EMC's Policies and Requirements for EMC Support Matrix

EMC's Support Matrix Policies and Requirements

This section describes EMC's policies and requirements for the EMC Support Matrix document.

Purpose and Limitations of this Document

This document is being provided for informational purposes only and may change at any time. This version supersedes and replaces all previous versions. The information is to serve only as a guide for those configurations/products which EMC has qualified. The information in this document is a subset of the information that can be found on the E-Lab Interoperability Navigator tool which is available for all EMC personnel, customers and partners. The E-Lab Interoperability Navigator site may be reached at <http://elabnavigator.emc.com>.

The information included in this document is intended as a guide in the configuration of systems for EMC's products. It is not intended to be the sole resource for system configuration. For more information or answers to questions not found in this document, please see EMC's website, other EMC documentation, such as EMC's Host Connectivity Guides, EMC Networked Storage Topology Guide, EMC CLARiiON Open Systems Configuration Guide, relevant vendor documentation, or contact your EMC Sales or EMC Customer Service representative.

For Symmetrix 4.x support, please look at the Symmetrix 8000 Series section and check the footnotes for model/microcode compatibility. EMC employees can obtain older revisions of ESM containing more Symmetrix 4.x information from the Symmetrix Service Readiness group.

For a complete listing of any known issues with the current support matrix content, please review the ESM Errata on E-Lab Interoperability Navigator. To report any issues with the content contained within the support matrix, follow the steps documented on the Contacts link on E-Lab Interoperability Navigator. E-Lab Interoperability Navigator can be reached at <http://elabnavigator.emc.com>.

Policies for Qualifying Systems

Policies and procedures for support of EMC products are set forth in the customer's applicable agreements. EMC's publication of information relating to system configurations covers only those outlined in this document or by approval from EMC Engineering. Other system configurations not found in this document are not qualified without EMC Engineering approval. EMC has qualified hardware and software provided only by the vendors listed in this document, and host systems, hardware and software from other vendors are not qualified, and may never be. Please contact your EMC Sales or EMC Customer Service representative for updates or information not included in this document.

EMC maintains a large collection of the products listed above as well as third-party application software for qualification with EMC's storage systems and to simulate customer environments, but you must consult the vendors for information about their system internals, such as hardware and associated drivers.

Policy for Future Qualification of Operating System Software Releases

The information in this document is maintained by EMC and EMC strives to update this document with new releases of hardware, operating systems, firmware, BIOS, switch software, etc., as they become available from the vendors. EMC works with the vendors during their development and release processes in order to be fully informed at the time the vendors release new versions. EMC does not announce qualification prior to vendors' General Availability. In some cases, EMC may choose to perform regression testing following the vendors' GA; in these cases and in cases where advance preparation is not possible, EMC may validate and qualify vendors' products as appropriate after they have been released. For early support of such products, including vendor beta participation, contact your EMC Sales or EMC Customer Service representative.

Policy for End-of-Life Support

EMC strives to continue support for any installed platforms, but may remove support from this host matrix for new installations within three months after the vendor has announced that this platform has reached the end of life. EMC will continue support for existing installations of hardware, operating systems, and components that the vendor has officially declared to have reached end of life as long as support is available from the vendor. For the full list of EMC product end of life and end of support, please see the "Release and End of Life Dates" pages on the Support section of Powerlink.

1. Fcode should be loaded on all HBA's at the time of initial installation. This should only be done before configuring devices, and should not be done after devices are configured. If HBA does not contain Fcode and Fcode is loaded after devices are configured, the device paths will change and this could result in loss of data.
2. For Solaris 10 versions prior to S10-U1, there are 2 packages SUNWemixs and SUNWemixu that are required before installing required patch 120222-04. These packages are available on the Sun website: <http://www.sun.com/download/products.xml?id=42c4317d>

- Supports S10_x86 Update 8 (10/09)
- EMC supports ZFS in Solaris 10_x86 11/06 (update 3) or later. The Snapshot and Clone features of ZFS are supported only through Sun Microsystems.
- Minimum supported version.
- There is only one Solaris; however, Fujitsu customers must obtain Solaris media, Solaris patches, and Solaris support from their regional Fujitsu support provider. Fujitsu provides Solaris patches in a convenient package called PTF. Fujitsu recommends customers install the latest PTF: version R10111. Fujitsu and EMC recommend as a best practice that customers also upgrade to the most recent Solaris 10 patch cluster, available from Fujitsu's regional support providers.
- Solaris 10 x86 support with PRIMERGY servers requires a Special Release from Fujitsu Technology Solutions.
- For Sun MPxIO support please review the 'Sun StorEdge Traffic Manager for CLARiiON Release Notes (P/N 300-002-978)' available via EMC PowerLink.
- Must add "set sd:sd_io_time=60" and "set sd:sd_max_throttle=20" in the /etc/system file for Symmetrix or CLARiiON attach. Do not include quotes on the entries.
- The minimum Storage Operating Environment for the AX4-5 array is Flare 2.23.050.5.004
- SNIA HBA API Supported.
- FSC Fibre Channel module. Dual channel 4Gbit/s HBA for BX6xx-series blade servers only.
- FSC Fibre Channel module. Dual channel 2Gbit/s HBA for BX6xx-series blade servers only.

44. Driver Version 2.40a3 SCSI FC Port driver. EMC recommends using STORPort drivers where available. As of 2.40a2 Microsoft will no longer allow the Emulex Port Driver to be used in any HCT LOGO solution or block submissions. The Port driver is still digitally signed, but STORPort drivers will be required for all new HCT LOGO solution and block submissions. END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003.

83. Driver Version 2.40a3 SCSI FC Port driver. EMC recommends using STORPort drivers where available. As of 2.40a2 Microsoft will no longer allow the Emulex Port Driver to be used in any HCT LOGO solution or block submissions. The Port driver is still digitally signed, but STORPort drivers will be required for all new HCT LOGO solution and block submissions. END OF LIFE NOTICE: SCSI miniport and SCSI full port drivers are frozen and EOL at this time for Windows 2003 operating systems. EMC recommends migrating to the currently supported STORPort driver for your HBA. EMC will continue to support existing customers who have Windows 2003 SCSI drivers installed, but any fixes or HCL support will require an upgrade to STORPort. Refer to SalesAdvantage articles for the benefits of using STORPort drivers and information on migrating from SCSI to STOR under Windows 2003. SCSI drivers listed in the April 2006 ESM will be the last supported SCSI drivers for Windows 2003.
