.13.el5, 2.6.18-53.1.14.el5, 2.6.18-53.1.19.el5, 2.6.18-53.1.21.el5. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-78.EL, 2.6.9-78.0.1.EL, 2.6.9-78.0.5.EL, 2.6.9-78.0.8.EL, 2.6.9-78.0.13.EL, 2.6.9-78.0.17.EL, 2.6.9-78.0.22.EL, 2.6.9-78.0.24. Confirm kernel support with server vendor.
- Copper connection only. Supported with Passive and Active Twinax cables.
- Supported kernels: 2.6.9-89.EL, 2.6.9-89.0.3.EL, 2.6.9-89.0.7.EL, 2.6.9-89.0.9.EL, 2.6.9-89.0.11.EL, 2.6.9-89.0.15.EL, 2.6.9-89.0.16.EL, 2.6.9-89.0.18.EL, 2.6.9-89.0.19.EL, 2.6.9-89.0.20.EL, 2.6.9-89.0.23.EL, 2.6.9-89.0.26.EL, 2.6.9-89.0.29.EL. Confirm kernel support with server vendor.
- Supported kernels: 2.6.18-128.el5, 2.6.18-128.1.1.el5, 2.6.18-128.1.6.el5, 2.6.18-128.1.10.el5, 2.6.18-128.1.14.el5, 2.6.18-128.1.16.el5, 2.6.18-128.2.1.el5, 2.6.18-128.4.1.el5, 2.6.18-128.7.1.el5. Confirm kernel support with server vendor.
- Supported kernels: 2.6.9-55.EL, 2.6.9-55.0.2.EL, 2.6.9-55.0.6.EL, 2.6.9-55.0.9.EL, 2.6.9-55.0.12.EL, 2.6.9-55.0.14.EL. Confirm kernel support with server vendor.
- Minimum Nexus firmware version 4.1(3)N1(1) required.
- This switch is also known as the Cisco Nexus 5020
- NPV is not supported with SAN-OS versions less than 3.3.1c
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
- ISLs are supported to Cisco FC switches
- Switch does not support E-port connectivity. Product is intended for single-switch environments only.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetric, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"
- Supported kernels: 2.6.32-71.el6. Confirm kernel support with server vendor.
- The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to be installed in bays 8 & 10.

- 52. Requires minimum UCS firmware bundle 1.3(1c).
- 53. This HBA is equivalent to the Emulex LPe12000
- 54. This HBA is equivalent to the Emulex LPe12002
- 55. This HBA is equivalent to the Qlogic QLE2560
- 56. This HBA is equivalent to the Qlogic QLE2562
- 57. The QME2572 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge M610, M710. To update the adapter, please refer to the EMC section on the Qlogic website.
- 58. Adapters are available with Optical or Copper SFP+ connection types. Connection type on adapter and switch must match.
- 59. When used with Emulex OneConnect CNAs, Cisco firmware 4.2(1)N1(1) is required for NPIV mode support.
- 60. Fibre Channel Ports on the Cisco UCS 6120XP and Cisco UCS 6140XP that will be connected to SAN switches must be configured as NP ports. This will require that the SAN switch support NPIV.
- 61. This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- 62. Direct connection to EMC Storage Arrays are not supported
- 63. Support for direct attach to EMC storage only. SAN attach is not supported. Storage array will see connection as FC-SW.
- 64. Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.
- 65. ED-64 and ED-1032 not supported for FC5300.
- 66. Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
- 67. The Emulex HBAnyware utility does not support the HP VC assigned WWN's.
- 68. HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- 69. When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- 70. Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
- 71. NPIV must be enabled for this switch
- 72. One of the core fabric switches must be configured to be a principle switch. the blade switches should not acquire the role of principle switch.
- 73. The following setting should be verified: DefaultZoning = False; DefaultVisibility = None
- 74. Minimum firmware v1.0.7.0 required
- 75. Supported only in bays 3 and 4 of IBM BladeCenter chassis'.

- Novell OES 2 is supported with Linux native MPIO or via RPQ for EMC PowerPath.
- Novell OES is only supported with Fibre channel connectivity.
- Supported kernels: 2.6.16.46-0.12, 2.6.16.46-0.14, 2.6.16.53-0.8, 2.6.16.53-0.16, 2.6.16.54-0.2.3, 2.6.16.54-0.2.5, 2.6.16.54-0.2.8. Confirm kernel support with server vendor.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- This switch is the same as the IBM SAN256M
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.

8. The blade for distance extension is PB-48K-18i
9. The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
10. The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
11. The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
12. This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
13. ISLs are supported to Cisco FC switches
14. Supported kernels: 2.6.5-7.244, 2.6.5-7.252, 2.6.5-7.257, 2.6.5-7.267, 2.6.5-7.276, 2.6.5-7.282, 2.6.5-7.283, 2.6.5-7.286, 2.6.5-7.287.3.
Confirm kernel support with server vendor.
15. **Novell OES is supported on kernels 2.6.5-7.244, 2.6.5-7.252, 2.6.5-7.257, 2.6.5-7.267, 2.6.5-7.276, 2.6.5-7.282, 2.6.5-7.283, 2.6.5-7.286, 2.6.5-7.287.3, and 2.6.5-7.308 with EMC PowerPath only.**
16. Supported kernels: 2.6.27.19-5.1, 2.6.27.21-0.1.2, 2.6.27.23-0.1, 2.6.27.25-0.1.1, 2.6.27.29-0.1.1, 2.6.27.37-0.1.1, 2.6.27.39-0.3.1, 2.6.27.42-0.1.1, 2.6.27.45-0.1.1, 2.6.27.48-0.1.1, 2.6.27.48-0.6.1, 2.6.27.48-0.12.1, 2.6.27.54-0.2.1. Confirm kernel support with server vendor.
17. Supported kernels: 2.6.16.60-0.21, 2.6.16.60-0.23, 2.6.16.60-0.27, 2.6.16.60-0.30, 2.6.16.60-0.31, 2.6.16.60-0.33, 2.6.16.60-0.34, 2.6.16.60-0.35, 2.6.16.60-0.37, 2.6.16.60-0.39.3, 2.6.16.60-0.42.4, 2.6.16.60-0.42.5, 2.6.16.60-0.42.7, 2.6.16.60-0.42.8, 2.6.16.60-0.42.9, 2.6.16.60-0.42.10. Confirm kernel support with server vendor.
18. Novell OES 2 SP1 is supported with this update.
19. Supported kernels: 2.6.5-7.308, 2.6.5-7.311, 2.6.5-7.312, 2.6.5-7.314, 2.6.5-7.315, 2.6.5-7.316, 2.6.5-7.317, 2.6.5-7.318, 2.6.5-7.319, 2.6.5-7.321, 2.6.5-7.322, 2.6.5-7.323, 2.6.5-7.324.
The 32bit kernel 2.6.5-7.311 is not supported with PowerPath 5.1 SP1.
Confirm kernel support with server vendor.
20. Supported kernels: 2.6.16.21-0.8, 2.6.16.21-0.15, 2.6.16.21-0.25, 2.6.16.27-0.6, 2.6.16.27-0.9.
Confirm kernel support with server vendor.
PowerPath 5.0 support begins with kernel 2.6.16.27-0.6.
21. Minimum Nexus firmware version 4.1(3)N1(1) required.
22. This switch is also known as the Cisco Nexus 5020
23. Supported kernels: 2.6.16.60-0.54.5, 2.6.16.60-0.57.1, 2.6.16.60-0.58.1, 2.6.16.60-0.59.1, 2.6.16.60-0.60.1, 2.6.16.60-0.62.1, 2.6.16.60-0.66.1, 2.6.16.60-0.67.1, 2.6.16.60-0.68.1, 2.6.16.60-0.69.1. Confirm kernel support with server vendor.
24. Novell OES 2 SP2 is supported with this update.
25. NPV is not supported with SAN-OS versions less than 3.3.1c
26. This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
27. The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
28. No special application blades are supported for this switch.
29. This switch is supported for the maximum port count made available by Qlogic
30. The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
31. **Novell OES is supported with EMC PowerPath only.**
32. Supported kernels: 2.6.5-7.201, 2.6.5-7.202.7.
Confirm kernel support with server vendor.
33. The QME2572 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge M610, M710. To update the adapter, please refer to the EMC section on the Qlogic website.
34. Adapters are available with Optical or Copper SFP+ connection types. Connection type on adapter and switch must match.
35. When used with Emulex OneConnect CNAs, Cisco firmware 4.2(1)N1(1) is required for NPIV mode support.
36. One of the core fabric switches must be configured to be a principle switch. the blade switches should not acquire the role of principle switch.
37. The following setting should be verified: DefaultZoning = False; DefaultVisibility = None
38. The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
39. The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
40. The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
41. When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
42. The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celera). For any encryption support based information, please refer to the encryption table.
43. The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on the switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
44. The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
45. CMDCE stands for "Connectrix Manager Data Center Edition"
46. The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
47. The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
48. Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to be installed in bays 8 & 10.
49. Supported kernels: 2.6.5-7.139, 2.6.5-7.145, 2.6.5-7.147, 2.6.5-7.151.
Confirm kernel support with server vendor.
50. **Supported kernels: 2.6.5-7.108, 2.6.5-7.111.**
Confirm kernel support with server vendor.
51. Support for direct attach to EMC storage only. SAN attach is not supported. Storage array will see connection as FC-SW.
52. Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
53. The Emulex HBAnyware utility does not support the HP VC assigned WWN's.
54. Minimum firmware v1.0.7.0 required
55. FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
56. Single HBA zoning is required regardless of the switch being utilized.
57. Emulex driver and BIOS available from <http://www.emulex.com>
58. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
59. Requires BIOS 1.47 available in the EMC-approved section of the QLogic website at <http://www.qlogic.com>
60. Requires BIOS v1.83 available from QLogic at <http://www.qlogic.com>
61. The LP9002-E now ships with the LP9002L-E low profile adapter.
62. Switch does not support E-port connectivity. Product is intended for single-switch environments only.
63. This switch is offered by Dell as the Brocade VL2 LC.
64. Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
65. The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
66. ED-64 and ED-1032 not supported for FC5300.
67. NPIV must be enabled for this switch
68. This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
69. Direct connection to EMC Storage Arrays are not supported
70. HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
71. Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
72. Copper connection only. Supported with Passive and Active Twinax cables.
73. Supported kernels: 2.6.32.12-0.7, 2.6.32.13-0.4.1, 2.6.32.13-0.5.1, 2.6.32.19-0.2.1, 2.6.32.19-0.3.1, 2.6.32.23-0.3.1. Confirm kernel support with server vendor.
74. When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
75. Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.

- Supported kernels: 2.6.5-7.244, 2.6.5-7.252, 2.6.5-7.257, 2.6.5-7.267, 2.6.5-7.276, 2.6.5-7.282, 2.6.5-7.283, 2.6.5-7.286, 2.6.5-7.287.3. Confirm kernel support with server vendor.
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by QLogic.
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- Supported kernels: 2.6.16.21-0.8, 2.6.16.21-0.15, 2.6.16.21-0.25, 2.6.16.27-0.6, 2.6.16.27-0.9. Confirm kernel support with server vendor. PowerPath 5.0 support begins with kernel 2.6.16.27-0.6.
- Supported kernels: 2.6.5-7.139, 2.6.5-7.145, 2.6.5-7.147, 2.6.5-7.151. Confirm kernel support with server vendor.
- Supported kernels: 2.6.5-7.201, 2.6.5-7.202.7. Confirm kernel support with server vendor.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- This switch is the same as the IBM SAN256M
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- Supported kernels: 2.6.5-7.308, 2.6.5-7.311, 2.6.5-7.312, 2.6.5-7.314, 2.6.5-7.315, 2.6.5-7.316, 2.6.5-7.317, 2.6.5-7.318, 2.6.5-7.319, 2.6.5-7.321, 2.6.5-7.322, 2.6.5-7.323, 2.6.5-7.324. The 32bit kernel 2.6.5-7.311 is not supported with PowerPath 5.1 SP1. Confirm kernel support with server vendor.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.

19. The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
20. The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
21. When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets of those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
22. The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
23. The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
24. The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
25. CMDCE stands for "Connectrix Manager Data Center Edition"
26. Supported kernels: 2.6.32.12-0.7, 2.6.32.13-0.4.1, 2.6.32.13-0.5.1, 2.6.32.19-0.2.1, 2.6.32.19-0.3.1, 2.6.32.23-0.3.1. Confirm kernel support with server vendor.
27. Supported kernels: 2.6.16.60-0.54.5, 2.6.16.60-0.57.1, 2.6.16.60-0.58.1, 2.6.16.60-0.59.1, 2.6.16.60-0.60.1, 2.6.16.60-0.62.1, 2.6.16.60-0.66.1, 2.6.16.60-0.67.1, 2.6.16.60-0.68.1, 2.6.16.60-0.69.1. Confirm kernel support with server vendor.
28. Minimum Nexus firmware version 4.1(3)N1(1) required.
29. This switch is also known as the Cisco Nexus 5020
30. Switch does not support E-port connectivity. Product is intended for single-switch environments only.
31. This switch is offered by Dell as the Brocade VL2 LC.
32. Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
33. The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
34. Supported kernels: 2.6.16.46-0.12, 2.6.16.46-0.14, 2.6.16.53-0.8, 2.6.16.53-0.16, 2.6.16.54-0.2.3, 2.6.16.54-0.2.5, 2.6.16.54-0.2.8. Confirm kernel support with server vendor.
35. The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
36. The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
37. Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to be installed in bays 8 & 10.
38. Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.
39. Supported kernels: 2.6.27.19-5.1, 2.6.27.21-0.1.2, 2.6.27.23-0.1, 2.6.27.25-0.1.1, 2.6.27.29-0.1.1, 2.6.27.37-0.1.1, 2.6.27.39-0.3.1, 2.6.27.42-0.1.1, 2.6.27.45-0.1.1, 2.6.27.48-0.1.1, 2.6.27.48-0.6.1, 2.6.27.48-0.12.1, 2.6.27.54-0.2.1. Confirm kernel support with server vendor.
40. Supported kernels: 2.6.16.60-0.21, 2.6.16.60-0.23, 2.6.16.60-0.27, 2.6.16.60-0.30, 2.6.16.60-0.31, 2.6.16.60-0.33, 2.6.16.60-0.34, 2.6.16.60-0.35, 2.6.16.60-0.37, 2.6.16.60-0.39.3, 2.6.16.60-0.42.4, 2.6.16.60-0.42.5, 2.6.16.60-0.42.7, 2.6.16.60-0.42.8, 2.6.16.60-0.42.9, 2.6.16.60-0.42.10. Confirm kernel support with server vendor.
41. Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
42. NPV is not supported with SAN-OS versions less than 3.3.1c
43. This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
44. This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
45. ISLs are supported to Cisco FC switches
46. ED-64 and ED-1032 not supported for FC5300.
47. This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
48. Direct connection to EMC Storage Arrays are not supported
49. Support for direct attach to EMC storage only. SAN attach is not supported. Storage array will see connection as FC-SW.
50. The QME2572 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge M610, M710. To update the adapter, please refer to the EMC section on the Qlogic website.
51. Adapters are available with Optical or Copper SFP+ connection types. Connection type on adapter and switch must match.
52. One of the core fabric switches must be configured to be a principle switch. the blade switches should not acquire the role of principle switch.
53. The following setting should be verified: DefaultZoning = False; DefaultVisibility = None
54. Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
55. The Emulex HBAnyware utility does not support the HP VC assigned WWN's.
56. Copper connection only. Supported with Passive and Active Twinax cables.
57. NPIV must be enabled for this switch
58. HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.

- Supported kernels: 2.6.5-7.244, 2.6.5-7.252, 2.6.5-7.257, 2.6.5-7.267, 2.6.5-7.276, 2.6.5-7.282, 2.6.5-7.283, 2.6.5-7.286, 2.6.5-7.287.3. Confirm kernel support with server vendor.
- Internal port(s) on QLogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
- This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
- This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- Supported kernels: 2.6.16.46-0.12, 2.6.16.46-0.14, 2.6.16.46-0.8, 2.6.16.53-0.16, 2.6.16.54-0.2.3, 2.6.16.54-0.2.5, 2.6.16.54-0.2.8. Confirm kernel support with server vendor.
- Direct connection to EMC Storage Arrays are not supported
- NPV is not supported with SAN-OS versions less than 3.3.1c
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- NPIV must be enabled for this switch.
- Supported only in bays 3 and 4 of IBM BladeCenter chassis'.
- One of the core fabric switches must be configured to be a principle switch. the blade switches should not acquire the role of principle switch.
- The following setting should be verified: DefaultZoning = False; DefaultVisibility = None
- Supported kernels: 2.6.16.60-0.21, 2.6.16.60-0.23, 2.6.16.60-0.27, 2.6.16.60-0.30, 2.6.16.60-0.31, 2.6.16.60-0.33, 2.6.16.60-0.34, 2.6.16.60-0.35, 2.6.16.60-0.37, 2.6.16.60-0.39.3, 2.6.16.60-0.42.4, 2.6.16.60-0.42.5, 2.6.16.60-0.42.7, 2.6.16.60-0.42.8, 2.6.16.60-0.42.9, 2.6.16.60-0.42.10. Confirm kernel support with server vendor.
- Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to installed in bays 8 & 10.
- ISLs are supported to Cisco FC switches
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- Supported kernels: 2.6.27.19-5.1, 2.6.27.21-0.1.2, 2.6.27.23-0.1, 2.6.27.25-0.1.1, 2.6.27.29-0.1.1, 2.6.27.37-0.1.1, 2.6.27.39-0.3.1, 2.6.27.42-0.1.1, 2.6.27.45-0.1.1, 2.6.27.48-0.1.1, 2.6.27.48-0.6.1, 2.6.27.48-0.12.1, 2.6.27.54-0.2.1. Confirm kernel support with server vendor.
- Support for direct attach to EMC storage only. SAN attach is not supported. Storage array will see connection as FC-SW.
- This switch is the same as the IBM SAN256M
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on the switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"
- Supported kernels: 2.6.16.21-0.8, 2.6.16.21-0.15, 2.6.16.21-0.25, 2.6.16.27-0.6, 2.6.16.27-0.9. Confirm kernel support with server vendor. PowerPath 5.0 support begins with kernel 2.6.16.27-0.6.
- The IBM OEM equivalent of this switch is supported by EMC as long as the installed firmware and all other switch configuration parameters are in accordance with those specified in the ESM for the corresponding Brocade Silkworm model. Current Brocade and IBM model equivalencies are as follows: Silkworm 3800 / IBM 2109 F16; Silkworm 3900 / IBM 2109 F32; Silkworm 12000 / IBM 2109 M12; Silkworm 24000 / IBM 2109 M14.
- Supported kernels: 2.6.16.60-0.54.5, 2.6.16.60-0.57.1, 2.6.16.60-0.58.1, 2.6.16.60-0.59.1, 2.6.16.60-0.60.1, 2.6.16.60-0.62.1, 2.6.16.60-0.66.1, 2.6.16.60-0.67.1, 2.6.16.60-0.68.1, 2.6.16.60-0.69.1. Confirm kernel support with server vendor.
- Supported kernels: 2.6.32.12-0.7, 2.6.32.13-0.4.1, 2.6.32.13-0.5.1, 2.6.32.19-0.2.1, 2.6.32.19-0.3.1, 2.6.32.23-0.3.1. Confirm kernel support with server vendor.

- Novell OES 2 is supported with Linux native MPIO or via RPQ for EMC PowerPath.
- Novell OES is only supported with Fibre channel connectivity.
- Supported kernels: 2.6.16.46-0.12, 2.6.16.46-0.14, 2.6.16.53-0.8, 2.6.16.53-0.16, 2.6.16.54-0.2.3, 2.6.16.54-0.2.5, 2.6.16.54-0.2.8. Confirm kernel support with server vendor.
- Supported kernels: 2.6.5-7.244, 2.6.5-7.252, 2.6.5-7.257, 2.6.5-7.267, 2.6.5-7.276, 2.6.5-7.282, 2.6.5-7.283, 2.6.5-7.286, 2.6.5-7.287.3. Confirm kernel support with server vendor.
- Supported kernels: 2.6.27.19-5.1, 2.6.27.21-0.1.2, 2.6.27.23-0.1, 2.6.27.25-0.1.1, 2.6.27.29-0.1.1, 2.6.27.37-0.1.1, 2.6.27.39-0.3.1, 2.6.27.42-0.1.1, 2.6.27.45-0.1.1, 2.6.27.48-0.1.1, 2.6.27.48-0.6.1, 2.6.27.48-0.12.1, 2.6.27.54-0.2.1. Confirm kernel support with server vendor.
- Supported kernels: 2.6.16.60-0.21, 2.6.16.60-0.23, 2.6.16.60-0.27, 2.6.16.60-0.30, 2.6.16.60-0.31, 2.6.16.60-0.33, 2.6.16.60-0.34, 2.6.16.60-0.35, 2.6.16.60-0.37, 2.6.16.60-0.39.3, 2.6.16.60-0.42.4, 2.6.16.60-0.42.5, 2.6.16.60-0.42.7, 2.6.16.60-0.42.8, 2.6.16.60-0.42.9, 2.6.16.60-0.42.10. Confirm kernel support with server vendor.
- Novell OES 2 SP1 is supported with this update.
- Supported kernels: 2.6.5-7.308, 2.6.5-7.311, 2.6.5-7.312, 2.6.5-7.314, 2.6.5-7.315, 2.6.5-7.316, 2.6.5-7.317, 2.6.5-7.318, 2.6.5-7.319, 2.6.5-7.321, 2.6.5-7.322, 2.6.5-7.323, 2.6.5-7.324. The 32bit kernel 2.6.5-7.311 is not supported with PowerPath 5.1 SP1. Confirm kernel support with server vendor.
- Supported kernels: 2.6.16.21-0.8, 2.6.16.21-0.15, 2.6.16.21-0.25, 2.6.16.27-0.6, 2.6.16.27-0.9. Confirm kernel support with server vendor. PowerPath 5.0 support begins with kernel 2.6.16.27-0.6.
- Minimum Nexus firmware version 4.1(3)N1(1) required.
- This switch is also known as the Cisco Nexus 5020
- Supported kernels: 2.6.16.60-0.54.5, 2.6.16.60-0.57.1, 2.6.16.60-0.58.1, 2.6.16.60-0.59.1, 2.6.16.60-0.60.1, 2.6.16.60-0.62.1, 2.6.16.60-0.66.1, 2.6.16.60-0.67.1, 2.6.16.60-0.68.1, 2.6.16.60-0.69.1. Confirm kernel support with server vendor.
- NPV is not supported with SAN-OS versions less than 3.3.1c
-

- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
15. This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
 16. ISLs are supported to Cisco FC switches
 17. The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
 18. No special application blades are supported for this switch.
 19. This switch is supported for the maximum port count made available by Qlogic
 20. The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
 21. Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
 22. Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
 23. This switch is the same as the IBM SAN256M
 24. The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
 25. The blade for distance extension is PB-48K-18i
 26. The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
 27. The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
 28. The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
 29. Supported kernels: 2.6.5-7.201, 2.6.5-7.202.7. Confirm kernel support with server vendor.
 30. The QLE2572 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge M610, M710. To update the adapter, please refer to the EMC section on the Qlogic website.
 31. Adapters are available with Optical or Copper SFP+ connection types. Connection type on adapter and switch must match.
 32. When used with Emulex OneConnect CNAs, Cisco firmware 4.2(1)N1(1) is required for NPIV mode support.
 33. One of the core fabric switches must be configured to be a principle switch. the blade switches should not acquire the role of principle switch.
 34. The following setting should be verified: DefaultZoning = False; DefaultVisibility = None
 35. The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
 36. Supported kernels: 2.6.32.12-0.7, 2.6.32.13-0.4.1, 2.6.32.13-0.5.1, 2.6.32.19-0.2.1, 2.6.32.19-0.3.1, 2.6.32.23-0.3.1. Confirm kernel support with server vendor.
 37. The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
 38. Support for direct attach to EMC storage only. SAN attach is not supported. Storage array will see connection as FC-SW.
 39. HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
 40. NPIV must be enabled for this switch
 41. This switch is offered by Dell as the Brocade VL2 LC.
 42. Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
 43. The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
 44. Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
 45. The Emulex HBAnyware utility does not support the HP VC assigned WWW's.
 46. Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to installed in bays 8 & 10.
 47. The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
 48. The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
 49. The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
 50. When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
 51. The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
 52. The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
 53. The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
 54. CMDCE stands for "Connectrix Manager Data Center Edition"
 55. This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
 56. Direct connection to EMC Storage Arrays are not supported
 57. Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
 58. ED-64 and ED-1032 not supported for FC5300.
 59. Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.
 60. Switch does not support E-port connectivity. Product is intended for single-switch environments only.
 61. Supported kernels: 2.6.5-7.139, 2.6.5-7.145, 2.6.5-7.147, 2.6.5-7.151. Confirm kernel support with server vendor.
 62. Minimum firmware v1.0.7.0 required
 63. When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
 64. Copper connection only. Supported with Passive and Active Twinax cables.
 65. FC-AL and FC-SW topologies can co-exist on the same server but not on same HBA, provided that different topologies are attached to different HBAs.
 66. Single HBA zoning is required regardless of the switch being utilized.
 67. Emulex driver and BIOS available from <http://www.emulex.com>
 68. The Emulex LP9XXX HBA family requires a host PCI bus capable of supplying 3.3 VDC bus power. The PCI slot can use either 3.3 VDC or 5.0 VDC signaling interfaces.
 69. Requires BIOS 1.47 available in the EMC-approved section of the QLogic website at <http://www.qlogic.com>
 70. Requires BIOS v1.83 available from QLogic at <http://www.qlogic.com>
 71. The LP9002-E now ships with the LP9002L-E low profile adapter.
 72. Fibre Channel Ports on the Cisco UCS 6120XP and Cisco UCS 6140XP that will be connected to SAN switches must be configured as NP ports. This will require that the SAN switch support NPIV.
 73. Requires minimum UCS firmware bundle 1.3(1c).

- This switch is the same as the IBM SAN256M
- ED-64 and ED-1032 not supported for FC5300.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by Qlogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- Support 512 LUNs/HBA for the Leadville (ssd) driver and 256 LUNs/HBA for the sd driver.
- The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- It is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- EMC supports the Brocade Encryption Switch (BES) based encryption for Celerra NAS NDMP backup to physical tape. This solution is not applicable to EMC disk libraries (EDL). While configuring encryption, please use the CLI. If GUI is used, the WWPON of the Celerra will have to be entered manually.
- For any encryption support based information, please refer to the Encryption table.
- Supported for all FC attached storage (Symmetrix, CLARiiON and Celerra)
- Switch does not support E-port connectivity. Product is intended for single-switch environments only.

- EMC supports ZFS in Solaris 10_x86 11/06 (update 3) or later. The Snapshot and Clone features of ZFS are supported only through Sun Microsystems.
- It is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- EMC supports the Brocade Encryption Switch (BES) based encryption for Celerra NAS NDMP backup to physical tape. This solution is not applicable to EMC disk libraries (EDL). While configuring encryption, please use the CLI. If GUI is used, the WWPN of the Celerra will have to be entered manually.
- For any encryption support based information, please refer to the Encryption table.
- Supported for all FC attached storage (Symmetrix, CLARiiON and Celerra)
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on the switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDC stands for "Connectrix Manager Data Center Edition"
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by Qlogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- This switch is the same as the IBM SAN256M
- ED-64 and ED-1032 not supported for FC5300.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
- Switch does not support E-port connectivity. Product is intended for single-switch environments only.

- For a list of supported guest operating systems, refer to <http://www.vmware.com/resources/compatibility/search.php?deviceCategory=software>. For additional information refer to the Guest Operating System Installation Guide at http://www.vmware.com/pdf/GuestOS_guide.pdf
- EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LPe1150-E.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- This switch is offered by Dell as the Brocade VL2 LC.
- Adapters are available with Optical or Copper SFP+ connection types. Connection type on adapter and switch must match.
- This switch is also known as the Cisco Nexus 5020
- Oracle Database 11g R1 is supported on VMware vSphere 4.0 Virtual Machines with Symmetrix, CLARiiON, and Celerra storage platforms. For details, refer to <http://www.vmware.com/solutions/partners/alliances/oracle.html>.
- Supported with vMotion.
- Supports 2-node Microsoft Cluster Services (MSCS) with Windows 2003 and Windows 2008 virtual machines in CIB (Cluster in Box) and CAB (Cluster across Boxes) configurations. VMware NMP (Native Multipathing) and PowerPath/VE are supported with MSCS. The following SCSI Controllers are supported with VMware and MSCS: Windows 2000 Server LSI Logic Parallel, Windows Server 2003 LSI Logic Parallel, Windows Server 2008 LSI Logic Parallel. You must download the LSI Logic Parallel driver for Windows 2000 Server on the LSI Web site.
- All released updates to ESX Server version are supported unless otherwise specified by a footnote. Please contact server vendor for the update level required for a specific server.
- Minimum Nexus firmware version 4.1(3)N1(1) required.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
- The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
- The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on the switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- CMDCE stands for "Connectrix Manager Data Center Edition"
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
- No special application blades are supported for this switch.
- This switch is supported for the maximum port count made available by Qlogic
- The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
- This switch is the same as the IBM SAN256M
- The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
- The blade for distance extension is PB-48K-18i
- The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
- The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
- Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
- Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
- The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
- Switch does not support E-port connectivity. Product is intended for single-switch environments only.
-

- VMware ESX does not have dependencies on specific FC-switches and has been found to be broadly interoperable with current generation FC-SW2 compliant Fibre Channel switches. The listed FC-switches reflect the configurations qualified for support with EMC storage arrays.
35. The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
 36. The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
 37. This HBA is equivalent to the Qlogic QLE2562
 38. This HBA is equivalent to the Qlogic QLE2560
 39. For details on Microsoft Cluster Services (MSCS) support with Windows guest operating systems, refer to the Storage/SAN Compatibility Guide For ESX Server 3.x on www.vmware.com.
 40. The QME2572 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge M610, M710. To update the adapter, please refer to the EMC section on the Qlogic website.
 41. This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
 42. Support for direct attach to EMC storage only. SAN attach is not supported. Storage array will see connection as FC-SW.
 43. Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to installed in bays 8 & 10.
 44. HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
 45. One of the core fabric switches must be configured to be a principle switch. the blade switches should not acquire the role of principle switch.
 46. The following setting should be verified: DefaultZoning = False; DefaultVisibility = None
 47. This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
 48. ISLs are supported to Cisco FC switches
 49. Fibre Channel over Ethernet (FCoE) is supported with VMware ESX Server 3.5 U2 or higher.
 50. ED-64 and ED-1032 not supported for FC5300.
 51. NPIV must be enabled for this switch
 52. NPV is not supported with SAN-OS versions less than 3.3.1c
 53. This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
 54. Direct connection to EMC Storage Arrays are not supported
 55. Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
 56. The Emulex HBAnyware utility does not support the HP VC assigned WWN's.
 57. Minimum firmware v1.0.7.0 required
 58. It is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
 59. EMC supports the Brocade Encryption Switch (BES) based encryption for Celerra NAS NDMP backup to physical tape. This solution is not applicable to EMC disk libraries (EDL). While configuring encryption, please use the CLI. If GUI is used, the WWPEN of the Celerra will have to be entered manually.
 60. For any encryption support based information, please refer to the Encryption table.
 61. Supported for all FC attached storage (Symmetrix, CLARiiON and Celerra)
 62. Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.
 63. Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
 64. Fibre Channel Ports on the Cisco UCS 6120XP and Cisco UCS 6140XP that will be connected to SAN switches must be configured as NP ports. This will require that the SAN switch support NPIV.
 65. Copper connection only. Supported with Passive and Active Twinax cables.

- Adapters are available with Optical or Copper SFP+ connection types. Connection type on adapter and switch must match.
- This switch is also known as the Cisco Nexus 5020
- For a list of supported guest operating systems, refer to <http://www.vmware.com/resources/compatibility/search.php?deviceCategory=software>. For additional information refer to the Guest Operating System Installation Guide at http://www.vmware.com/pdf/GuestOS_guide.pdf
- Oracle Database 11g R1 is supported on VMware vSphere 4.0 Virtual Machines with Symmetrix, CLARiiON, and Celerra storage platforms. For details, refer to <http://www.vmware.com/solutions/partners/alliances/oracle.html>.
- Supported with vMotion.
- Supports 2-node Microsoft Cluster Services (MSCS) with Windows 2003 and Windows 2008 virtual machines in CIB (Cluster in Box) and CAB (Cluster across Boxes) configurations. VMware NMP (Native Multipathing) and PowerPath/VE are supported with MSCS. The following SCSI Controllers are supported with VMware and MSCS: Windows 2000 Server LSI Logic Parallel, Windows Server 2003 LSI Logic Parallel, Windows Server 2008 LSI Logic Parallel. You must download the LSI Logic Parallel driver for Windows 2000 Server on the LSI Web site.
- All released updates to ESX Server version are supported unless otherwise specified by a footnote. Please contact server vendor for the update level required for a specific server.
- Minimum Nexus firmware version 4.1(3)N1(1) required.
- The Scimitar or FC4-16AP application blade is also supported in the Brocade DCX or Connectrix ED-DCX-B chassis, for RecoverPoint based configurations only.
- The Brocade FX8-24/Connectrix PB-DCX-FX8-24 application blade is supported if the chassis is running FOS v6.3.0b and above.
- The routing feature is available from ESM supported Brocade FOS v6.1.0c onwards. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
- When using the Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or Brocade DCX-4S/ED-DCX-4S-B, it is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b) the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported

- v6.x versions)
13. The Brocade FS8-18 Encryption blade/Connectrix PB-DCX-16EB blade in the Brocade DCX/ED-DCX-B or in the Brocade DCX-4S/ED-DCX-4S-B is supported for all FC attached storage (Symmetrix, CLARiiON and Celerra). For any encryption support based information, please refer to the encryption table.
 14. The routing feature is available from ESM supported Brocade FOS v6.2.0c onwards on this switch. The Brocade Integrated Routing License is required. The switch can act as an FC router (FCR) only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes and also apply to all integrated router based configurations.
 15. The Brocade 7800/Connectrix MP-7800B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
 16. CMDCE stands for "Connectrix Manager Data Center Edition"
 17. This switch is offered by Dell as the Brocade VL2 LC.
 18. Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
 19. The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602, SB5800V, SB5802V 10G capable ports.
 20. No special application blades are supported for this switch.
 21. This switch is supported for the maximum port count made available by Qlogic
 22. The 10G Blade SB9010-10G is supported for connectivity with other SB9000 10G blades and the SB5200, SB5202, SB5600, SB5602 10G capable ports.
 23. This switch is the same as the IBM SAN256M
 24. The 16-port 8Gbit blade (FC8-16) and the 32-port 8Gbit blade (FC8-32) are supported in the Brocade 48000 or EMC Connectrix ED-48000B chassis running supported FOS v6.0.0c and up.
 25. The blade for distance extension is PB-48K-18i
 26. The 10G FC10-6(Xenon) blade is supported for ISL connectivity from Xenon to Xenon only.
 27. The Brocade FR4-18i blade can be configured to be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
 28. The Brocade 7500/Connectrix MP-7500B switch can also be used as an FC SAN router only if there are Brocade B-series or M-series switches in the edge fabric. The FCR based scalability limits are provided in the firmware release notes.
 29. Do not attempt to manage an ED-64M containing XPM (10 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 at a minimum.
 30. Do not attempt to manage an ED-140M containing XPM (10 Gb/sec) or QPM (4 Gb/sec) port modules with Connectrix Manager 7.x. The XPM requires Connectrix Manager 8.7.1 and the QPM requires Connectrix Manager 8.9.0.
 31. The minimum firmware revision for the ES-4300 is 5.05.00 (This firmware revision is only to be used on ES-4300)
 32. Fibre channel arbitrated loop connections (direct attach) are not supported for EMC Storage Arrays.
 33. The Emulex HBAAnyware utility does not support the HP VC assigned WWN's.
 34. Switch does not support E-port connectivity. Product is intended for single-switch environments only.
 35. This HBA is equivalent to the Qlogic QLE2562
 36. This HBA is equivalent to the Qlogic QLE2560
 37. The QLE2562 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
 38. The QLE2560 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge R610, R710, and T610. To update the adapter, please refer to the EMC section on the Qlogic website.
 39. The QME2572 8Gb FC adapter must be updated for use in PCIe Gen2 servers Dell PowerEdge M610, M710. To update the adapter, please refer to the EMC section on the Qlogic website.
 40. EMC supported drivers, firmware, and boot BIOS can be downloaded from <http://www.emulex.com> in the EMC section, by obtaining the supported driver for the Emulex LPe1150-E.
 41. VMWare ESX does not have dependencies on specific FC-switches and has been found to be broadly interoperable with current generation FC-SW2 compliant Fibre Channel switches. The listed FC-switches reflect the configurations qualified for support with EMC storage arrays.
 42. Minimum firmware v1.0.7.0 required
 43. Requires IBM Multi-Switch Interconnect Module for IBM BladeCenter (39Y9314) installed in IBM BladeCenter H and with appropriate fibre channel switch modules to installed in bays 8 & 10.
 44. This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
 45. Support for direct attach to EMC storage only. SAN attach is not supported. Storage array will see connection as FC-SW.
 46. One of the core fabric switches must be configured to be a principle switch. the blade switches should not acquire the role of principle switch.
 47. The following setting should be verified: DefaultZoning = False; DefaultVisibility = None
 48. This switch module supports ISL connection to Cisco FC switches or direct connection to EMC Storage Arrays only.
 49. ISLs are supported to Cisco FC switches
 50. ED-64 and ED-1032 not supported for FC5300.
 51. NPIV must be enabled for this switch
 52. NPV is not supported with SAN-OS versions less than 3.3.1c
 53. This switch module is supported in both legacy switch module positions (bays 3 and 4) of all IBM BladeCenter Chassis and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenterTM (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
 54. Direct connection to EMC Storage Arrays are not supported
 55. HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
 56. It is required that switches attached to hosts and targets or those that are part of the encryption flow be operating with the following minimum specified levels:(a) The 2Gb/4Gb Brocade/Connectrix B series switches must operate with FOS v5.3.1b or later, and (b)the 4Gb/8Gb Brocade/Connectrix B series switches must operate with FOS v6.1.0e, v6.1.1 or later (4Gb platforms may use v5.3.1b but are recommended to use the supported v6.x versions)
 57. EMC supports the Brocade Encryption Switch (BES) based encryption for Celerra NAS NDMP backup to physical tape. This solution is not applicable to EMC disk libraries (EDL). While configuring encryption, please use the CLI. If GUI is used, the WWPN of the Celerra will have to be entered manually.
 58. For any encryption support based information, please refer to the Encryption table.
 59. Supported for all FC attached storage (Symmetrix, CLARiiON and Celerra)
 60. Qlogic 8 Gb Intelligent Passthru Switch Module works as a NPIV gateway, requiring the SAN switches to support NPIV.
 61. Internal port(s) on Qlogic or McData 4Gb FC switch module(s) must be set to 4Gb (if 4Gb operation is required or to 2Gb if 2Gb operation is required)
 62. Fibre Channel Ports on the Cisco UCS 6120XP and Cisco UCS 6140XP that will be connected to SAN switches must be configured as NP ports. This will require that the SAN switch support NPIV.
 63. Copper connection only. Supported with Passive and Active Twinax cables.

1. Flex Address support requires CMC 1.1 or greater. Please visit <http://support.dell.com> to obtain the latest CMC update
2. This server has both PCI-X and PCI-Express slots, but only PCI-Express HBAs listed under Host Bus Adapter are supported.
3. Paxville-based PowerEdge models require minimum A04 system BIOS.
4. NaviCLI 6.28.10.3.11
5. Navisphere Array Initialization Tool version 6.28.10.3.11
6. PowerPath 5.2.1, 5.3 supported.
7. NaviAgent 6.28.11.0.13
8. Use latest EMC VDS Provider version
9. PowerEdge 2550 and PowerVault 775N support a maximum of 2 Emulex HBAs at one time and the total PCI power cannot exceed 20 Watts.
10. Paxville-based PowerEdge models require minimum A02 system BIOS.

1. HP Netserver LH3000 U3 is supported in the same configurations as the standard LH 3000.
2. Please refer to <https://h20392.www2.hp.com/portal/swdepot/displayProductInfo.do?productNumber=BL8x0-i2> for HP-UX software requirements
3. Please see the HP website for supported BL c-Class model numbers.
The supported model numbers are available in the quickspecs documents available for each BL c-Class blade.
- 4.

- HP-UX BL860c with the following processors.
 AD394A Dual-core 1.42GHz processor with 12MB cache
 AD395A Single-core 1.6GHz processor with 6MB cache
 AD396A Dual-core 1.67GHz processor with 18MB cache
 Require the following firmware recipe 0.95
 Minimum required OPERATING SYSTEMS:
 HP-UX 11i v2 HWE 0706
 HP-UX 11i v3 HWE 0709
5. Must add "set sd:sd_max_throttle=20" and "set sd:sd_io_time=60" in the /etc/system file for CLARiiON or Symmetrix attach. Do not include quotes on these entries.
 6. HPQ (Compaq) Proliant server models that are not listed in the ESM but are only differentiated from supported models by an "R" designator, are rack-mountable servers and are supported.
 7. Includes both Pentium PRO and XEON models
 8. Rx8640/Rx7640 are built around sx2000 chip set and requires firmware recipe 4.3.2
 9. The integrity Superdome/Rx8640/Rx7640 servers are built around the sx2000 chip set and requires Madison9M 1.7 GHz processors.
 10. Integrity superdome/sx2000 requires firmware recipe 4.3e
 11. This server is equipped with plastic shielding around the PCI slots. Since the PCI slots are 32-bit, this shielding prohibits 64-bit HBAs from properly seating in the PCI slots. To accommodate 64-bit HBAs, this shielding must be removed, or modified to allow the 64-bit HBA to fully seat in the 32-bit slots.
 12. HP-UX rx3600 & rx6600 with the following processors.
 AD390A Dual-core 1.42GHz processor with 12MB cache
 AD391A Dual-core 1.67GHz processor with 18MB cache
 Require the following firmware recipe 0.94
 Minimum required OPERATING SYSTEMS:
 HP-UX 11i v2 HWE 0706
 HP-UX 11i v3 HWE 0709
 13. HP-UX: The integrity Superdome/Rx8640/Rx7640 are built around sx2000 chip set and Support Madison9M 1.6 GHz processors. The minimum supported Operating System is HP-UX 11i V2 Sept 2004 release or later with the following components from the March 2006, release.
 +The HWEnable 11i Patch Bundle
 +ignite-UX
 +online Diags
 +New and updated I/O driver bundles.
 Minimum required firmware recipe 4.3.2 for Madison 9m processors.
 14. HP-UX: The integrity Superdome/Rx8640/Rx7640 are built around sx2000 chip set and supports the Montecito processors
 AB451A 1.4GHz 12MB cache dual-core Intel processor
 AB584A 1.6GHz 18MB cache dual-core Intel processor
 AB452A 1.6GHz 24MB cache dual-core Intel processor
 The minimum supported Operating System is HP-UX 11i V2 June 2006 or later. Minimum required firmware recipe 2.0 for Montecito processors.
 15. HP-UX: The integrity Rx8640/Rx7640 are built around sx2000 chip set and supports the Montvale processors,
 AD362A 1.4GHz 12MB cache dual-core Intel processor
 AD365A 1.6GHz 18MB cache dual-core Intel processor
 AD368A 1.6GHz 24MB cache dual-core Intel processor
 Minimum supported:
 HP-UX 11i v2 Release for June 2007 or later; Support for vPars 4.04
 HP-UX 11i v3 Release for Sept 2007 or later; Support for vPars A.05.02
 Minimum required firmware version 4.0 for support
 16. HP-UX rx2660 with the following processors.
 AD392A Single-core 1.6GHz processor with 12MB cache
 AH240A Dual-core 1.42GHz processor with 12MB cache
 AH241A Dual-core 1.67GHz processor with 18MB cache
 Require the following firmware recipe 0.94
 Minimum required OPERATING SYSTEMS:
 HP-UX 11i v2 HWE 0706
 HP-UX 11i v3 HWE 0709
 17. Requires HP-UX 11i v2.0 0609 and 0612 AR and patches PHNE_34671 and PHNE_33732
 18. Minimum OS Support: HP-UX 11.11 v1.0 Dec '03 HWE Patch Bundle
 19. HP rp3410-2: clusters supported on 2-cpu systems only.
 20. HP rp3410-2: To accommodate pvlincs and networking requirements of serviceguard on a 2 io slot system, at least one of the hbases must be an A9782A or an A9784A combo card.

1. This system is supported only when the IBM ServeRAID 8i SAS RAID controller (13N227) is installed or when the server is being booted remotely from external storage.
2. This firmware revisions includes support for AIX 5.3 and supports > 12 meg boot images for external boot.
3. Single node support only with Emulex 4Gb HBAs
4. Integrated System Management Processor minimum firmware revision BYBT07A
5. PowerPath not currently supported.
6. **Certain HBA models may be too large to fit into this server's PCI or PCI-X slots. A low-profile HBA may be required. Consult your server owner's guide before purchasing HBAs for this server.**
7. Support for 4GB fibre channel HBAs requires an IBM SPORE to be submitted to IBM with a request of system BIOS 56A.
8. Integrated System Management Processor minimum firmware revision BQ8T21A
9. System/Service processor combined microcode Version RH020413 dated 05/22/2002 or later.
10. EMC VolumeLogix Software required for multiple BladeServers when direct-attached to EMC Symmetrix storage.
11. Emulex PCI-X and PCI-Express adapters including Qlogic 4Gb PCI-X and PCI-Express adapters are supported in the x346 (8840) only when IBM ServerRAID-7K (71P8642 or 30R8800) is installed with most current firmware and BIOS.
12. Only Model 8028 is supported with VMware ESX Server 3.5.

1. Supports Stratus OS 1.3.X through 2.1.X.
2. Bus Enumeration Issue Causes Problems using SYMCLI SCSI bus enumeration of disks will change depending on cold boot or warm boot. This causes symcli commands to fail because the path is changed and SYMCLI can no longer communicate with the Symmetrix.
By "shutdown" and booting system, internal disks are assigned first, followed by Symmetrix disks.
By "restart" the system, Symmetrix disks are assigned first, followed by internal disks. Drive letter are not changed in both cases.
The workaround is to perform "symcfg discover" after rebooting.
3. Systems running Stratus OS 1.2.2.X or 1.3 require MS hotfix Q327477 and VxVM 2.7 Hotfix 5A. Stratus OS 1.3.1 and above incorporates these hotfixes.
4. HP-UX 11iv2.0 Required O.S Sept 2006, and application Release December 2006 and PHNE_34671, PHNE_33732.
5. HP rp3410-2: clusters supported on 2-cpu systems only.
6. HP rp3410-2: To accommodate pvlincs and networking requirements of serviceguard on a 2 io slot system, at least one of the hbas must be an A9782A or an A9784A combo card.
7. Minimum OS Support: HP-UX 11.11 v1.0 Dec '03 HWE Patch Bundle
8. Supports Stratus OS 4.1 FTSSS Release
9. 3.2Ghz and 3.6Ghz versions of this server are supported.
10. Supports Stratus OS 2.0.X through 2.1.X.

Nanobay

Nanobay		
No.	Host System	Minimum Host Bios
1	Nanobay JR1400, Nanobay JR2400, Nanobay Nano E8501T, Nanobay Nano SR4850, Nanobay Nano SR6850	Generic Vendor DIGITAL Server 3300

Ockam

Ockam		
No.	Host System	Minimum Host Bios
1	Ockam ES OS-6400, Ockam OS-7000	Generic Vendor DIGITAL Server 3300

PowerLeader

PowerLeader		
No.	Host System	Minimum Host Bios
1	PowerLeader PR1700, PowerLeader PR1700 G2, PowerLeader PR2700, PowerLeader PR2700 G2, PowerLeader PR4850, PowerLeader PR6850, PowerLeader PT6850	Generic Vendor DIGITAL Server 3300

R-Style

R-Style		
No.	Host System	Minimum Host Bios
1	R-Style MARSHALL NP281r, R-Style MARSHALL NP282r, R-Style MARSHALL NP491	Generic Vendor DIGITAL Server 3300

Samsung

Samsung		
No.	Host System	Minimum Host Bios
1	Samsung ES470, Samsung ES570, Samsung ZSS150, Samsung ZSS230-D, Samsung ZSS230-T	Generic Vendor DIGITAL Server 3300

Stratus

Stratus		
No.	Host System	Minimum Host Bios
1	Stratus ftServer 2300 ⁸ , Stratus ftServer 2400 ⁷ , Stratus ftServer 3210 ^{1, 2, 3, 4} , Stratus ftServer 3220 ^{1, 2, 3, 4} , Stratus ftServer 3300 ⁶ , Stratus ftServer 4300 ⁷ , Stratus ftServer 4600 ⁷ , Stratus ftServer 5240, Stratus ftServer 5600 ⁶ , Stratus ftServer 5700, Stratus ftServer 6310 ⁶ , Stratus ftServer 6500, Stratus ftServer 6600 ⁶	Generic Vendor DIGITAL Server 3300

1. Requires Stratus ftServer OS 1.4.x or greater.
2. ftServer OS 1.4.x requires PowerPath 3.0.2.
3. Systems running Stratus OS 1.2.2.X or 1.3 require MS hotfix Q327477 and VxVM 2.7 Hotfix 5A. Stratus OS 1.3.1 and above incorporates these hotfixes.
4. Supports Stratus OS 1.2.2.X through 2.1.X.
5. Supports Stratus OS ftSSS 7.0.0/7.0.2 release.
6. Supports Stratus OS 3.1.x.
7. Supports Stratus OS 4.1 FTSSS Release
8. Requires Stratus OS 3.1

Sun

Sun		
No.	Host System	Minimum Host Bios

- Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric. For additional information regarding how to count the number of hops in a fabric, refer to the EMC Networked Storage Topology Guide.
- Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- McDATA's "Open Fabric Mode 1.0" and Cisco's "Interopmode 1" are fully supported for McDATA and Cisco interop. Configurations consisting of McDATA's "McDATA Fabric Mode 1.0" and Cisco's "Interopmode 4" are supported when using EOS 9.7.2 and SAN-OS v3.3.1c, and also when using EOS 9.8.1 and NX-OS 4.1.1b. For support of interopmode with previous versions, submit an RPQ. For a complete list of known issues with McDATA and Cisco interop, see Primus case EMC147089.
- No Application Blades are currently supported in the 48000 when running in a heterogeneous switch interoperability environment.
- The maximum number of domains supported in Fabric is 24 with total ports available: 1280, maximum F_Ports devices: 1200, Minimum Fabric OS Version required: v 3.1.2a, v4.2.0b.
- The following Cisco and Brocade interopmode configurations are supported
Cisco's "Interopmode 1" and Brocade's "Interopmode (true)"
Cisco's "Interopmode 3" and Brocade's "Interopmode (false)" with Core PID enabled
Please note: Fabric Binding as well as any Brocade or Cisco security features are not supported.
Other feature limitations may apply.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The maximum number of domains supported in Fabric is 55 with total ports available: 2560, maximum F_ports devices: 2300, Minimum Fabric OS Version required: v5.1.0a.
- OEM equivalents of switches listed in this table are supported by EMC as long as the installed firmware and all other configuration parameters are in accordance with switches specified in this table.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPIV must be enabled for this switch
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- the configuration is customer instalable
- ECC discovery is supported.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- With the "Integrated Routing" feature enabled, this connectivity can be supported with either of the Brocade DCX, DCX-4S, 300, 5100, 5300 or their Connectrix-B series versions acting as a SAN router. EX ports can be configured on either one of these switches for fibre channel routing.
- An RPQ is required for any McData switches running in a Brocade FAP environment.
- The "Frame Redirect" feature cannot be enabled for this connectivity in a Recover Point set up with the 7600 acting as the intelligent switch. In an RP environment, all brocade switches on the data path must run FOS v5.3.0c and up if the "Frame redirect" feature is enabled. Thus, the Brocade 12000, 3200, 3800 or the Connectrix ED-12000B, DS-3200B, DS-3800B cannot be in the data path for "Frame Redirect" based configurations. This would also apply if the Scimitar or FC4-16AP application blade is used in an RP configuration instead of the 7600.
- For Invista or Recoverpoint with the AP-7600B or PB-48K-AP4-18 application blade, please refer to the specific application version release notes and/or support matrix for the minimum switch firmware versions supported with that application release.
- This connectivity is also supported for the Brocade 7500 switch acting as a SAN router. EX ports can be configured on the Brocade 7500 for fibre channel routing.

CNT

For SAN Router support with the switches listed on this table, please see the SAN Router tables on E-Lab Interoperability Navigator.

- Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric. For additional information regarding how to count the number of hops in a fabric, refer to the EMC Networked Storage Topology Guide.
- Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- McDATA's "Open Fabric Mode 1.0" and Cisco's "Interopmode 1" are fully supported for McDATA and Cisco interop. Configurations consisting of McDATA's "McDATA Fabric Mode 1.0" and Cisco's "Interopmode 4" are supported when using EOS 9.7.2 and SAN-OS v3.3.1c, and also when using EOS 9.8.1 and NX-OS 4.1.1b. For support of interopmode with previous versions, submit an RPQ. For a complete list of known issues with McDATA and Cisco interop, see Primus case EMC147089.
- No Application Blades are currently supported in the 48000 when running in a heterogeneous switch interoperability environment.
- The maximum number of domains supported in Fabric is 24 with total ports available: 1280, maximum F_Ports devices: 1200, Minimum Fabric OS Version required: v 3.1.2a, v4.2.0b.
- The following Cisco and Brocade interopmode configurations are supported
Cisco's "Interopmode 1" and Brocade's "Interopmode (true)"
Cisco's "Interopmode 3" and Brocade's "Interopmode (false)" with Core PID enabled
Please note: Fabric Binding as well as any Brocade or Cisco security features are not supported. Other feature limitations may apply.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The maximum number of domains supported in Fabric is 55 with total ports available: 2560, maximum F_ports devices: 2300, Minimum Fabric OS Version required: v5.1.0a.
- OEM equivalents of switches listed in this table are supported by EMC as long as the installed firmware and all other configuration parameters are in accordance with switches specified in this table.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPIV must be enabled for this switch
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- the configuration is customer instalable
- ECC discovery is supported.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- With the "Integrated Routing" feature enabled, this connectivity can be supported with either of the Brocade DCX, DCX-4S, 300, 5100, 5300 or their Connectrix-B series versions acting as a SAN router. EX ports can be configured on either one of these switches for fibre channel routing.
- An RPQ is required for any McData switches running in a Brocade FAP environment.
- The "Frame Redirect" feature cannot be enabled for this connectivity in a Recover Point set up with the 7600 acting as the intelligent switch. In an RP environment, all brocade switches on the data path must run FOS v5.3.0c and up if the "Frame redirect" feature is enabled. Thus, the Brocade 12000, 3200, 3800 or the Connectrix ED-12000B, DS-3200B, DS-3800B cannot be in the data path for "Frame Redirect" based configurations. This would also apply if the Scimitar or FC4-16AP application blade is used in an RP configuration instead of the 7600.
- For Invista or Recoverpoint with the AP-7600B or PB-48K-AP4-18 application blade, please refer to the specific application version release notes and/or support matrix for the minimum switch firmware versions supported with that application release.
- This connectivity is also supported for the Brocade 7500 switch acting as a SAN router. EX ports can be configured on the Brocade 7500 for fibre channel routing.

Cisco

For SAN Router support with the switches listed on this table, please see the SAN Router tables on E-Lab Interoperability Navigator.

- Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric. For additional information regarding how to count the number of hops in a fabric, refer to the EMC Networked Storage Topology Guide.
- Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- McDATA's "Open Fabric Mode 1.0" and Cisco's "Interopmode 1" are fully supported for McDATA and Cisco interop. Configurations consisting of McDATA's "McDATA Fabric Mode 1.0" and Cisco's "Interopmode 4" are supported when using EOS 9.7.2 and SAN-OS v3.3.1c, and also when using EOS 9.8.1 and NX-OS 4.1.1b. For support of interopmode with previous versions, submit an RPQ. For a complete list of known issues with McDATA and Cisco interop, see Primus case EMC147089.
- No Application Blades are currently supported in the 48000 when running in a heterogeneous switch interoperability environment.
- The maximum number of domains supported in Fabric is 24 with total ports available: 1280, maximum F_Ports devices: 1200, Minimum Fabric OS Version required: v 3.1.2a, v4.2.0b.
- The following Cisco and Brocade interopmode configurations are supported
Cisco's "Interopmode 1" and Brocade's "Interopmode (true)"
Cisco's "Interopmode 3" and Brocade's "Interopmode (false)" with Core PID enabled
Please note: Fabric Binding as well as any Brocade or Cisco security features are not supported.
Other feature limitations may apply.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The maximum number of domains supported in Fabric is 55 with total ports available: 2560, maximum F_ports devices: 2300, Minimum Fabric OS Version required: v5.1.0a.
- OEM equivalents of switches listed in this table are supported by EMC as long as the installed firmware and all other configuration parameters are in accordance with switches specified in this table.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPIV must be enabled for this switch
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- the configuration is customer instalable
- ECC discovery is supported.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- With the "Integrated Routing" feature enabled, this connectivity can be supported with either of the Brocade DCX, DCX-4S, 300, 5100, 5300 or their Connectrix-B series versions acting as a SAN router. EX ports can be configured on either one of these switches for fibre channel routing.
- An RPQ is required for any McData switches running in a Brocade FAP environment.
- The "Frame Redirect" feature cannot be enabled for this connectivity in a Recover Point set up with the 7600 acting as the intelligent switch. In an RP environment, all brocade switches on the data path must run FOS v5.3.0c and up if the "Frame redirect" feature is enabled. Thus, the Brocade 12000, 3200, 3800 or the Connectrix ED-12000B, DS-3200B, DS-3800B cannot be in the data path for "Frame Redirect" based configurations. This would also apply if the Scimitar or FC4-16AP application blade is used in an RP configuration instead of the 7600.
- For Invista or Recoverpoint with the AP-7600B or PB-48K-AP4-18 application blade, please refer to the specific application version release notes and/or support matrix for the minimum switch firmware versions supported with that application release.
- This connectivity is also supported for the Brocade 7500 switch acting as a SAN router. EX ports can be configured on the Brocade 7500 for fibre channel routing.

Dell

For SAN Router support with the switches listed on this table, please see the SAN Router tables on E-Lab Interoperability Navigator.

- Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric. For additional information regarding how to count the number of hops in a fabric, refer to the EMC Networked Storage Topology Guide.
- Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- McDATA's "Open Fabric Mode 1.0" and Cisco's "Interopmode 1" are fully supported for McDATA and Cisco interop. Configurations consisting of McDATA's "McDATA Fabric Mode 1.0" and Cisco's "Interopmode 4" are supported when using EOS 9.7.2 and SAN-OS v3.3.1c, and also when using EOS 9.8.1 and NX-OS 4.1.1b. For support of interopmode with previous versions, submit an RPQ. For a complete list of known issues with McDATA and Cisco interop, see Primus case EMC147089.
- No Application Blades are currently supported in the 48000 when running in a heterogeneous switch interoperability environment.
- The maximum number of domains supported in Fabric is 24 with total ports available: 1280, maximum F_Ports devices: 1200, Minimum Fabric OS Version required: v 3.1.2a, v4.2.0b.
- The following Cisco and Brocade interopmode configurations are supported
Cisco's "Interopmode 1" and Brocade's "Interopmode (true)"
Cisco's "Interopmode 3" and Brocade's "Interopmode (false)" with Core PID enabled
Please note: Fabric Binding as well as any Brocade or Cisco security features are not supported. Other feature limitations may apply.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The maximum number of domains supported in Fabric is 55 with total ports available: 2560, maximum F_ports devices: 2300, Minimum Fabric OS Version required: v5.1.0a.
- OEM equivalents of switches listed in this table are supported by EMC as long as the installed firmware and all other configuration parameters are in accordance with switches specified in this table.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPIV must be enabled for this switch
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- the configuration is customer instalable
- ECC discovery is supported.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- With the "Integrated Routing" feature enabled, this connectivity can be supported with either of the Brocade DCX, DCX-4S, 300, 5100, 5300 or their Connectrix-B series versions acting as a SAN router. EX ports can be configured on either one of these switches for fibre channel routing.
- An RPQ is required for any McData switches running in a Brocade FAP environment.
- The "Frame Redirect" feature cannot be enabled for this connectivity in a Recover Point set up with the 7600 acting as the intelligent switch. In an RP environment, all brocade switches on the data path must run FOS v5.3.0c and up if the "Frame redirect" feature is enabled. Thus, the Brocade 12000, 3200, 3800 or the Connectrix ED-12000B, DS-3200B, DS-3800B cannot be in the data path for "Frame Redirect" based configurations. This would also apply if the Scimitar or FC4-16AP application blade is used in an RP configuration instead of the 7600.
- For Invista or Recoverpoint with the AP-7600B or PB-48K-AP4-18 application blade, please refer to the specific application version release notes and/or support matrix for the minimum switch firmware versions supported with that application release.
- This connectivity is also supported for the Brocade 7500 switch acting as a SAN router. EX ports can be configured on the Brocade 7500 for fibre channel routing.

Digital Henge

For SAN Router support with the switches listed on this table, please see the SAN Router tables on E-Lab Interoperability Navigator.

- Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric. For additional information regarding how to count the number of hops in a fabric, refer to the EMC Networked Storage Topology Guide.
- Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- McDATA's "Open Fabric Mode 1.0" and Cisco's "Interopmode 1" are fully supported for McDATA and Cisco interop. Configurations consisting of McDATA's "McDATA Fabric Mode 1.0" and Cisco's "Interopmode 4" are supported when using EOS 9.7.2 and SAN-OS v3.3.1c, and also when using EOS 9.8.1 and NX-OS 4.1.1b. For support of interopmode with previous versions, submit an RPQ.
For a complete list of known issues with McDATA and Cisco interop, see Primus case EMC147089.
- No Application Blades are currently supported in the 48000 when running in a heterogeneous switch interoperability environment.
- The maximum number of domains supported in Fabric is 24 with total ports available: 1280, maximum F_Ports devices: 1200, Minimum Fabric OS Version required: v 3.1.2a, v4.2.0b.
- The following Cisco and Brocade interopmode configurations are supported
Cisco's "Interopmode 1" and Brocade's "Interopmode (true)"
Cisco's "Interopmode 3" and Brocade's "Interopmode (false)" with Core PID enabled
Please note: Fabric Binding as well as any Brocade or Cisco security features are not supported.
Other feature limitations may apply.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The maximum number of domains supported in Fabric is 55 with total ports available: 2560, maximum F_ports devices: 2300, Minimum Fabric OS Version required: v5.1.0a.
- OEM equivalents of switches listed in this table are supported by EMC as long as the installed firmware and all other configuration parameters are in accordance with switches specified in this table.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPIV must be enabled for this switch
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- the configuration is customer instalable
- ECC discovery is supported.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- With the "Integrated Routing" feature enabled, this connectivity can be supported with either of the Brocade DCX, DCX-4S, 300, 5100, 5300 or their Connectrix-B series versions acting as a SAN router. EX ports can be configured on either one of these switches for fibre channel routing.
- An RPQ is required for any McData switches running in a Brocade FAP environment.
- The "Frame Redirect" feature cannot be enabled for this connectivity in a Recover Point set up with the 7600 acting as the intelligent switch. In an RP environment, all brocade switches on the data path must run FOS v5.3.0c and up if the "Frame redirect" feature is enabled. Thus, the Brocade 12000, 3200, 3800 or the Connectrix ED-12000B, DS-3200B, DS-3800B cannot be in the data path for "Frame Redirect" based configurations. This would also apply if the Scimitar or FC4-16AP application blade is used in an RP configuration instead of the 7600.
- For Invista or Recoverpoint with the AP-7600B or PB-48K-AP4-18 application blade, please refer to the specific application version release notes and/or support matrix for the minimum switch firmware versions supported with that application release.
- This connectivity is also supported for the Brocade 7500 switch acting as a SAN router. EX ports can be configured on the Brocade 7500 for fibre channel routing.

EMC

For SAN Router support with the switches listed on this table, please see the SAN Router tables on E-Lab Interoperability Navigator.

- Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric. For additional information regarding how to count the number of hops in a fabric, refer to the EMC Networked Storage Topology Guide.
- Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- McDATA's "Open Fabric Mode 1.0" and Cisco's "Interopmode 1" are fully supported for McDATA and Cisco interop. Configurations consisting of McDATA's "McDATA Fabric Mode 1.0" and Cisco's "Interopmode 4" are supported when using EOS 9.7.2 and SAN-OS v3.3.1c, and also when using EOS 9.8.1 and NX-OS 4.1.1b. For support of interopmode with previous versions, submit an RPQ. For a complete list of known issues with McDATA and Cisco interop, see Primus case EMC147089.
- No Application Blades are currently supported in the 48000 when running in a heterogeneous switch interoperability environment.
- The maximum number of domains supported in Fabric is 24 with total ports available: 1280, maximum F_Ports devices: 1200, Minimum Fabric OS Version required: v 3.1.2a, v4.2.0b.
- The following Cisco and Brocade interopmode configurations are supported
Cisco's "Interopmode 1" and Brocade's "Interopmode (true)"
Cisco's "Interopmode 3" and Brocade's "Interopmode (false)" with Core PID enabled
Please note: Fabric Binding as well as any Brocade or Cisco security features are not supported.
Other feature limitations may apply.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The maximum number of domains supported in Fabric is 55 with total ports available: 2560, maximum F_ports devices: 2300, Minimum Fabric OS Version required: v5.1.0a.
- OEM equivalents of switches listed in this table are supported by EMC as long as the installed firmware and all other configuration parameters are in accordance with switches specified in this table.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPIV must be enabled for this switch
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- the configuration is customer instalable
- ECC discovery is supported.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- With the "Integrated Routing" feature enabled, this connectivity can be supported with either of the Brocade DCX, DCX-4S, 300, 5100, 5300 or their Connectrix-B series versions acting as a SAN router. EX ports can be configured on either one of these switches for fibre channel routing.
- An RPQ is required for any McData switches running in a Brocade FAP environment.
- The "Frame Redirect" feature cannot be enabled for this connectivity in a Recover Point set up with the 7600 acting as the intelligent switch. In an RP environment, all brocade switches on the data path must run FOS v5.3.0c and up if the "Frame redirect" feature is enabled. Thus, the Brocade 12000, 3200, 3800 or the Connectrix ED-12000B, DS-3200B, DS-3800B cannot be in the data path for "Frame Redirect" based configurations. This would also apply if the Scimitar or FC4-16AP application blade is used in an RP configuration instead of the 7600.
- For Invista or Recoverpoint with the AP-7600B or PB-48K-AP4-18 application blade, please refer to the specific application version release notes and/or support matrix for the minimum switch firmware versions supported with that application release.
- This connectivity is also supported for the Brocade 7500 switch acting as a SAN router. EX ports can be configured on the Brocade 7500 for fibre channel routing.

Fujitsu Ltd.

For SAN Router support with the switches listed on this table, please see the SAN Router tables on E-Lab Interoperability Navigator.

- Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric. For additional information regarding how to count the number of hops in a fabric, refer to the EMC Networked Storage Topology Guide.
- Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- McDATA's "Open Fabric Mode 1.0" and Cisco's "Interopmode 1" are fully supported for McDATA and Cisco interop. Configurations consisting of McDATA's "McDATA Fabric Mode 1.0" and Cisco's "Interopmode 4" are supported when using EOS 9.7.2 and SAN-OS v3.3.1c, and also when using EOS 9.8.1 and NX-OS 4.1.1b. For support of interopmode with previous versions, submit an RPQ.
For a complete list of known issues with McDATA and Cisco interop, see Primus case EMC147089.
- No Application Blades are currently supported in the 48000 when running in a heterogeneous switch interoperability environment.
- The maximum number of domains supported in Fabric is 24 with total ports available: 1280, maximum F_Ports devices: 1200, Minimum Fabric OS Version required: v 3.1.2a, v4.2.0b.
- The following Cisco and Brocade interopmode configurations are supported
Cisco's "Interopmode 1" and Brocade's "Interopmode (true)"
Cisco's "Interopmode 3" and Brocade's "Interopmode (false)" with Core PID enabled
Please note: Fabric Binding as well as any Brocade or Cisco security features are not supported.
Other feature limitations may apply.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The maximum number of domains supported in Fabric is 55 with total ports available: 2560, maximum F_ports devices: 2300, Minimum Fabric OS Version required: v5.1.0a.
- OEM equivalents of switches listed in this table are supported by EMC as long as the installed firmware and all other configuration parameters are in accordance with switches specified in this table.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPIV must be enabled for this switch
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- the configuration is customer instalable
- ECC discovery is supported.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- With the "Integrated Routing" feature enabled, this connectivity can be supported with either of the Brocade DCX, DCX-4S, 300, 5100, 5300 or their Connectrix-B series versions acting as a SAN router. EX ports can be configured on either one of these switches for fibre channel routing.
- An RPQ is required for any McData switches running in a Brocade FAP environment.
- The "Frame Redirect" feature cannot be enabled for this connectivity in a Recover Point set up with the 7600 acting as the intelligent switch. In an RP environment, all brocade switches on the data path must run FOS v5.3.0c and up if the "Frame redirect" feature is enabled. Thus, the Brocade 12000, 3200, 3800 or the Connectrix ED-12000B, DS-3200B, DS-3800B cannot be in the data path for "Frame Redirect" based configurations. This would also apply if the Scimitar or FC4-16AP application blade is used in an RP configuration instead of the 7600.
- For Invista or Recoverpoint with the AP-7600B or PB-48K-AP4-18 application blade, please refer to the specific application version release notes and/or support matrix for the minimum switch firmware versions supported with that application release.
- This connectivity is also supported for the Brocade 7500 switch acting as a SAN router. EX ports can be configured on the Brocade 7500 for fibre channel routing.

Fujitsu Technology Solutions

For SAN Router support with the switches listed on this table, please see the SAN Router tables on E-Lab Interoperability Navigator.

- Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric. For additional information regarding how to count the number of hops in a fabric, refer to the EMC Networked Storage Topology Guide.
- Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- McDATA's "Open Fabric Mode 1.0" and Cisco's "Interopmode 1" are fully supported for McDATA and Cisco interop. Configurations consisting of McDATA's "McDATA Fabric Mode 1.0" and Cisco's "Interopmode 4" are supported when using EOS 9.7.2 and SAN-OS v3.3.1c, and also when using EOS 9.8.1 and NX-OS 4.1.1b. For support of interopmode with previous versions, submit an RPQ. For a complete list of known issues with McDATA and Cisco interop, see Primus case EMC147089.
- No Application Blades are currently supported in the 48000 when running in a heterogeneous switch interoperability environment.
- The maximum number of domains supported in Fabric is 24 with total ports available: 1280, maximum F_Ports devices: 1200, Minimum Fabric OS Version required: v 3.1.2a, v4.2.0b.
- The following Cisco and Brocade interopmode configurations are supported
Cisco's "Interopmode 1" and Brocade's "Interopmode (true)"
Cisco's "Interopmode 3" and Brocade's "Interopmode (false)" with Core PID enabled
Please note: Fabric Binding as well as any Brocade or Cisco security features are not supported. Other feature limitations may apply.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The maximum number of domains supported in Fabric is 55 with total ports available: 2560, maximum F_ports devices: 2300, Minimum Fabric OS Version required: v5.1.0a.
- OEM equivalents of switches listed in this table are supported by EMC as long as the installed firmware and all other configuration parameters are in accordance with switches specified in this table.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPIV must be enabled for this switch
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- the configuration is customer instalable
- ECC discovery is supported.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- With the "Integrated Routing" feature enabled, this connectivity can be supported with either of the Brocade DCX, DCX-4S, 300, 5100, 5300 or their Connectrix-B series versions acting as a SAN router. EX ports can be configured on either one of these switches for fibre channel routing.
- An RPQ is required for any McData switches running in a Brocade FAP environment.
- The "Frame Redirect" feature cannot be enabled for this connectivity in a Recover Point set up with the 7600 acting as the intelligent switch. In an RP environment, all brocade switches on the data path must run FOS v5.3.0c and up if the "Frame redirect" feature is enabled. Thus, the Brocade 12000, 3200, 3800 or the Connectrix ED-12000B, DS-3200B, DS-3800B cannot be in the data path for "Frame Redirect" based configurations. This would also apply if the Scimitar or FC4-16AP application blade is used in an RP configuration instead of the 7600.
- For Invista or Recoverpoint with the AP-7600B or PB-48K-AP4-18 application blade, please refer to the specific application version release notes and/or support matrix for the minimum switch firmware versions supported with that application release.
- This connectivity is also supported for the Brocade 7500 switch acting as a SAN router. EX ports can be configured on the Brocade 7500 for fibre channel routing.

Hewlett Packard

For SAN Router support with the switches listed on this table, please see the SAN Router tables on E-Lab Interoperability Navigator.

- Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric. For additional information regarding how to count the number of hops in a fabric, refer to the EMC Networked Storage Topology Guide.
- Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- McDATA's "Open Fabric Mode 1.0" and Cisco's "Interopmode 1" are fully supported for McDATA and Cisco interop. Configurations consisting of McDATA's "McDATA Fabric Mode 1.0" and Cisco's "Interopmode 4" are supported when using EOS 9.7.2 and SAN-OS v3.3.1c, and also when using EOS 9.8.1 and NX-OS 4.1.1b. For support of interopmode with previous versions, submit an RPQ.
For a complete list of known issues with McDATA and Cisco interop, see Primus case EMC147089.
- No Application Blades are currently supported in the 48000 when running in a heterogeneous switch interoperability environment.
- The maximum number of domains supported in Fabric is 24 with total ports available: 1280, maximum F_Ports devices: 1200, Minimum Fabric OS Version required: v 3.1.2a, v4.2.0b.
- The following Cisco and Brocade interopmode configurations are supported
Cisco's "Interopmode 1" and Brocade's "Interopmode (true)"
Cisco's "Interopmode 3" and Brocade's "Interopmode (false)" with Core PID enabled
Please note: Fabric Binding as well as any Brocade or Cisco security features are not supported.
Other feature limitations may apply.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The maximum number of domains supported in Fabric is 55 with total ports available: 2560, maximum F_ports devices: 2300, Minimum Fabric OS Version required: v5.1.0a.
- OEM equivalents of switches listed in this table are supported by EMC as long as the installed firmware and all other configuration parameters are in accordance with switches specified in this table.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPIV must be enabled for this switch
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- the configuration is customer instalable
- ECC discovery is supported.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- With the "Integrated Routing" feature enabled, this connectivity can be supported with either of the Brocade DCX, DCX-4S, 300, 5100, 5300 or their Connectrix-B series versions acting as a SAN router. EX ports can be configured on either one of these switches for fibre channel routing.
- An RPQ is required for any McData switches running in a Brocade FAP environment.
- The "Frame Redirect" feature cannot be enabled for this connectivity in a Recover Point set up with the 7600 acting as the intelligent switch. In an RP environment, all brocade switches on the data path must run FOS v5.3.0c and up if the "Frame redirect" feature is enabled. Thus, the Brocade 12000, 3200, 3800 or the Connectrix ED-12000B, DS-3200B, DS-3800B cannot be in the data path for "Frame Redirect" based configurations. This would also apply if the Scimitar or FC4-16AP application blade is used in an RP configuration instead of the 7600.
- For Invista or Recoverpoint with the AP-7600B or PB-48K-AP4-18 application blade, please refer to the specific application version release notes and/or support matrix for the minimum switch firmware versions supported with that application release.
- This connectivity is also supported for the Brocade 7500 switch acting as a SAN router. EX ports can be configured on the Brocade 7500 for fibre channel routing.

Huawei

For SAN Router support with the switches listed on this table, please see the SAN Router tables on E-Lab Interoperability Navigator.

- Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric. For additional information regarding how to count the number of hops in a fabric, refer to the EMC Networked Storage Topology Guide.
- Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- McDATA's "Open Fabric Mode 1.0" and Cisco's "Interopmode 1" are fully supported for McDATA and Cisco interop. Configurations consisting of McDATA's "McDATA Fabric Mode 1.0" and Cisco's "Interopmode 4" are supported when using EOS 9.7.2 and SAN-OS v3.3.1c, and also when using EOS 9.8.1 and NX-OS 4.1.1b. For support of interopmode with previous versions, submit an RPQ. For a complete list of known issues with McDATA and Cisco interop, see Primus case EMC147089.
- No Application Blades are currently supported in the 48000 when running in a heterogeneous switch interoperability environment.
- The maximum number of domains supported in Fabric is 24 with total ports available: 1280, maximum F_Ports devices: 1200, Minimum Fabric OS Version required: v 3.1.2a, v4.2.0b.
- The following Cisco and Brocade interopmode configurations are supported
Cisco's "Interopmode 1" and Brocade's "Interopmode (true)"
Cisco's "Interopmode 3" and Brocade's "Interopmode (false)" with Core PID enabled
Please note: Fabric Binding as well as any Brocade or Cisco security features are not supported.
Other feature limitations may apply.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The maximum number of domains supported in Fabric is 55 with total ports available: 2560, maximum F_ports devices: 2300, Minimum Fabric OS Version required: v5.1.0a.
- OEM equivalents of switches listed in this table are supported by EMC as long as the installed firmware and all other configuration parameters are in accordance with switches specified in this table.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPIV must be enabled for this switch
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- the configuration is customer instalable
- ECC discovery is supported.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- With the "Integrated Routing" feature enabled, this connectivity can be supported with either of the Brocade DCX, DCX-4S, 300, 5100, 5300 or their Connectrix-B series versions acting as a SAN router. EX ports can be configured on either one of these switches for fibre channel routing.
- An RPQ is required for any McData switches running in a Brocade FAP environment.
- The "Frame Redirect" feature cannot be enabled for this connectivity in a Recover Point set up with the 7600 acting as the intelligent switch. In an RP environment, all brocade switches on the data path must run FOS v5.3.0c and up if the "Frame redirect" feature is enabled. Thus, the Brocade 12000, 3200, 3800 or the Connectrix ED-12000B, DS-3200B, DS-3800B cannot be in the data path for "Frame Redirect" based configurations. This would also apply if the Scimitar or FC4-16AP application blade is used in an RP configuration instead of the 7600.
- For Invista or Recoverpoint with the AP-7600B or PB-48K-AP4-18 application blade, please refer to the specific application version release notes and/or support matrix for the minimum switch firmware versions supported with that application release.
- This connectivity is also supported for the Brocade 7500 switch acting as a SAN router. EX ports can be configured on the Brocade 7500 for fibre channel routing.

IBM

For SAN Router support with the switches listed on this table, please see the SAN Router tables on E-Lab Interoperability Navigator.

- Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric. For additional information regarding how to count the number of hops in a fabric, refer to the EMC Networked Storage Topology Guide.
- Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- McDATA's "Open Fabric Mode 1.0" and Cisco's "Interopmode 1" are fully supported for McDATA and Cisco interop. Configurations consisting of McDATA's "McDATA Fabric Mode 1.0" and Cisco's "Interopmode 4" are supported when using EOS 9.7.2 and SAN-OS v3.3.1c, and also when using EOS 9.8.1 and NX-OS 4.1.1b. For support of interopmode with previous versions, submit an RPQ. For a complete list of known issues with McDATA and Cisco interop, see Primus case EMC147089.
- No Application Blades are currently supported in the 48000 when running in a heterogeneous switch interoperability environment.
- The maximum number of domains supported in Fabric is 24 with total ports available: 1280, maximum F_Ports devices: 1200, Minimum Fabric OS Version required: v 3.1.2a, v4.2.0b.
- The following Cisco and Brocade interopmode configurations are supported
Cisco's "Interopmode 1" and Brocade's "Interopmode (true)"
Cisco's "Interopmode 3" and Brocade's "Interopmode (false)" with Core PID enabled
Please note: Fabric Binding as well as any Brocade or Cisco security features are not supported.
Other feature limitations may apply.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The maximum number of domains supported in Fabric is 55 with total ports available: 2560, maximum F_ports devices: 2300, Minimum Fabric OS Version required: v5.1.0a.
- OEM equivalents of switches listed in this table are supported by EMC as long as the installed firmware and all other configuration parameters are in accordance with switches specified in this table.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPIV must be enabled for this switch
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- the configuration is customer instalable
- ECC discovery is supported.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- With the "Integrated Routing" feature enabled, this connectivity can be supported with either of the Brocade DCX, DCX-4S, 300, 5100, 5300 or their Connectrix-B series versions acting as a SAN router. EX ports can be configured on either one of these switches for fibre channel routing.
- An RPQ is required for any McData switches running in a Brocade FAP environment.
- The "Frame Redirect" feature cannot be enabled for this connectivity in a Recover Point set up with the 7600 acting as the intelligent switch. In an RP environment, all brocade switches on the data path must run FOS v5.3.0c and up if the "Frame redirect" feature is enabled. Thus, the Brocade 12000, 3200, 3800 or the Connectrix ED-12000B, DS-3200B, DS-3800B cannot be in the data path for "Frame Redirect" based configurations. This would also apply if the Scimitar or FC4-16AP application blade is used in an RP configuration instead of the 7600.
- For Invista or Recoverpoint with the AP-7600B or PB-48K-AP4-18 application blade, please refer to the specific application version release notes and/or support matrix for the minimum switch firmware versions supported with that application release.
- This connectivity is also supported for the Brocade 7500 switch acting as a SAN router. EX ports can be configured on the Brocade 7500 for fibre channel routing.

LangChao

For SAN Router support with the switches listed on this table, please see the SAN Router tables on E-Lab Interoperability Navigator.

- Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric. For additional information regarding how to count the number of hops in a fabric, refer to the EMC Networked Storage Topology Guide.
- Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- McDATA's "Open Fabric Mode 1.0" and Cisco's "Interopmode 1" are fully supported for McDATA and Cisco interop. Configurations consisting of McDATA's "McDATA Fabric Mode 1.0" and Cisco's "Interopmode 4" are supported when using EOS 9.7.2 and SAN-OS v3.3.1c, and also when using EOS 9.8.1 and NX-OS 4.1.1b. For support of interopmode with previous versions, submit an RPQ. For a complete list of known issues with McDATA and Cisco interop, see Primus case EMC147089.
- No Application Blades are currently supported in the 48000 when running in a heterogeneous switch interoperability environment.
- The maximum number of domains supported in Fabric is 24 with total ports available: 1280, maximum F_Ports devices: 1200, Minimum Fabric OS Version required: v 3.1.2a, v4.2.0b.
- The following Cisco and Brocade interopmode configurations are supported
Cisco's "Interopmode 1" and Brocade's "Interopmode (true)"
Cisco's "Interopmode 3" and Brocade's "Interopmode (false)" with Core PID enabled
Please note: Fabric Binding as well as any Brocade or Cisco security features are not supported. Other feature limitations may apply.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The maximum number of domains supported in Fabric is 55 with total ports available: 2560, maximum F_ports devices: 2300, Minimum Fabric OS Version required: v5.1.0a.
- OEM equivalents of switches listed in this table are supported by EMC as long as the installed firmware and all other configuration parameters are in accordance with switches specified in this table.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPIV must be enabled for this switch
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- the configuration is customer instalable
- ECC discovery is supported.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- With the "Integrated Routing" feature enabled, this connectivity can be supported with either of the Brocade DCX, DCX-4S, 300, 5100, 5300 or their Connectrix-B series versions acting as a SAN router. EX ports can be configured on either one of these switches for fibre channel routing.
- An RPQ is required for any McData switches running in a Brocade FAP environment.
- The "Frame Redirect" feature cannot be enabled for this connectivity in a Recover Point set up with the 7600 acting as the intelligent switch. In an RP environment, all brocade switches on the data path must run FOS v5.3.0c and up if the "Frame redirect" feature is enabled. Thus, the Brocade 12000, 3200, 3800 or the Connectrix ED-12000B, DS-3200B, DS-3800B cannot be in the data path for "Frame Redirect" based configurations. This would also apply if the Scimitar or FC4-16AP application blade is used in an RP configuration instead of the 7600.
- For Invista or Recoverpoint with the AP-7600B or PB-48K-AP4-18 application blade, please refer to the specific application version release notes and/or support matrix for the minimum switch firmware versions supported with that application release.
- This connectivity is also supported for the Brocade 7500 switch acting as a SAN router. EX ports can be configured on the Brocade 7500 for fibre channel routing.

McDATA

For SAN Router support with the switches listed on this table, please see the SAN Router tables on E-Lab Interoperability Navigator.

- Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric. For additional information regarding how to count the number of hops in a fabric, refer to the EMC Networked Storage Topology Guide.
- Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- McDATA's "Open Fabric Mode 1.0" and Cisco's "Interopmode 1" are fully supported for McDATA and Cisco interop. Configurations consisting of McDATA's "McDATA Fabric Mode 1.0" and Cisco's "Interopmode 4" are supported when using EOS 9.7.2 and SAN-OS v3.3.1c, and also when using EOS 9.8.1 and NX-OS 4.1.1b. For support of interopmode with previous versions, submit an RPQ.
For a complete list of known issues with McDATA and Cisco interop, see Primus case EMC147089.
- No Application Blades are currently supported in the 48000 when running in a heterogeneous switch interoperability environment.
- The maximum number of domains supported in Fabric is 24 with total ports available: 1280, maximum F_Ports devices: 1200, Minimum Fabric OS Version required: v 3.1.2a, v4.2.0b.
- The following Cisco and Brocade interopmode configurations are supported
Cisco's "Interopmode 1" and Brocade's "Interopmode (true)"
Cisco's "Interopmode 3" and Brocade's "Interopmode (false)" with Core PID enabled
Please note: Fabric Binding as well as any Brocade or Cisco security features are not supported.
Other feature limitations may apply.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The maximum number of domains supported in Fabric is 55 with total ports available: 2560, maximum F_ports devices: 2300, Minimum Fabric OS Version required: v5.1.0a.
- OEM equivalents of switches listed in this table are supported by EMC as long as the installed firmware and all other configuration parameters are in accordance with switches specified in this table.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPIV must be enabled for this switch
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- the configuration is customer instalable
- ECC discovery is supported.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- With the "Integrated Routing" feature enabled, this connectivity can be supported with either of the Brocade DCX, DCX-4S, 300, 5100, 5300 or their Connectrix-B series versions acting as a SAN router. EX ports can be configured on either one of these switches for fibre channel routing.
- An RPQ is required for any McData switches running in a Brocade FAP environment.
- The "Frame Redirect" feature cannot be enabled for this connectivity in a Recover Point set up with the 7600 acting as the intelligent switch. In an RP environment, all brocade switches on the data path must run FOS v5.3.0c and up if the "Frame redirect" feature is enabled. Thus, the Brocade 12000, 3200, 3800 or the Connectrix ED-12000B, DS-3200B, DS-3800B cannot be in the data path for "Frame Redirect" based configurations. This would also apply if the Scimitar or FC4-16AP application blade is used in an RP configuration instead of the 7600.
- For Invista or Recoverpoint with the AP-7600B or PB-48K-AP4-18 application blade, please refer to the specific application version release notes and/or support matrix for the minimum switch firmware versions supported with that application release.
- This connectivity is also supported for the Brocade 7500 switch acting as a SAN router. EX ports can be configured on the Brocade 7500 for fibre channel routing.

NEC

For SAN Router support with the switches listed on this table, please see the SAN Router tables on E-Lab Interoperability Navigator.

- Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric. For additional information regarding how to count the number of hops in a fabric, refer to the EMC Networked Storage Topology Guide.
- Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- McDATA's "Open Fabric Mode 1.0" and Cisco's "Interopmode 1" are fully supported for McDATA and Cisco interop. Configurations consisting of McDATA's "McDATA Fabric Mode 1.0" and Cisco's "Interopmode 4" are supported when using EOS 9.7.2 and SAN-OS v3.3.1c, and also when using EOS 9.8.1 and NX-OS 4.1.1b. For support of interopmode with previous versions, submit an RPQ. For a complete list of known issues with McDATA and Cisco interop, see Primus case EMC147089.
- No Application Blades are currently supported in the 48000 when running in a heterogeneous switch interoperability environment.
- The maximum number of domains supported in Fabric is 24 with total ports available: 1280, maximum F_Ports devices: 1200, Minimum Fabric OS Version required: v 3.1.2a, v4.2.0b.
- The following Cisco and Brocade interopmode configurations are supported
Cisco's "Interopmode 1" and Brocade's "Interopmode (true)"
Cisco's "Interopmode 3" and Brocade's "Interopmode (false)" with Core PID enabled
Please note: Fabric Binding as well as any Brocade or Cisco security features are not supported. Other feature limitations may apply.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The maximum number of domains supported in Fabric is 55 with total ports available: 2560, maximum F_ports devices: 2300, Minimum Fabric OS Version required: v5.1.0a.
- OEM equivalents of switches listed in this table are supported by EMC as long as the installed firmware and all other configuration parameters are in accordance with switches specified in this table.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPIV must be enabled for this switch
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- the configuration is customer instalable
- ECC discovery is supported.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- With the "Integrated Routing" feature enabled, this connectivity can be supported with either of the Brocade DCX, DCX-4S, 300, 5100, 5300 or their Connectrix-B series versions acting as a SAN router. EX ports can be configured on either one of these switches for fibre channel routing.
- An RPQ is required for any McData switches running in a Brocade FAP environment.
- The "Frame Redirect" feature cannot be enabled for this connectivity in a Recover Point set up with the 7600 acting as the intelligent switch. In an RP environment, all brocade switches on the data path must run FOS v5.3.0c and up if the "Frame redirect" feature is enabled. Thus, the Brocade 12000, 3200, 3800 or the Connectrix ED-12000B, DS-3200B, DS-3800B cannot be in the data path for "Frame Redirect" based configurations. This would also apply if the Scimitar or FC4-16AP application blade is used in an RP configuration instead of the 7600.
- For Invista or Recoverpoint with the AP-7600B or PB-48K-AP4-18 application blade, please refer to the specific application version release notes and/or support matrix for the minimum switch firmware versions supported with that application release.
- This connectivity is also supported for the Brocade 7500 switch acting as a SAN router. EX ports can be configured on the Brocade 7500 for fibre channel routing.

QLogic

For SAN Router support with the switches listed on this table, please see the SAN Router tables on E-Lab Interoperability Navigator.

- Switch Management Application Revision: Switch Management versions are backward compatible. You may manage any lower-level switch with a higher level Management Application Revision.
- Max # Hops: The maximum number of ISLs (Inter-Switch Links) a frame needs to traverse between any input port of the fabric to any output port, assuming all ISLs are active (no ISL or switch fault condition is present). This is the maximum number of hops in a fabric. For additional information regarding how to count the number of hops in a fabric, refer to the EMC Networked Storage Topology Guide.
- Max # of Domains per Fabric: The maximum number of switches a Fibre Channel fabric may contain under the current topology limitations.
- Switch Management Application Revision: The use of mixed code revisions in the same fabric should be limited to code upgrade processes only. You must always use the management code rev. associated with the highest level of switch code.
- McDATA's "Open Fabric Mode 1.0" and Cisco's "Intermode 1" are fully supported for McDATA and Cisco interop. Configurations consisting of McDATA's "McDATA Fabric Mode 1.0" and Cisco's "Intermode 4" are supported when using EOS 9.7.2 and SAN-OS v3.3.1c, and also when using EOS 9.8.1 and NX-OS 4.1.1b. For support of intermode with previous versions, submit an RPQ.
For a complete list of known issues with McDATA and Cisco interop, see Primus case EMC147089.
- No Application Blades are currently supported in the 48000 when running in a heterogeneous switch interoperability environment.
- The maximum number of domains supported in Fabric is 24 with total ports available: 1280, maximum F_Ports devices: 1200, Minimum Fabric OS Version required: v 3.1.2a, v4.2.0b.
- The following Cisco and Brocade interopmode configurations are supported
Cisco's "Intermode 1" and Brocade's "Intermode (true)"
Cisco's "Intermode 3" and Brocade's "Intermode (false)" with Core PID enabled
Please note: Fabric Binding as well as any Brocade or Cisco security features are not supported.
Other feature limitations may apply.
- Dell offers the following versions of the DS-220B-FF-D switch: DS-210B-DE and DS-210B-DEU. Please reference the Dell website for further information.
- The maximum number of domains supported in Fabric is 55 with total ports available: 2560, maximum F_ports devices: 2300, Minimum Fabric OS Version required: v5.1.0a.
- OEM equivalents of switches listed in this table are supported by EMC as long as the installed firmware and all other configuration parameters are in accordance with switches specified in this table.
- This switch is offered by Dell as the Brocade VL2 LC.
- NPIV must be enabled for this switch
- This switch module is supported in both legacy switch module position (bay 3 or 4) of all IBM BladeCenter chassis' and when installed in the IBM Multi-switch Interconnect Module for IBM BladeCenter (39Y9314), in bays 8 and 10 in the IBM BladeCenter H chassis.
- HP Part number AE373A is 12 port upgrade license for Brocade 4/12 SAN Switch.
- the configuration is customer instalable
- ECC discovery is supported.
- When this 8Gb Brocade embedded module is directly attached to an 8Gb EMC target, the port on the embedded module must be configured to use "IDLE" as the fill word for the connectivity to be established. This can be done by running the "portcfgfillword <port number> 0" command for the port in use on the module.
- With the "Integrated Routing" feature enabled, this connectivity can be supported with either of the Brocade DCX, DCX-4S, 300, 5100, 5300 or their Connectrix-B series versions acting as a SAN router. EX ports can be configured on either one of these switches for fibre channel routing.
- An RPQ is required for any McData switches running in a Brocade FAP environment.
- The "Frame Redirect" feature cannot be enabled for this connectivity in a Recover Point set up with the 7600 acting as the intelligent switch. In an RP environment, all brocade switches on the data path must run FOS v5.3.0c and up if the "Frame redirect" feature is enabled. Thus, the Brocade 12000, 3200, 3800 or the Connectrix ED-12000B, DS-3200B, DS-3800B cannot be in the data path for "Frame Redirect" based configurations. This would also apply if the Scimitar or FC4-16AP application blade is used in an RP configuration instead of the 7600.
- For Invista or Recoverpoint with the AP-7600B or PB-48K-AP4-18 application blade, please refer to the specific application version release notes and/or support matrix for the minimum switch firmware versions supported with that application release.
- This connectivity is also supported for the Brocade 7500 switch acting as a SAN router. EX ports can be configured on the Brocade 7500 for fibre channel routing.
